the public attention to their arrangements for the holiday season, and an examination of their A B C programme demonstrates that this enterprising company has done everything possible to provide for the holiday traveller. For those wishing to visit the bracing health resorts on the North-East coast tickets are announced every Saturday during the season, covering a period from three to seventeen days, for 17s. to Cleethorpes, or 21s. to Scarborough and Filey. Similar tickets are issued to the West Coast watering-places, viz. to Southport and Liverpool for 19s., to Blackpool, Lytham, St. Anne's and Fleetwood for 21s., and to Douglas (Isle of Man) for 23s. 6d. and 27s. 6d. Every Thursday cheap tickets for sixteen days are obtainable to all the principal health and pleasure resorts in Ireland. Cheap tickets are also issued every Saturday for three, six or eight days to over 200 towns and places in the Midlands, Yorkshire, Lancashire and North of England. In the majority of cases the fare for an eight days' ticket is less than a sovereign. Such low fare tickets are, however, not offered to the detriment of comfortable and expeditious travel, as passengers are allowed to perform the journey by express trains composed of up-to-date corridor stock, and a buffet car is attached for the provision of meals on the train at a most reasonable tariff. For those desirous of spending a pleasant day or week-end in the country facilities are announced suitable for all tastes. There are day and half-day excursions to many delightful spots in Herts and Bucks, and for the pedestrian and cyclist over forty tours have been arranged, many of them covering fresh ground now accessible by the opening of the new suburban line into Buckinghamshire. Lovers of Shakespeare are given the opportunity of visiting Stratford-on-Avon three days a week at a special inclusive fare. For the modest sum of 14s. the journey to Stratford is covered, including two drives, luncheon and dinner. Every Friday and Saturday week-end tickets, available by any ordinary train, are issued to all the inland and seaside holiday resorts, extending from the Midlands to the north of Scotland. These arrangements are conveniently tabulated in the form of an A B C excursion programme, obtainable, free of cost, at Marylebone station, N.W., or at any of the company's town offices and agencies situated throughout London and suburbs.

These journals have the largest circulations, and are the recognised Organs of the Boot and Shoe Trade.

THE

LLANGOLLEN ADVERTISER,

Denbighshire,

Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years, has a very large and influential circulation throughout North Wales. Being conducted entirely on neutral principles, it finds its way into families of all classes. As it is also the only paper printed and published in this district, it offers peculiar advantages to advertisers.

HUGH JONES, Castle Street, Proprietor.

SOUTH WALES DAILY NEWS.—Pre-eminent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

SOUTH WALES ECHO.—Eight editions daily, 36 columns, 1d. One of the largest and most attractive evening papers in the provinces. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together.—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

CARDIFF TIMES (Weekly, 1d.)—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2d. to a 1d. paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

ARCHITECTURE, FURNISHING, DECORATION, FINE ARTS.

E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM. From the water-colours of JEAN BAES. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable towers and charming turrets, so justly considered of the greatest interest. This work consists of 50 coloured folio plates, difficult to distinguish from the originals, mounted on handsome card-board and contained in a rich portfolio. Price £4.

TRAVAUX D'ARCHITECTURE EXECUTÉS EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM. By HENRY BEYER, Architect. This work contains the most interesting productions of Henry Beyers, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in two portfolios. Price complete, £14 8s.

L'EMULATION.

A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, héliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

TRADE NOTES.

HERR CARL FLOHR, who obtained the Grand Prix for lifts at the Paris International Exhibition of 1900, has opened offices at 73, Queen Victoria Street, E.C. His lifts are known throughout Germany, for they are installed in hotels, railway stations, hospitals and mansions. The Germans are advanced in their ironwork, and the cages are

remarkable examples of applied art. The London manager is Mr. H. H. Dignowity.

WE have received from The London Drawing and Tracing Office, 98 Gray's Inn Road, W.C., a little work entitled "Models," compiled by Mr. John B. Thorp. The opening paragraph in this little book best explains the nature of it. "There are times when an architect or surveyor is called upon to produce a model of some building, &c., perhaps at a moment's notice, either for a law case, or placing before a committee or client." Mr. Thorp has illustrated some of the principal models which have been entrusted to him to make from time to time, and the whole has been prepared in a careful manner, well printed and illustrated, thus making this a useful work of reference in an architect's office.

VELURE.

THE customary use of language compels every one to believe that in most cases when a glossy surface is produced it is the result of an application of varnish. In other words, it is believed that a varnished surface is the result of two processes—painting and varnishing. In that way glossiness is expensive, and it is no wonder that so many people have set themselves against it, owing, no doubt, to the expense. When, therefore, a paint which by itself, without other aid, can produce a surface which has all the appearance of being varnished, the novelty is such that there is no word in the English language to describe it. Messrs. Chancellor & Co. have therefore to invent a name for their paint, and call it Velure. It is, as they say, a perfect Japan paint, and supersedes varnish, but the makers of our language, not being prophets, could not provide for it a sufficiently descriptive name. If the testimony of contractors and others who have used it is of account, there is no doubt that it is adapted for the finest class of work. It is enduring, and it is economical in application. It has been used at Windsor Castle, Sandringham, Osborne House, the Houses of Parliament and in Royal and other yachts. The manufacturers say it is worth trying, and those who take their advice are likely to agree that in their descriptions they have not overstated the qualities of Velure.

THE SANITARY INSTITUTE AT BRISTOL.

THE twenty-third Autumn Congress of the Royal Sanitary Institute was officially welcomed by the Lord Mayor of Bristol on Monday at the Council House. He subsequently went on to the Drill Hall in order to open a health exhibition held in connection with it. The awards, which were announced by Mr. H. D. Searles-Wood, chairman of the judges of the exhibition, included five silver medals and thirty-six bronze medals. It was announced that the exhibits at nine of the stalls would be subjected to further consideration before an award was made. The judges were Mr. H. D. Searles-Wood, Mr. Henry Adams, Dr. P. Boobyer, Mr. H. P. Boulnois, Mr. T. W. Cutler, Mr. E. T. Hall, Colonel J. Lane Notter, Dr. L. C. Parkes, Dr. G. Reid, Mr. Osborne Smith, Mr. W. C. Tyndale and Mr. J. E. Willcox.

The number of the exhibitors rendered it necessary that the east and west halls should be utilised, in addition to the main building and the corridor. There are four divisions in the classification of exhibits. Division A comprises science in relation to hygiene. Division B is hygiene of special classes, trades and professions. Division C (construction and sanitary apparatus) is subdivided into three classes, viz. (1) building materials, construction and machinery; (2) water supply and sewerage; (3) heating, lighting and ventilating. Division D relates to personal and domestic hygiene.

The few exhibits that are shown under A division have no practical interest for our readers, who are chiefly concerned with C and D. Under B come Wilson & Stockall, who show in the corridor a patent brougham ambulance and a motor ambulance to accommodate two patients with attendants. Adjoining them are the Bristol Waggon and Carriage Works Company, Ltd., with a new improved street watering van and new patent tipping dust van. Constable & Son have house refuse tip vans with sanitary coverings and wind-guards combined, and a street-orderly truck with sanitary cover-lids. Cochran & Co. show diagrams of their system for utilising waste gases from furnaces, and models of their vertical multi-tubular boilers. Three machines in

operation represent E. Bennis & Co., Ltd.—one a smokeless chain grate stoker, another a machine stoker, and the third a smokeless coking stoker. A full-size and completely equipped indiarubber padded room is something of a novelty for the vast majority of visitors to the Drill Hall. The one shown by Pocock Bros. must be taken as the latest development of that class of production, for it was awarded a silver medal. The features which have won this distinction are the lead gutter running round the bottom, the shutter, the special door hinge, which renders crushed fingers impossible, and the door bolts. A steam-oven for use in bakeries has been set up by Messrs. T. Collins & Co., who are manufacturers in Bristol. W. B. Haig & Co., Ltd., have their "Epicycle" chain mortising machine, and a square hollow chisel apparatus for attachment, which are practically novelties. The special feature is the use of an epicycle train of wheels for driving the chain sprocket.

As we have already remarked, the two most important divisions are C and D. The first in the former class, seen on entering from the street, is the "Safety" Water Elevator Company, with Jonet's patent well gear, which received a bronze medal. It claims attention on sanitary grounds, for the iron cover prevents any animal, foreign or vegetable matter getting into the well. The open dome of the cover and the spout are lined with a sheet of perforated metal. For these reasons it should be especially serviceable in tropical climates, where mosquitos and other insects are proved to have a partiality for wells. Caink's patent jets and sprinklers for attachment to street watering carts are shown by the makers, the Nevile Engineering Company, Ltd. The two types shown can give three degrees of spray, viz. a fine, a medium and a heavy spray. Mr. Caink, the patentee, as city engineer of Worcester, must know by experience of the requirements for street-watering purposes. He has also devised sewer ventilators and a hydro-pneumatic sludge lift. An automatic flood trap of universal applicability that will repay careful inspection is shown for the first time, we believe, by Murray & Co., of Preston. The contrivance is so

simple and the whole exhibit occupies such a little space that it runs the risk of being overlooked. The gully near its inlet

and directly below the grid is fitted with two metal rings, and one of indiarubber is placed between them. The metal rings are fixed to the gully by bolts and nuts. Below is a copper ball float (whose diameter is larger than the opening in the rings, which is still further reduced by the rubber) resting on the surface of the water. The feature of the patent is that when the water in the drains cannot for any reason flow away quickly enough, the ball is lifted by the rising water to the rubber between the metal rings, and there it stops, being too large to go through, as shown above, and thereby sealing the gully entrance and preventing the water overflowing into adjacent premises. When the water subsides the ball drops. The gully can be fixed without touching the drains, and cleaned out without moving anything. The indiarubber is replaced by merely unscrewing the rings. The simplicity of the idea must commend itself to all who inspect the contrivance. Mr. G. P. Milnes, civil engineer, has invented and shows a flushing apparatus to discharge at various intervals, and two other apparatus, all of which work automatically. Sanitary fittings under many important forms are shown by John Knight & Sons, patentees and manufacturers, including their patent iron drain fittings and covers, which have non-detachable gun-metal fastenings. The covers are intended to be fixed over

gullies receiving wastes from bath-room, sink, &c., where it is often objectionable to leave them open. On the next stand Wm. Harriman & Co., Ltd., have a large number of Barron's patents, which include water-waste preventers, w.-c. connecting cones, "anti-foul" gully channel bends for manholes (which received a bronze medal), traps, range taps, &c. A working model has been brought to show the Newham false floor tiles, glazed and unglazed, as used for ventilating and draining bacterial filters and contact beds. The perforated tiles, which are laid on concrete, interlock and stand 3 inches from the ground. Special tiles are made to fit round circular spaces. Flushing tiles are inserted so that the concrete floor below may be thoroughly washed. Three of the exhibits of John Jones, Chelsea, relate to hospitals. There are also closets, interceptors, manhole covers, a cast-iron inspection chamber with low level cover and a large number of other specialties.

Heenan & Froude, Ltd., have elected to be represented by their refuse destructors. They atone for the exigencies of the limited space by showing a front of one of their cells which is reinforced by photos and plans of destructors which they have erected at home and abroad. Of course, the firm have in addition bridge, roof and constructional steelworks, and also works for making colliery and mechanical draught plant, &c., each being distinct from the others. The results of official tests at King's Norton, Birmingham, Worthing, Burslem, Dublin and elsewhere, bear witness to the satisfactory results obtained from "Heenan" destructors. As a silver medal was awarded for the centrifugal dust catcher of the Horsfall Destructor Company, Ltd., it is to that feature that most attention will be drawn. To demonstrate its complete application they provide a model of their "back-fed" and "top-fed" types of destructors. As a large amount of fine dust is contained in all town refuse great care has to be taken to prevent it being sent up the chimney. We could not do better than quote the description given in a joint report by Lord Kelvin and Professor A. Barr on a dust catcher supplied by the Horsfall Company to a destructor of another make at Edinburgh, in consequence of law proceedings compelling the Corporation to put a stop to a nuisance in the form of noxious gases and dust coming from the chimney. The report says:—

"The principal feature of the plant as it now stands is a

Unrivalled Stock of Fireclay, Urinal and Lavatory Ranges, Special Sinks, Pedestal Closets.

Architects are specially invited to inspect our large
— Show Rooms. —

dust-collector, patented and constructed by the Horsfall Company. It consists of a circular brickwork building about 16 feet internal diameter and 12 feet internal height, lined throughout with firebrick. In the centre of this is built an inner cylindrical chamber, 5 feet 8 inches internal diameter, communicating with the surrounding annular space through arched openings at the top of the separating wall. The main flue from the destructors enters the annular chamber tangentially at the bottom, so that the gases have to pass around and upwards through the annular space before they enter the central chamber, from the bottom of which again they pass off to the boiler or to the by-pass flue as desired. The annular chamber is partially obstructed by the entering flue, the by-pass flue, the boiler flue and a rake passage communicating with the central chamber; the spaces between these obstructions form pockets in which the dust, carried outwards by centrifugal action from the whirling gases, may be quietly deposited. Each of the pockets is provided with a cleaning door, through which the dust may be drawn.

"At our request Mr. Cooper, the city engineer, caused the dust intercepted during the week ending March 13, 1898, to be measured and found it to be in bulk 53 cubic feet. This may serve at once to indicate the efficiency of the design and the need for such an appliance in the case of Edinburgh, where the refuse is collected dry every day and is very light and dusty in character." The large destructor at Brussels is similarly provided. Messrs. Hughes & Stirling are another firm attracting notice to their dust destructors. They have sent a one-twelfth scale model of a "Sterling" destructor of two cells, complete with boiler, flues, dust-catcher and chimney.

Wm. M. Glover & Sons have three exhibits. The two that won silver medals are the "Warwick" street-washer and sprinkler, and their covered dust-van. The sprinkler (for which a patent has been applied) had a width of spread from 3 feet to 22 feet, and the fine, medium or full spread can be used at any width. It may be fitted to vans already in use. The driver has merely to touch a lever in order to use the flusher, which is especially useful for cleansing gullies, &c. The claims for their new dust-van are lightness, durability and simplicity. There are no bows or

levers at the back to hinder the contents from being shot out of the van. It is equipped with movable iron covers.

Interesting builders' ironmongery is shown by W. & R. Leggott, Ltd. There are various varieties of roof and lantern light openers. The Rojon door-spring sets out to improve upon the old-fashioned forms which have been responsible for many unpleasant moments to unwary people who did not expect the forcible return jerk. The Rojon is worked on a pneumatic piston, which renders such terrors impossible. Their panic bolts for buildings where people congregate are obviously successful. The British Challenge Glazing Company are content to offer a small model for examination.

By an ingenious disposition of their stand Candy & Co., Ltd., are able to show some ten varieties of the "Devon" fireplaces, which were so successful in the tests of open domestic grates conducted by the Smoke Abatement Society and H.M. Office of Works, and which have received the hall-mark of the Sanitary Institute. They are manufactured with fireclay backs, the glazed bricks, &c., and kerbs being made to match. C. W. Outram & Co. rely mainly on the "Hassall" w.-c. suites, with patent flushing rim, with 1½-gallon and 2-gallon flush. The "Hassall" closet was to the best of our memory first awarded a bronze medal in 1902. The tests then made by the judges included placing in the pan shavings, dish cloths, coloured water and paper. In every case the contents were entirely swept out by the first flush by the use of 1½ gallons of water. They have again the satisfaction of receiving a similar medal. School closets are a speciality at the Excelsior Potteries, near Burton-on-Trent, where Messrs. Outram manufacture their goods. It is of a strong fireclay with leadless glazing. The 1½ gallons flush meets all requirements. The general quickening in the demands of education authorities for faultless sanitary arrangements in schools should bring this closet into well-deserved prominence. There are in addition fireclay fittings for hospitals and domestic use. At a time when the open-air cure might almost be described as fashionable the arrival of a contrivance like the Alfred Williams "Hygienic" out-of-door room is opportune. The material is Navy duck, which cannot catch fire. It is fastened by cording to the revolving platform underneath and to a wooden framework forming the sides. It is possible to

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

* * As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

THE *Iron Age* (New York) publishes the following statistics, collected by the American Iron and Steel Association, of the production of iron and steel structural shapes in the United States in 1905. These statistics include the production of beams, beam girders, tee bars, tees, channels, angles and other structural forms, but they do not include plates or girders made from plates. The total production of strictly structural shapes in 1905 was 1,660,519 tons, against 949,146 tons in 1904—an increase of 711,373 tons, or over 74.9 per cent. The production of 1905 was much the largest ever turned out in one year. The next largest production was in 1902, when an output of 1,300,326 tons was attained, falling to 1,095,813 tons the next year, and to 949,146 tons in 1904. Of the total production in 1905 about 1,648,889 tons were rolled from steel, and about 11,630 tons from iron, against about 941,127 tons from steel and about 8,019 tons from iron in 1904.

MARPEDO WHITE JAPAN

SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

AIRD & SON, Wigton (*accepted*).

TRADE NOTES.

THE whole of the railings and gates to be found at the Argyle Motor Works were supplied by Mr. David M. Tyre, architectural smith and art metalworker, 12 Orr Street, Glasgow. By an oversight his name was printed last week as "Mr. Ure." But the error could not cause much inconvenience, as Mr. Tyre is a recognised specialist for such work in the North.

THE directors of John Oakey & Sons, Ltd., have declared an interim dividend on the ordinary shares for the six months ending June 30 at the rate of 10 per cent. per annum, payable on Saturday, September 1.

MESSRS. JOYCE, Whitchurch, Salop, have just completed the fixing of a large quarter clock and carillon at Glandford Church, Norfolk, and also a striking clock at Drayton Bassett Church, Tamworth. The same firm have a very large quarter clock in hand for India, and two similar ones for the colonies.

WE have received some samples of the pens manufactured by Messrs. Joseph Gillott & Sons, of London and Birmingham. In these days, when everyone writes, the question of pens is an all-important one, and there are few people who would not be interested in a pen which exactly suited their handwriting. The suiting of the many idiosyncrasies which govern penmanship is the keynote of Messrs. Joseph Gillott & Sons' business. They claim, and rightly, that amongst the hundreds of varieties which are turned out, one pen at least in the list will suit the most exacting hand.

IN the deplorable motor-omnibus accident at Handcross Hill it would appear that only one of the killed, Mr. Francis, was insured with the Railway Passengers' Assurance Company. It is certainly strange that in an age when the daily papers are constantly reporting more or less serious accidents so few people take advantage of the liberal policies of the company insuring against accidents of all kinds. Mr.

Gladstone recently stated in Parliament that 956 accidents in connection with motor vehicles occurred in May alone in the metropolitan area, and this without including the tram-car accidents. It should be borne in mind that it is not merely the passengers who suffer; pedestrians also stand the chance of being killed or injured.

A NEW DRAIN-TESTING PLUG.

ONE of the novelties shown at the Public Health Exhibition at Bristol (which was opened last week and which closes on the 21st) was a Smith's Patent Combined Drain-Testing Plug. The section here given will show the main principles. A is the emptying tube (cast in one piece with inner plate); by this arrangement the cap-nut at end of tube need never be unscrewed, except for emptying drain after the test. B is

a wing-nut threaded on to a $\frac{1}{2}$ -inch bolt, the pressure being borne by a sleeve tube fitted over the bolt, and bearing the tightening pressure from wing-nut to face of plug. C to C is the ordinary rubber ring which expands under the tightening pressure. D to D is the additional rubber ring (detachable) fixed over the rubber (when not under pressure), then by tightening the plug the two rubbers expand together, making it into a 6-inch plug. The plug is quite light and easily portable, being very compact.

THE "DRAWWELL" GRATE

WAS PLACED

First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

J. & R. CORKER, Ltd.,

GENERAL IRONFOUNDERS, Ferham Works, ROTHERHAM.

London Showrooms, Saracen's Head Buildings, Snow Hill, City,

W. B. OLARKE, Agent.
where the "Drawwell" can be seen in action.

ELECTRIC NOTES.

THE Gloucester County Council have agreed to subscribe 20,000l. towards the construction of a light railway from Fairford to Cirencester.

THE electric light has been introduced at the Beauchamp Tower (the old State prison) in the Tower of London, and at the Jewel or Wakefield Tower. Hitherto neither of them has been lighted.

THE electric trams at Chester have proved a great success. The Corporation have therefore decided to extend to the suburbs of Boughton, and work will be immediately commenced.

THE telephones committee of the Glasgow Corporation have recommended that an offer of the Government to purchase the telephone system for 305,000l. be accepted. The Corporation spent upwards of 360,000l. in the establishment of the system.

At the last meeting of the King's Norton District Council a formal resolution for the acquisition of the Moseley and King's Heath tramways within the Council's district was passed. The purchase price is 26,000l., and it is estimated that the electrification of the lines and the other attendant expenses will cost the Council about 40,000l.

THE *African World* publishes further particulars of the projected great central electric power station for South Africa, for which purpose it is proposed to utilise the natural energy of the Victoria Falls. This is to be transmitted over an exceptionally long distance, the current serving many parts of South Africa, though special regard will be had to Johannesburg and the Rand industries.

THE traffic revenue of the Glasgow tramways for the year was 813,768l. 11s. 1d., and 7,170l. 3s. 6d. of other receipts brought up the total income to 820,938l. 14s. 7d. The working expenses (excluding depreciation) amounted to 456,268l. 19s. 2d., leaving a balance to be carried to net revenue account of 364,669l. 15s. 5d., in addition to which there was 4,745l. 6s. 9d. of interest on surplus revenue, making a total of 369,415l. 2s. 2d.

THE Chief Inspector of Factories and Workshops has published his report for 1905. The electrical inspector, in dealing with the dangers of persons in electrical works and

power stations, mentions a passage-way of 2 feet wide in which "the penalty for not walking straight was probably sudden death." The switches were so arranged on either side that the attendant, by the slightest error or slip, was exposed to the peril of his life.

HIS Majesty's Consul at Fiume (Mr. G. L. Faber), in his report on the trade of that port for 1905, remarks that the municipality has under consideration a scheme for the erection of a large electrical plant for the supply of electricity for industrial and domestic purposes at a small cost to consumers. Water-power will supply something like 10,000 horse-power for the purpose at an initial cost of from 40,000l. to 50,000l., and the work is to be carried out within the next two years.

THE Deptford surveyor reports that an arc lamp gives a light of 2,000 candle-power; the cost is 1d. per unit, and the cost of maintenance, recarboning, &c., equals 6l. 10s. per annum. The total cost for an arc lamp yearly would be about 16l. On the other hand, the incandescent gas lamps on the main roads cost 3l. 5s. 4d. per annum, so that approximately five road lamps could be erected and maintained at the same cost as one arc lamp. The ordinary street incandescent lamps cost 2l. 9s. 2d. per annum, six and a half being equal to one arc lamp.

THE Town Council of Carlisle are seeking authority to borrow 6,070l. for extension of the electricity works, and which would be expended on a battery (260 cells), 2,450l.; reversible booster, 400l.; motor generator, 400l.; switch-board and connections, 550l.; buildings, 900l.; spare armatures, 250l.; two ventilating fans, 50l., making 5,000l., to which 10 per cent. was added for contingencies, increasing the cost to 5,500l. The remaining 570l. represents capital already expended on machinery, arc lamps, &c.

THE Erdington District Council have come to an agreement with the Aston Manor Corporation for the supply by the latter of electrical energy for traction purposes in the district of Erdington. One of the principal terms is that Aston Manor will supply Erdington with electrical energy for traction purposes at 1½d. per B.T.U., Erdington Council, on their part, to take a supply from the Corporation for a term of twenty-one years, and to guarantee a minimum consumption of 250,000 units per annum, which works out at 130l. per month.

A NOVEL application of electricity in the handling of iron and steel is reported from Cleveland, Ohio, by Mr. Powell, the British Consul at Philadelphia. It is a lifting magnet, consisting of a large iron disc, supported by chains, which may be fastened to the hoop of a derrick or crane block. To the top of the disc is applied an electric plug device, connected with insulated wires led to a controller on the operator's cab of the crane. This disc is lowered over the material to be lifted and the current turned on, and in this way enormous loads of material are gathered together and held by the magnet so long as the current remains connected. By the use of one of these magnets a car containing 61,000 lbs. of heavy crop ends, many individual pieces weighing over 500 lbs., was recently unloaded in an hour and a half. One hour of this was consumed in crane travel, so that the actual lifting and dropping was done in 30 minutes, or at the rate of 2,000 lbs. per minute. Scrap tin has always been an ugly material to handle, but it is now disposed of as rapidly and easily as heavier stock. The magnet is the result of years of experiment and will and the roughest usage.

VARIETIES.

THE Bradfield District Council have adopted a scheme for the drainage of Tilehurst at an outlay of 12,000/.

THE contract for the new Central Home, Birmingham, has been let to Messrs. R. Fenwick & Co., Birmingham. The architects are Messrs. Cossin, Peacock & Bewlay.

MESSRS. PATMAN & FOTHERINGHAM, LTD., have been appointed the builders to rebuild the Avenue Theatre for Mr. Cyril Maude.

PLANS have been passed by the general works committee of the Coventry City Council for the development of the Bird Grove estate, six and a half acres in extent. There will be two roads and 250 houses will be erected of the artisan class.

THE Manchester Corporation have decided to establish a new hydraulic station in Water Street in consequence of the increased demand for hydraulic power. This is to be

of the same size as the station in Potts Street. The water-works committee have approved the plans.

A BLUE-BOOK containing reports by lady factory inspectors contains the statement that great suffering is caused to women workers throughout the country by lack of proper ventilation in the places in which they work. Some, too—dressmakers, for instance—suffer from excessive cold, others from excessive heat.

THE building boom in the United States is shown in a report which the Government will soon issue. In forty-seven principal cities of the country 184,416 building permits were granted in 1905. The value of the structures erected was 128,111,000/. This shows a large gain of nearly 40 per cent. over the record of the previous year.

CONSUL-GENERAL L. M. IDDLINGS (America), reporting from Cairo, says that the prospects of the use of automobiles are better. Motors can at present be used only in and about Alexandria and Cairo, but the desert offers almost natural roads, and it is estimated that it will cost only from 5 to 10 dols. per mile to make them perfect. The experiment had succeeded so far, and police inspection formerly made on camels and taking six weeks for each trip, can now be made in two weeks.

THE Shrewsbury Recorder has repeated an extraordinary dictum which recently aroused some comment. Dealing at the Quarter Sessions with a charge of lead stealing, he said the curious state of the law was that lead or any other matter fixed to a building became part of the land, and as land could not be stolen, so lead could not be stolen. If anybody without the authority of the owner stripped lead from a dwelling-house, then, subsequent to certain conditions, the prisoner must be acquitted, as he had committed no offence known to law.

MR. CAREW-HUNT, the British Consul at New Orleans, records a proposal to connect the Great Lakes of the North with the Gulf of Mexico by a navigable channel, and the United States Congress will be asked to appropriate 6,000,000/ for the purpose. The river Mississippi will have to be deepened in its higher reaches to allow of steamers navigating it. One of the main reasons for connecting the Great Lakes and New Orleans is to utilise the large lake tonnage during the five winter months when the Northern

waters are blocked with ice. An outlet to the South would allow of this shipping being used to carry grain and other freight down to tidal waters, instead of its lying idle in winter.

THE action of Godden v. the Hythe Burial Board came before Mr. Justice Joyce in the Chancery Division recently as a short cause in default of defence. The plaintiff is a landowner at Hythe, in Kent. In April last the defendants acquired a piece of land adjoining that of the plaintiff for a burial-ground, and in spite of a protest from the plaintiff buried a pauper within 100 yards of a house. Mr. Justice Kekewich had granted an interlocutory injunction, and the Court of Appeal affirmed his judgment on the ground that the burial board could not legally bury a person within 100 yards of a house. The defendants now felt that they could not defend the case further, and Mr. Justice Joyce made the interlocutory injunction perpetual, and ordered the defendants to pay the costs of the action.

THE Platt Hall estate at Rusholme, Manchester, consisting of 77 acres, was put up for auction on the 26th ult. The auctioneer outlined a scheme of building development showing a resultant chief rent of 6,413l. 10s. annually, which, capitalised by a twenty-five years' purchase, equalled 160,337l. 10s., and allowing for interest and time to develop the estate, there was an income in the estate capitalised of 120,000l. to 125,000l. By his proposal fourteen shops and 1,537 houses would be placed on the estate. It was stated that the price of the adjoining land in Moss Side was 1,200l. an acre for building sites. When the bidding had reached 46,300l. the estate was withdrawn.

LORD CAMPERDOWN'S committee of the House of Lords, which has had under consideration the London County Buildings Bill, by which the London County Council seek authority to acquire a site and build a new county hall and offices near Westminster bridge at a cost of 1,700,000l., have found the preamble proved, and have ordered that it should be reported for third reading. Evidence was given on behalf of Messrs. Holloway Bros., whose land forms part of the site proposed to be acquired. It was argued on their behalf that if their land were not taken, the London County Council would still have a sufficiently extensive site to put up an adequate building.

It was reported at a recent meeting of the Coventry Board of Guardians that the joint house and estates committee had received a letter from the United Operative Plumbers' Association stating they had received information that the fair wage clause was being violated and the standard rate of wages not being paid to the plumbers on the infirmary extension work. The clerk had communicated with Mr. Wincott, the contractor, who emphatically denied the allegation, and asked that he might be furnished with a copy of the letter, and also a specific case of alleged violation of the fair wage clause. He would then deal with the matter as he might be advised. It was decided that a copy of the letter be supplied to Mr. Wincott.

THE Municipal Art Society of New York include in their arrangements for the ensuing twelve months a series of "Seeing New York" excursions to visit the important city works now under way; inquiry into the availability of Rockaway beach as a summer resort for the city's poor; offering medals and prizes to the pupils and students in the city schools, the Normal College and the College of the City of New York; co-operating with the police commissioner as to traffic regulation, and drawing up a Bill to be presented at Albany with reference to tall buildings, different heights to be established in different quarters of the city, following somewhat the law of Paris.

THE contractors of Quebec City have formed a protective association, and, according to the *Canadian Architect*, officers have been elected for the different sections as follows:—Carpenters—E. Paquet, P. E. Lamonde, E. Morcissette, W. Peters. Masons—G. B. Ginchereau, W. Sharp, P. Larose, J. Giroux. Painters—B. Leonard, B. Vaillancourt, J. A. Marier, Messrs. Simard & Gauthier. Gas-fitters and Plumbers—J. Walker, A. Picard, M. Matte, C. Vezina, Mr. Brousseau. Roofers—P. Dallaire, E. Falardeau, Messrs. Barbeau & L'Heureux. Contractors' supplies—W. H. Wiggs, L. H. Gaudry. Electricians—R. H. Gale, T. Loneragan. Stonecutters—E. Roy, H. Laforce, A. Lefavre, Mr. Bedard. Alderman A. Galipeault, advocate, has been retained as legal adviser.

THREE anti-road dust schemes are on their trial in Switzerland. The processes under consideration are oiling, watering with deliquescent salts, and tarring. The first

consists in spreading upon a well-swept road a heavy oil obtained from distilled petroleum, and costing about 1/4 a barrel. Watering with such salts as chloride of calcium would give appreciable results were it not for the ophthalmic effect on the eyes. Products of this kind are rapidite, westrumite, apulvite, basilite, odocreol and pulveranto. For tarring the product used is a coal tar, the product of gasworks. It can be applied hot or cold. The spreading with watering-pots must be done during a warm and dry period. It is said these three anti-dust processes have given general satisfaction, and the numerous trials made under the supervision of the Anti-dust League in Switzerland demonstrate that the tar obtained as above is the most efficacious of anything heretofore tried. The League urges frequent and substantial demonstrations of dust-settling processes, and estimates the cost to be but nominal. The French Government, after a four years' trial of the tarring method, have obtained satisfactory results, fully justifying the expense of from 2½c. to 3c. per square yard.

A NEW STEAM PUMP.

Any machine which comes from the works of Mather & Platt, Ltd., engineers, is always calculated to bear the keenest criticism of practical engineers. Their new patent steam pump for boiler feeding against high pressures is remarkable not only for its efficiency, but for its compactness. They are direct-acting in principle, and in consequence there is far less strain, less wear and tear, and less waste of steam than with the ordinary fly-wheel pumps. The steam valves are on an ingenious principle, and are calculated to allow of equal wear in the different parts. The silent working is also evidence of the absence of strain. The water end is also peculiar. The cylinders are lined with gunmetal, the water pistons have bronze and ebonite rings, and there are large surfaces for the clacks. There are several other advantages, not the least being the adoption of standard gauges and templates of all parts. Every pump is tested before leaving the works at Manchester. For everyone who uses high-pressure steam the new feed-pump is a high desideratum.

BRITISH PORTLAND CEMENT.

THE Associated Portland Cement Manufacturers (1900), Ltd., under the title of "A Modern Danger," warn users of Portland cement about the risks which are incurred in purchasing foreign manufacture which appears under the guise of being a genuine British product. They give the following suggested safeguards against fraud, which should be always observed in practice:—When engineers and architects specify "Portland cement" they are naturally anxious to obtain a first-class quality of the genuine article. With so much fraudulent trading in existence, how are they to insure compliance with their wishes? There are various ways of doing this:—

1. By specifying that only genuine artificial Portland cement of British manufacture shall be used on the work.
2. By insisting upon the cement being supplied in sacks bearing the full name of some well-known and reputable British manufacturer.

Unless care is taken the opposition has now assumed such a deceptive character that not only loss but danger may arise. The Belgian Government, it is said, will not allow their engineers to use the same kind of cement used in public works which is foisted on Englishmen.

LOADS ON WAREHOUSE FLOORS.

ON June 15 a six-storey warehouse, the property of the Liverpool Corporation, collapsed and three men were killed. The inquest was postponed to enable an investigation of the condition of the building to be undertaken. It was resumed last week.

The Coroner stated that the internal measurement of each floor was 74 feet 4 inches long and 25 feet wide, and the superficial area of each floor was about 212 yards. There were six floors in addition to the basement, and each floor was divided into ten bays or compartments by nine wooden beams carrying the floor over them. The beams were laid east and west, their ends resting upon the east boundary wall, which was 2 feet thick, and on the west boundary 18 inches thick. Each beam was supported at its centre by a cast-iron column. In the whole warehouse there were about 1,208 square yards available for storage.

THE FIREPROOF CO., LTD.,
Contractors, Specialists, & Engineers,
10 YORK BUILDINGS,
Adelphi, LONDON, W.C.

The premises were let to Messrs. Watson, M'Coll & Co. by the Corporation in January last. On February 1 Mr. Goldstraw, acting on behalf of the Corporation, gave the Corporation a notice with regard to some repairs required, and that notice referred to the floors and the walls. The staircase walls were stated to be giving way, and the iron doors in the walls were loose. On February 2 an important notice or letter was sent by Mr. Goldstraw to Messrs. Watson, M'Coll & Co., referring to this warehouse, drawing attention to the fact that the present loads on the floors of the warehouse were excessive, and requiring them to lighten the loads to not more than 15 cwts. per square yard. On the evening before the collapse the load was 22 cwts. per square yard.

Mr. Wm. Chuck, architect and surveyor, said he visited the warehouse on the morning of June 15 at the request of Messrs. Watson, M'Coll & Co. On examining the place he found an iron column in the basement broken, and after his examination he advised that the hydraulic apparatus should not be used and that nothing should be done which would in any way cause vibration. He told them that the upper floor should be lightened, and that nobody must go into the cellar. Messrs. Watson, M'Coll & Co. told him to return to the warehouse and see that everything was done that could be done and to obtain any assistance which he considered necessary.

Questioned by the Coroner as to the cause of the collapse, witness said he was of opinion that faulty ironwork was in the main responsible, and that column No. 3 broke during the night. It would break suddenly and would give a jerk to the building which would cause the beam to go. He also was of opinion that another column in the cellar had broken before the collapse, otherwise the building might have stood the first one breaking. He believed from outward appearances the warehouse was not overloaded. Having now the knowledge of the hidden defects, he did not think that the warehouse would have been safe with a load of 15 cwts. per square yard.

Mr. James M'Carthy, of the building surveyor's department, said that on January 31 last he received information that the two warehouses, Chapman's "A" and "B," were being loaded excessively. The next morning he went to the warehouse and found it was being loaded with sugar.

In consequence of what he saw he made a calculation that it would be safe if loaded at 15 cwts. to the square yard, and directed a letter to be sent to that effect. Witness was not aware that that amount had been exceeded. The collapse, he asserted, was due to defective columns. The defects could not be found out by any ordinary examination.

Mr. William Goldstraw, city building surveyor, said that the warehouses were placed on the register in 1844. He examined the stanchion after the accident and found that the fracture had occurred at a defective place, which had been filled up before it had originally left the foundry. In one place it was like an eggshell. Witness was of opinion that the defect was the primary cause of the fall of the building. The beams in the warehouse were quite strong enough, and there was no evidence that they had failed before the collapse. He thought 22 cwts. per square yard was too much to put in the building. Witness said he had carefully examined the defective column, and there were indications of filling with a sort of cement. If he had known of the defects he would not have liked to put 15 cwts. per square yard in the building.

Mr. Henry Hartley, architect, stated that the day after the accident he visited the warehouse at the request of Messrs. Watson, M'Coll & Co. The walls were good and the beams were excellent. With regard to the iron stanchion he agreed with the remarks made by the previous witnesses. His opinion as to the cause of the collapse was that the column from some cause—primarily from its weak character—was fractured, and when that took place the column and cap would drop. For sugar storage 25 cwts. per square yard was the maximum amount of storage, and as far as the appearance of the warehouse was concerned the load in it was a perfectly safe one. Knowing now of the defects in the column he did not think that 15 cwts. per square yard would have been a safe quantity.

After retiring for some minutes the jury returned a verdict of "Accidental death," caused by the collapse of the warehouse, due to the excessive weight of sugar in the building and also to a defective column in the basement of the building. They recommended that better supervision of warehouses should be exercised by the Corporation, whether they were their own property or that of others.

IRISH ARCHITECTS AND IRISH BUILDERS.

THE following letter has been addressed, says the *Irish Builder*, by the hon. secretary of the Master Builders' Association to the Royal Institute of Architects, Ireland:—

Sir,—Your letter of the 19th inst. has been under the consideration of my committee, who have requested me to inform you that since 1899 your Council and my committee have been in communication, with the object of agreeing on new conditions of contract for the whole of Ireland, instead of the great variety of forms at present in use, at our request, and also to meet your views as expressed in your letter of June 2, 1900, which states, "It is desirable in such a vital matter that uniformity throughout the kingdom should be secured."

When a settlement was arrived at in 1903 between the members of the R.I.B.A. and the Federation of Master Builders of Great Britain and Ireland we at once wrote offering to accept the new conditions for the whole of Ireland, which conditions were then understood to be acceptable to your members. Before adopting this suggestion you referred it to your sub-committee, but we were not informed of the result of their deliberations, though we wrote you several times, until in January last, when we learned that your Council had approved of new conditions of contract and had sent them on to a general meeting of your Institute for adoption, without any reference or consultation whatever with us. Further inquiry revealed the fact that your Council intended to adopt and put into use these new conditions without any such reference or consultation with the Master Builders, and only on receipt of a strong representation from us on January 26 last did you send us a copy of the new conditions, which had already been approved by your Council some two months previously, and which then only awaited the approval by your general meeting.

On receipt of the copy of the new conditions on February 10 last we at once communicated with the other Builders' Associations in Ireland, and sent them copies for their consideration and views (as the new form was intended to apply to the whole of Ireland).

The Belfast Builders' Association had the matter under their consideration when they learned that the Ulster

Society of Architects had declined to approve of the new conditions which you had prepared. The Ulster Society subsequently prepared new conditions of their own, a copy of which only reached us a few days ago.

Our committee were then face to face with the difficulty for the first time that a uniform form of contract for Ireland, as contemplated and hoped for, was thus rendered impossible, and though your Council were aware of this serious development, we learned to our surprise from the public papers that your members had adopted these conditions at their meeting on the 30th ult. without any further communication with us.

It is more than two years since you informed us that this matter had been referred to your committee, and because the Master Builders' Associations in Ireland, for the reasons already given, have not been able to get through the details of this very long and intricate document, and send you their views inside sixteen weeks, these conditions have been adopted without any notice or further comment whatever.

In England and Scotland the mode of procedure adopted was that in each instance committees were formed consisting of both architects and builders, who went into the matter clause by clause with the assistance of their legal advisers on both sides, and eventually in each case, after much labour, succeeded in approving of conditions that are acceptable to both parties and a credit to those associated with their preparation; while in Ireland we are asked to accept conditions that have been prepared without such consultation with the builders and their legal advisers, and which, as far as we know, have not had the approval of any eminent counsel conversant with building contracts.

Reference is made to the action of our members in agreeing to sign the conditions at present in use in our city, and those as issued by the R.I.B.A., while the arbitration clauses are so different. The reason for this is the desire on our part that no interruption should for the present be caused in dealing with those who do not wish to use the R.I.B.A. conditions; but my committee are strongly of opinion that a form of arbitration clause, such as that recommended and issued by the R.I.B.A., is absolutely necessary in the interests of equity, and to bring building contracts into line with all other commercial transactions.

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

Hand-Power Lifts.

Cabot's Creosote Stains for Exterior Woodwork.

ARTHUR L. GIBSON & COMPANY,

19, 20 & 21 TOWER STREET, UPPER SAINT MARTIN'S LANE, LONDON, W.C.

We trust that these remarks will enable your members to see the necessity of such consultation on the lines referred to as will lead to an equitable agreement on the conditions of contract to be used in the future. My committee will be glad to co-operate in any arrangement to this end.—I remain, yours faithfully,

JOHN GOOD, Hon. Secretary.

55 Great Brunswick Street, Dublin :

June 27, 1906.

R. Caulfeild Orpen, Esq., Hon. Secretary, Royal Institute of Architects, Ireland, 13 South Frederick Street.

BUILDERS' BENEVOLENT INSTITUTION.

THE fifty-ninth annual general meeting of the above Institution was held at 31 and 32 Bedford Street, Strand, W.C., on Wednesday, July 11. Mr. J. W. Chessum was elected to take the chair. The minutes of the last annual general meeting were read, confirmed and signed. The committee of management submitted the following annual report, which was adopted:—The committee has the pleasure to submit its fifty-ninth annual report. Thanks to the kind support of old and new subscribers, the funds of the Institution for the past year did not suffer quite so much as was feared through the continued depression in all branches of the building trade. The appeal of the president (Mr. Benjamin Hannen) in November 1905 was responded to so generously that Mr. Hannen had the satisfaction of announcing a record list of benefactions at the last annual dinner. The President and committee take this opportunity to tender their sincere thanks to the donors and subscribers, and would much like to see the names of many more master builders among them. The committee exercises the greatest care and economy in administering the funds of the Institution, and investigates thoroughly all claims upon them. Elections of pensioners were held in November 1905 and in May 1906, at which four men and four women were placed upon the list. Contested elections were again avoided, and the committee is still of opinion that in the interests of all concerned this is the wisest policy to pursue. There are now thirty-three male and thirty-four female pensioners who

receive respectively 42*l.* and 30*l.* per annum in monthly payments. Seven pensioners died during the past year, and burial allowances of at least 5*l.* were granted in each case. Widows of pensioners, if eligible under the rules, are placed on the Pensioners' List. The committee wishes to place on record its sincere regret at the loss by death of two generous contributors in the persons of the late Mr. Benjamin Hannen (father of the president) and Mr. G. J. Lough. The warmest thanks and gratitude of the committee are due to the president (Mr. Benjamin Hannen) for his generosity and that of his personal friends; to the trustees (Sir Arthur Charles Lucas, Bart., Mr. J. Howard Colls, Mr. T. Stirling, Mr. F. J. Dove, Mr. J. T. Bolding and Mr. T. F. Rider); to the honorary auditors (Mr. J. T. Bolding and Mr. R. J. Ward, F.C.A.); and to the dinner stewards for their services; and to the Worshipful Company of Tylers and Bricklayers for placing one of its almshouses at the disposal of the committee for the benefit of one of the pensioners. The committee is glad to announce that Mr. J. W. Chessum (Messrs. J. Chessum & Sons) has accepted the presidency for the coming year. The annual dinner will be held in the Whitehall Rooms, Hotel Métropole, on Thursday, November 22 next, when the committee hope the friends of the Institution will give the chairman their heartiest support. The audited accounts for the year ending July 7, 1906, were read and adopted.

The following officers, &c., were elected:—President, Mr. J. W. Chessum (Messrs. J. Chessum & Sons); treasurer, Mr. J. Howard Colls; executive committee (re-elected), Messrs. C. Ansell, W. Brass, T. Hall, Hy. Holloway, J.P., W. Nicholson, Alfred E. Parker, Joseph Randall, W. Shepherd, T. Stirling and Colonel G. Haward Trollope, V.D.; (elected) Mr. Benjamin Hannen and Mr. H. Arthur Bartlett; hon. auditors (re-elected), Mr. Robert J. Ward, F.C.A., and Mr. J. T. Bolding.

Votes of thanks were passed to the past president, Mr. Benjamin Hannen; the hon. treasurer, Mr. J. Howard Colls; the trustees, Sir Arthur C. Lucas, Bart., and Messrs. J. Howard Colls, F. J. Dove, T. F. Rider, T. Stirling and J. T. Bolding; the committee of management and dinner stewards; the vice-presidents; the hon. auditors, Mr. Robert J. Ward, F.C.A., and Mr. J. T. Bolding. A vote of thanks to the chairman closed the proceedings.

IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the
Coal Smoke Abatement Society
In Conjunction with
H.M. OFFICE OF WORKS,
At the New Government Buildings in Parliament St., London.

REPORT

(See page 25 of Supplement in issue of June 8).

As a final result of the whole of the tests the Examiners find that of the grates submitted those of

Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results. The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear.
N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

AWARDED SILVER MEDAL, SANITARY INSTITUTE, 1902.

THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

For Simplicity and Efficiency their Closet stands alone.

Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

ITS ADVANTAGES ARE:—

1st. The simplicity, strength of the mechanism, and non-liability to get out of order. 2nd. It is self-acting. 3rd. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4th. The large capacity of the containing magazine holding the earth or other deodorising material. 5th. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

VELURE

WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable.

Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

WORTH
ONE GALLON
WILL COVER ABOUT
90 SQUARE YARDS

TRYING

WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.

Fulfils every Claim.

I have in use found Velure everything you claim for it, and have had much pleasure in recommending it to a visitor staying at Ladbroke from Ripon, who no doubt will, after returning home prove to be a customer of yours.

T. STILES, Ladbroke,
March 9, 1906. Chine Crescent, Bournemouth.

We have hundreds of Testimonials similar to this.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

ELECTRIC NOTES.

THE Selby Urban District Council will proceed at once with their application for a provisional order authorising them to supply electricity under the Electric Lighting Acts. Messrs. Medhurst, Page & Lloyd, electrical engineers, are to prepare a scheme for carrying out the work.

THE Brighton Corporation, owing to the freedom from serious mishaps experienced hitherto on their electric tramway system, have decided not to renew their insurance policy against third party accidents, but to set aside yearly a sum of 600*l.* to meet any claims that may arise.

MR. A. G. DURNFORD, R.E., inspector of the Local Government Board, held an inquiry at West Bromwich into the application of the Corporation for sanction to borrow 5,150*l.* for the purpose of carrying out extensions at the generating station at Black Lake, in order to meet the increasing demand for electricity.

TRINITY HOUSE states that it is incorrect to say that they are adopting the incandescent oil burner at all the lighthouses under their charge. Nor has the incandescent oil burner superseded the electric light at the Lizard or any of their other electric lighthouse stations in this country. They do not consider the incandescent oil burner an illuminant superior to the electric light during fog.

THE electric-lighting committee of Edinburgh Town Council recommend the Council to have lighted with electricity common stairs whose houses have an electric installation. The rate was fixed at 20*s.* per 5 candle-power lamp per annum, including maintenance. With regard to the realised balance of 16,361*l.* it was agreed to recommend that 10,000*l.* be placed to reserve and 5,000*l.* to reduction of capital debt, leaving 1,361*l.* to the Council for disposal.

THE *Feuille Fédérale Suisse* contains the text of concessions granting:—1. M. Othmar Kluser, of Brigue, the right to construct and work a narrow-gauge railway (partly funicular) between Stalden and Saas Fée. The estimated cost of the installation is about 116,000*l.*, of which about 9,000*l.* is to be spent on rolling stock. 2. Messrs. C. Niess

and L. Flesch, both of Lausanne, and M. F. Buchs, of Ormont-dessus, the right to construct and work a narrow-gauge electric railway between Ormont-dessus and Gstaad. The estimated cost of the installation is about 80,000*l.*, of which about 5,728*l.* is to be spent on rolling stock. 3. Messrs. Haag & Grenlich, of Bienne, the right to construct and work a narrow-gauge electric railway from Grindelwald to the Mer-de-Glace. The estimated cost of the installation is about 92,000*l.*, of which about 19,100*l.* is apportioned for the purchase of rolling stock and hydro-electric plant and the construction of a generating station.

VARIOUS new cotton mills in Lancashire have been or are being fitted for electric driving, but the mills of Messrs. Ashworth, Hadwen & Co. at Droylsden are, according to the *Manchester Guardian*, the first in which electric driving has been substituted for an existing steam plant for spinning and weaving. The mills contain 39,000 spindles and 818 looms, and the steam-power installation, which had been in use for a couple of generations and included long lines of main shafting and much heavy gearing, was practically worn out. The electric installation, which is already partly at work and will be completed in a few weeks, includes steam turbines of 700 horse-power, super-heaters, electric pumps and all the most improved appliances, and the complete change from steam to electric driving will, it is claimed, have involved not a single hour's stoppage of the mills. A considerable increase of output and decrease in working cost are anticipated.

The town clerk of Edinburgh has prepared a report bearing on the decision of the House of Lords committee on the Tramways Bill, and advising the Town Council as to the policy to be followed in carrying out the powers obtained with regard to the Broughton and Gilmore Place routes. In considering future extensions or additional tramways, the Corporation, while keeping in mind that these should be either practicable in themselves or be connected with other systems, will probably have regard to the capabilities and advantages of electric systems. Those

lines which may hereafter be proposed may either be constructed by the Corporation—and worked by the lessees—or formed and worked by companies (especially where continuations into the county are involved) on such conditions as the Corporation may consider sufficient to safeguard the public interest, and to fit in with possible comprehensive new arrangements at the termination of the present lease. It was inevitable that tramway extensions in many directions must take place within and around the city in the immediate future, and the recent proceedings, subject to the explanations already given, had shown that the Corporation were entitled to make such new or additional tramways, either cable or electric, as they considered necessary in the public interest without interfering with the rights of the lessees under the lease.

BUILDING AND BUILDERS.

THE Acton District Council have approved of plans for new municipal buildings estimated to cost 35,000*l.* This is an alternative scheme to that rejected by the Local Government Board, which was estimated to cost 100,000*l.*

THE Plumbers' Company have presented to the London County Council a number of books, specially bound, and bearing the company's arms, for the use of students attending the plumbing classes at the School of Building.

THE finance and town hall committee of the Birkdale Urban District Council have decided to erect a new wing at the back of the town hall, to include a new council chamber and large committee-room. The estimated cost is 1,450*l.*

MR. JOHN FYFE, a well-known Aberdeen granite merchant, died in his seventy-seventh year on the 18th inst. at Aberdeen. He was responsible for the pier foundations for the Forth, Kew, Putney and Tower bridges, the Thames Embankment, as well as numerous buildings in Aberdeen, and a host of dock and harbour works.

THE death has occurred of Mr. Samuel Biggins, Edge, Malpas, who (says the *Liverpool Courier*) conducted an important builder's business, and some of the finest and best

work on local estates was entrusted to him. The excellence of his work was a local byword. The principals of the firm, themselves skilled craftsmen, invariably conducted the building operations, which were expeditiously performed.

BEFORE Judge Owen at Newport County Court, the action Knowler *v.* Williams to recover 85*l.* os. 3*d.* on a building contract was again down for hearing. It was agreed at the last court to submit the matter to arbitration in order to decide what was due. Mr. J. W. Hunt, the arbitrator, found that the formality of a counterclaim had not been duly made, and therefore reduced his award to 50*l.* 1*s.* 11*d.*, leaving the remaining 30*l.* to be fought over in a new action. The plaintiff asked for costs. His Honour ultimately allowed costs on the action on Scale C, as the amount claimed was above 50*l.*, and judgment was accordingly entered for plaintiff for the amount of the award and costs of the action.

THE medical officer of health for East Sussex, in dealing in his annual report with the suggested advisability of some modification of the building by-laws in force in many rural districts, states that it would appear that the chief defect in existing by-laws of the urban type when applied in rural districts is to be found in the restrictions compelled with regard to building material. Regulations which provided against dampness of the house, and which insured free access of sunlight to and proper ventilation of dwelling-rooms, cannot be enforced with too much stringency. But with regard to general structural details, very much more liberty than is allowed at present should be possible. The medical officer says the absurd tyranny of the more restrictive kind of by-laws cannot be better illustrated than by pointing out that in many country districts the well-to-do individual would not be allowed to provide for his own use a convenient residence constructed on the same principles as, for example, the buildings, excellent from the hygienic point of view, which the Admiralty, after taking the best available expert advice, have provided for the cadets at the Royal Naval College at Osborne. By-laws in these rural districts appear to have been formulated with a view of insuring for the labourer's cottage a monumental permanency which is neither necessary nor even desirable.

VARIETIES.

THE Metropolitan Water Board have approved an estimate of 85,000*l.* for the construction of six filter-beds at Ditton, on a site belonging to the Board.

THE new free library at Northampton is to be carried out under the supervision of and from the designs of the borough engineer and surveyor.

THE City Corporation is about to spend 40,000*l.* at the Metropolitan Cattle Market, Islington, on the construction of public slaughter-houses.

THE Mersey Docks and Harbour Board have agreed to the proposals to extend and improve the Brocklebank and North Carriers docks at an estimated cost of 279,500*l.*

THE London, Edinburgh and Glasgow Assurance Company, Ltd., are about to erect new premises at the corner of Euston Road and Euston Square. The designs have been prepared by Professor Beresford Pite.

THE Cardiff asylums committee have decided not to proceed with the erection of a clock on the tower of the new city asylum at Velindre. The recommendation of the architect was of a clock with three dials, each being of 8 feet diameter, and the total cost was estimated at 400*l.*

MESSRS. WARWICK & HALL, the architects, estimate that for the erection of the new municipal buildings for the borough of Holborn the amount will be under 20,000*l.*, the land would cost 21,000*l.* and furniture and additions 8,000*l.*, making a total cost of 49,000*l.*

MR. DIMOND GORDON, one of the Local Government Board auditors, has intimated to a deputation of Hammer-smith ratepayers that in his audit of the Guardians' half-yearly accounts he intends to disallow 3,000*l.*—an item connected with the expenditure on the new workhouse—which will be surcharged to the Guardians.

AN ideal place to spend a holiday is the beautiful golf course of the Hadelot Golf Club, near Boulogne. The spot is an ideal one, and the club, which has been established there in connection with the Société d'Hadelot, by which Society the district is being developed, is a flourishing one. There are plenty of other pastimes to be indulged in—tennis, croquet, archery, boating, fishing and shooting. Mr. John R. Whitley, the founder of the exhibitions at Earl's

Court, is the promoter of Hadelot, and the success he has met with is well merited.

THE Lord Provost's committee of Edinburgh Town Council have decided that a register of historical buildings in the city should be prepared. They have also approved of the site for the monument to the Black Watch on the Bank of Scotland ground at the corner of the Mound and Market Street.

THE American consul at Birmingham reports to the Department of Commerce at Washington, U.S.A., that in British mercantile and engineering circles they are sometimes mildly sarcastic about the ease with which catalogues can be obtained from American manufacturers, disclosing designs and even giving best discounts.

PLANS for bringing a water supply to the city of Athens from Lake Stymphalos, a distance over sixty-two miles, are nearly complete. The aqueduct will consist of masonry, where necessary, and of iron pipes. A company will be formed with a capital of nearly 1,250,000*l.*, and there will be an additional loan by the company of 705,000*l.* guaranteed by the Greek Government.

A FREEHOLD building site at the corner of Piccadilly and St. James's Street, W., covering an area of 5,312 feet, exclusive of an area of vaults of 1,973 square feet under the pavement, was put up for auction at the Mart. Competition at the sale was fairly good up to 155,000*l.*, but as there was no advance on this figure, a bid of 165,000*l.* was made on behalf of the vendor, and the site withdrawn to be dealt with privately.

IN view of the transfer of the North Metropolitan Tramways Company's undertaking to the London County Council, the employés are to be placed on the Council's standard conditions of labour. The cost of making these alterations including the employment of additional men, who will be required in consequence of shortening the hours of labour, will amount to about 15,658*l.* a year.

A SCULPTURED figure of Lord Armstrong, the founder of the Elswick Works, has been placed in the grounds of Newcastle Natural History Museum at a cost of over 5,000*l.* The base of the monument is semicircular in form, with two wing walls, and above it rise a massive pedestal of Heyworth stone and the statue in the centre. The figure,

which stands 9 feet high, was sculptured by Mr. Hamo Thornycroft.

THE London County Council have approved of the plans for the erection of buildings on the eastern and western sides of Regent Street between the Quadrant and Oxford Circus. The scheme involves the ultimate rebuilding of nearly the whole of the houses and shops on both sides of the street. A considerable area of ground at present covered by one-storey projections will be built upon to the height of the main buildings, and the area now occupied by buildings will be reduced by about 3,400 feet.

"THE Workmen's Compensation Act may be an endowment to lawyers in one sense," said Sir William Selje during the hearing of an accident case at Brompton, "but it is a great blessing to the working people of this country." His Honour added that the Home Office estimated that 150,000 accidents occurred yearly in the occupations to which the Act applied, and statistics showed that not more than 1,500 of these cases on an average ever came into court.

THE Uruguayan Government propose to make a considerable addition to the port works now in course of construction at Monte Video. The proposal is to build a new dock, 180 metres wide at base, to be completed on the western side by a solid mole 67 metres wide and 370 metres long, with space for sheds, &c., and a large open space for the movement of vehicles. This will mean an addition to the port works of nearly 1,000 metres of wharf line. The cost is estimated at 800,000 dols., or over 170,000*l.*

THE Premier of Western Australia states that the total wooded area of the colony is estimated at 98,000,000 acres, and the extent of merchantable timber has been reckoned to be, approximately, as follows:—Jarrah, mainly (with black butt and red gum interspersed), 8,000,000 acres; Karri, 1,200,000 acres; Tuart, 200,000 acres; Wandoo (white gum and allied timbers), 7,000,000 acres; York (gum, yate, sandalwood and jamwood), 4,000,000 acres; total, 20,400,000 acres. This represents a forest area of merchantable timber four times greater than the whole area of Wales. The total value of timber exported from Western Australia for the ten years ended 1904 was 4,800,000*l.*

IN the competition for the Wesleyan church, Wallington, Surrey, the committee have awarded first place to the design of Mr. Frank Windsor, of Croydon, whose design has been accepted from a selection of thirty-two submitted names of architects, with a final selection from drawings submitted by six. The second premiated design was awarded to the late Mr. W. D. Church, of South Place, and the third premiated design to Mr. H. A. Woodington, of Jermyn Street. Accommodation is provided for 600 sittings, and the plan has large central nave with ambulatories. Exterior work to be carried out in Kentish rag, and the architect's estimate without tower is 6,640*l.*

REPRESENTATIVES of local authorities in Monmouthshire have held a conference to consider the question of the conservation of the water sources of the county. It was resolved:—"That in the opinion of this conference it is desirable, in the interests of the county, and especially its industrial districts, that the present sources of water supply should be conserved, and all measures taken for preventing outside companies or bodies from abstracting water to which the inhabitants of this county have a natural claim; that the County Council should promote a Bill in Parliament in the ensuing session with the view of securing a good and ample supply of water for the benefit of the county."

MR. GEO. A. PHILLIPS, deputy county surveyor, has reported to the Glamorgan roads and bridges committee that the experiment of tarring a section of the main road at Bridgend for dust-laying was commenced on June 12. The length of road treated was 923 lineal yards. The effect so far is considered satisfactory. It was, he said, perhaps a little early to base any recommendation upon the short experience of this method of treating the roads, but the method certainly presented itself as one of the most efficient and economical ways of dealing with the dust nuisance, complaints of which had been received from Pontardawe, Pontardulais and other parts of the county. The cost was 29*l.* 18*s.* 11*d.* It is expected the road will require treating once every year.

THE Cleveleys Cottage Exhibition was opened on Saturday. The exhibition has been built on the Thornton portion of the landed property of the Fleetwood Estate, Ltd. The estate is 2,300 acres in extent; competitors are allowed to erect houses of any cost, but must state the full cost and also the sum for which duplication would be made for customers. Money prizes are offered in several classes—for the best and most economical detached cottage, with not less than three bedrooms; for the best and most economical pair of cottages; for designs and specifications, and for the best laid-out gardens. These will be awarded by a committee of architects and builders. In all forty-four houses and bungalows have been erected or are in course of erection. The exhibition is to remain open three months.

AN unusual bridge project is now under way for bridging the Mississippi river at St. Louis. By a recent public vote the project of a free municipal bridge was approved by a large majority. Under this ordinance a sum of 3,500,000 dols. becomes available for "the construction and maintenance of a municipal bridge for public use by railroads, street-cars, vehicles of all kinds and pedestrians over and across the Mississippi river, and for the purchase of land to be used for approaches thereto."

MR. ARTHUR C. PAIN, of Westminster, has, as requested by the Middlesbrough Corporation, submitted a report and recommendations as to the means of improving the communication across the river Tees between Middlesbrough and Port Clarence. In his opinion only two methods claim serious consideration, viz. a tunnel or a transporter bridge. Of these two he advises the adoption of the latter. It would be practically on the lines of the old ferry landing, and therefore as short as possible. The transporter car would be 40 feet long by 33 feet wide, capable of carrying a freight of 71 tons, or about 600 passengers. The cost of construction he estimates at 55,580*l.*, with the usual 10 per cent. for contingencies and the Parliamentary and engineering expenses; total, 67,195*l.* His estimate of the working expenses is 1,740*l.* per annum, as compared with an average working cost of the present ferry of 3,102*l.* The question is under consideration.

HIS Honour Judge Ellicott gave judgment at the Cheltenham County Court in the case of Brooker v. Warren, which was a claim for compensation by a widow for the loss of her husband, who was killed while engaged in sawing larch poles at a circular saw at the defendant's saw mill. The facts were not in dispute, the defence to the claim being that the deceased man had been guilty of such serious and wilful misconduct as to disentitle his relatives to recover anything. His Honour found that Brooker was disobedient and wilfully so in not using the guard provided by his employer, but did not consider the disobedience was of so serious a character as to take the case out of the Compensation Act.

Architects and Builders engaged on the rebuilding and requiring best materials should send their orders and enquiries to above.

They hold extensive stocks, ready for immediate shipment, of—

DRAIN and SOIL PIPES (Coated or Glass Enamelled), RAIN WATER PIPES and GUTTERS, CASTINGS for MANSARD ROOFS, ELECTRIC LIGHT PILLARS, CARRIERS, WIREWAYS, &c., while for CONSTRUCTIONAL WORK, VERANDAHS, STAIRCASES, &c., their very large range of PATTERNS for COLUMNS, FRIEZES, and SPANDRILS, being always ready for instant operation, will assure earliest despatch of any work in this way entrusted to them.

tion to Workmen Act. It was a case of a skilled and experienced sawyer backing his opinion against that of the factory inspector, and he had paid the penalty for one single disobedient act by his life. But the facts negated recklessness. His Honour gave judgment for the widow for the full amount of the claim, viz. 150*l*.

A LARGE deposit of clay has been discovered in Monterey co., California, says *Scientific Experiments*, from which can be manufactured an absolutely fireproof brick. A house built of these bricks cannot catch fire from the outside and flames inside are quenched by a vapour that rises from the brick when heat is applied to it. The brick is an excellent non-conductor, and remains cold an inch below the surface while a hot flame from a gasoline torch is directed against it. Experiments have been made with the new brick, of which a report has been presented to the Merchants' Association of Monterey. The deposits of clay from which the brick is made are very extensive and the brick can be manufactured cheaply. The Merchants' Association will conduct further experiments, and, if the bricks prove to be satisfactory, the building of fireproof structures will be revolutionised.

THE report of the manager of the artisans and labourers' dwellings owned by the Corporation of Liverpool, which has just been published, shows that on December 31, 1904, the total number of tenements under the control of the committee was 1,670 (comprised in twelve separate blocks of dwellings), affording accommodation for 7,892 persons. There were also at the same date fifteen shops. During the year ended December 31, 1905, 150 additional tenements were opened, providing accommodation for 828 persons, thus bringing the aggregate number of tenements to 1,820, containing 4,359 rooms capable of accommodating 8,720 persons. At the close of the year 1905 the total gross annual rental of the tenements and shops amounted to 17,799*l*. 12*s*. 8*d*. The total receipts for 1905 amounted to 14,602*l*. 17*s*. 10*d*. The expenditure for the year was 7,290*l*.

THE Manchester City Council on the 18th inst. approved of the following resolution:—"That having regard to the continued increase in the consumption of water and the length of time it will take to carry out the work, it is necessary that arrangements should now be made for laying

the third pipe in connection with the Thirlmere aqueduct, and that the Council approve of this proceeding and authorise the committee to appoint the engineers and take all requisite steps in this matter." A part of the cost of laying the new pipe was anticipated in the laying of the second pipe. When making passages through rock they sometimes made the passage wide enough to admit of a third pipe without further blasting. The estimated cost of the third pipe is about 750,000*l*. The committee possess borrowing powers to the extent of 650,000*l*, and the balance will be the subject of an application to Parliament hereafter. An aqueduct connected with the third pipe to carry water from Little Hulton to the reservoirs at Audenshaw has already been sanctioned.

METAL CASEMENTS.

EXPERIENCE has proved that for some classes of buildings metal casements have advantages over those of wood. Those manufactured by Mr. William Hatton have peculiar advantages. They can be fitted with gun-metal handles, screw and swivel stays and condensation gutters, or with wrought-iron handles, stays and gutters. The former are slightly more expensive, but there is a graduated scale which is adhered to by the maker. The title "French casements" is not inapplicable, for the handles, stays, &c. are as excellent in style as any to be obtained in Paris. They are, however, produced by Mr. Hatton at prices below those prevailing in France.

TRADE NOTES.

THE Pulsometer Engineering Co., Ltd., of Reading and London, have requested us to announce that they have given up their Manchester agency and have opened branch offices instead at 206 Corn Exchange Buildings, Cathedral Street, and appointed Mr. George Thompson, manager.

THE Drill Hall in Bristol, which was selected for the exhibition of the Royal Sanitary Institute, like other buildings of its class, could not be considered as attractive. But by the application of Duresco its appearance was trans-

formed, and enabled all the goods displayed to be seen under advantageous circumstances. At the stall and specimen bath-room shown by Messrs. Rowe Bros. & Co., the district agents, it was possible for public officials, architects, surveyors, as well as the public, to observe the value of Duresco in decoration as well as the other merits of this excellent water paint, which in Bristol has proved its value when emergencies arise and time and economy must be respected. It may be added that 40,000 square yards were covered with Duresco at the Royal Victoria hospital, Newcastle-on-Tyne.

NEW CATALOGUES.

MESSRS. NORTON & GREGORY, LTD., have published a new edition of their catalogue of drawing and surveying instruments, drawing materials, stationery, &c. It has the great advantage of being divided into sections, and there is also a complete index. Any article desired can be instantly referred to. From their position in Westminster the firm are well acquainted with the requirements of architects, engineers and contractors. Their supply is therefore comprehensive, and, what is no less important, can be obtained at cheap rates. Recent improvements in instruments are exhibited in the pages.

THE inconvenience which arises from sash lines and chains or from the pulleys is known to most occupants of houses, for whenever an accident arises they immediately come to the conclusion that all parts of the house are equally fragile. Messrs. Harcourts, Ltd., of Birmingham, have been established for over a century, and they make a specialty of chains, pulleys, hooks and weights, entitling them to be considered as domestic benefactors. They manufacture copper chains of rivetted links having a breaking-strain, according to the size, varying from 250 lbs. to 1,200 lbs. They have been used in the City Hall, Belfast, the General Hospital, Birmingham, and other hospitals, in barracks, club-houses, offices and works. They have also patented sash hooks which are bent with the grain and are superior to forged hooks. If preferred, they have a bolt and plate attachment. Their axle pulleys, which are an important factor in easy working and the

avoidance of breakage, are made only in one quality. The face and wheel are brass and the bushings iron or gunmetal.

A NEW RADIATOR.

THE necessity for having efficient means of heating affords continual opportunities for the display of American inventiveness. They prefer radiators to our open fires, and they possess a surprising variety of forms. In England objections are raised against the American systems on account of the general use of cast-iron. The new Kinnear pressed radiators will overcome any prejudice which that material created, because in them wrought-iron has been substituted for cast-iron. If conductivity were alone considered the advantage is with wrought-iron, for investigators say it has one-tenth more of that power. But other advantages follow. It is not necessary to have so much thickness in the parts, and consequently with additional strength there is one-fourth less weight. Less water or steam is needed, which means economy in fuel, and the liability to accident from freezing may be said to be entirely removed. Great care is taken with all the joints and connections. Both inside and outside is coated with zinc, by which the radiator is impervious to the impurities which are found in some waters. A test of 35 lbs. to the square inch under hydraulic pressure is also applied to each radiator. With these precautions the durability is vastly increased. Architects will, of course, prefer to exercise their own judgment, and the Kinnear pressed radiators may now be seen at the premises of Messrs. Arthur L. Gibson & Co., Tower Street, Upper St. Martin's Lane, W.C.

CHUBB'S "99" STEEL VAULT.

At the invitation of Sir George Hayter Chubb, Bart., and his co-directors, a large and distinguished company visited the extensive works of Chubb & Son's Lock and Safe Company, Ltd., in Glengall Road, Old Kent Road, S.E., on Tuesday last, to inspect the strongest steel vault or treasury in Great Britain, built for the Royal Bank of Scotland, which has taken a year to construct and is a unique production.

WATERTIGHT
COVER.

ADJUSTABLE
SPRING
AND
SHOES.

Its dimensions are 9 feet 3 inches wide, 8 feet 10 inches high and 23 feet 8 inches long, the gross weight with door and fittings being 50 tons.

The walls, roof and floor consist of a series of slabs of steel which are rivetted and bolted together, so as to make one continuous piece, the thickness of the slabs being 2 inches, and at the joints this is increased up to a thickness of $3\frac{1}{2}$ inches. The strength of the room may be said to lie in the plates of Cammell's '99 alloy steel, made specially for Messrs. Chubb, as the result of most exhaustive experiments, and the most characteristic quality of which is toughness. As a backing to this steel, alternate sheets of welded armour plate make up the thickness of 2 inches.

The outer plate of the treasury door is a solid slab $4\frac{1}{2}$ inches thick of the best armoured plate, specially prepared for this particular work, and the peculiar feature is the absence of any spindle or keyhole, thus insuring extra security. The patent diagonal bolts are secured by a triple time lock, a keyless combination lock, and also a special anti-explosive lock, protected by a heavy manganese steel

casting within the room. The hinges, being adjustable and on ball bearings, enable the door, which weighs 4 tons, to be moved with comparative ease.

When this treasury, which is believed to be the strongest ever constructed in Europe, is finally placed in position, it will stand on a bed of armoured concrete 2 feet thick, and will be surrounded by walls of hard Stafford blue bricks 18 inches thick, having bars of 2-inch steel built in the alternate courses.

CONTINENTAL HOLIDAYS.

In order to accommodate holiday makers, tickets at reduced fares available for eight days will be issued by the Great Eastern Railway to Brussels August 1 to August 4 inclusive and August 6, and to Zurich, *via* Harwich and Antwerp. Dining and breakfast cars are run between London and Parkeston Quay, Harwich, on the Antwerp service. Passengers leaving London in the evening reach Brussels next morning. For visiting The Hague, Scheveningen (the Dutch Brighton) and Amsterdam for the dead cities of the Zuyder Zee special facilities are offered. From the Hook of Holland through carriages run in the North and South German express trains to Cologne, Bâle and Berlin, reaching Cologne at noon, Bâle and Berlin in the evening. Tickets dated in advance can be obtained at the Liverpool Street station continental inquiry and booking offices.

A SERIOUS fire broke out on Wednesday evening at Leeds. The premises of Messrs. Hotham & Whiting and the Great Northern hotel were destroyed. The damage is estimated to be at least 100,000l.

The General Post Office has offered the Brighton Town Council 49,000l. for the telephone undertaking, and the telephone committee recommend acceptance of the offer.

The West Ham Local Board are about to apply for a Local Government Board loan of 75,650l. for the electricity undertaking.

THE DEVELOPMENT OF CADIZ.

THE British Consul, in his report on the trade of the district of Cadiz, says the construction of the electric tramway line to San Fernando from Cadiz, 14 miles, is nearly completed. It is intended to continue the line to Chiclana, Tarifa and eventually Algeciras. The line will be a great boon to Cadiz, whose population is unused to travel, the majority having seldom gone beyond the narrow neck of sand which connects this historic city with the mainland. Cadiz is almost an island, a fortress surrounded on all sides by a wall through which there is a gateway into the town. Beyond this entrance stretches a long, narrow belt of sand, dividing the Atlantic from the bay. As circumstances now are it is impossible, within town limits, to extend the available building area. It has been, to quote an oft-written local expression, "a long cherished dream" of the people of Cadiz to demolish a certain portion of these picturesque, but now useless, walls in order to obtain space for erecting factories and developing the business portion of the town. This "dream" is not without interest to the foreign traveller, since it includes the laying out of gardens and building of modern hotels. It is proposed to utilise the material obtained in lengthening existing piers and reclaiming land from the sea, thus enabling vessels to load and discharge cargo alongside of wharves instead of as now by means of lighters in the often ruffled waters of the bay. The advantage of this to the desired revival of trade in Cadiz cannot be overestimated.

In the prevailing distress through lack of employment local authorities and influential merchants have found opportunity to bring forward their scheme, and with such energy have they pushed it that at the time of writing the report the walls are being demolished, and all who desire work can obtain it at a certain fixed wage. However, it is a task of greater magnitude than can be accomplished by those unused to such form of manual labour, and there is little doubt that the work in all its branches will be handed over to the contractors of the harbour works, for whom the material obtained from the walls is ultimately intended.

The past year witnessed the completion of new station buildings, and Cadiz now possesses a railway terminus, perhaps the finest in this part of Spain.

THE NEW YORK LIBRARY.

A CORRESPONDENT of the *Glasgow Herald*, in describing the development of the American library, furnishes some particulars of the new building in progress in New York. Credit must be given, he says, to Boston for the new departure in library construction, which dates from the Copley Square Library. The departure can be described in a few words. It simply meant the complete abandonment of the long accepted plan of shelving the contents of the library in the main reading-room, and providing stack-rooms for books and a large hall to be used exclusively as a reading-room. At Boston the stack-rooms are apart from the rooms which are open to the public. They are fire-proof, of course, like the other parts of the building, but internally they are as free from ornamentation as a factory. They are simply warehouses for books; and as only the members of the library staff need have access to them, the gangways between the shelves are narrow, so as to admit of every available foot of floor space being turned to account. Window light is not absolutely essential for all parts of a stack-room, as electric lights are placed in the gangways, and can be used at any part of the shelves when a book is taken down or returned.

With the adoption of the stack-room plan there followed almost necessarily the electric carrier for conveying books between the stack-rooms and the reading-room and the delivery tables in the circulation department, and also pneumatic carriers for conveying the slips of readers to the library assistants who are assigned to the stack-rooms. All these new departures were embodied in the internal and administrative economy of the Boston public library, and just as soon as they were seen in service people who work much in libraries wondered how it came about that the old plan with the books shelved about the reading-room had survived so long. The gain from these departures accrues to all who use the library—especially to students who work in the reading-room—and they add enormously to the efficiency of the library staff. For students in the reading-room they get rid of the noise and disturbance due to the running up and down stairs of the library assistants. For

the library staff they save much of this running to and fro about the reading-room, and the electrical carrier system is so arranged that books can be returned to convenient tables in the stack-rooms for redistribution to the shelves. There is a gain also from the point of view of the wear and tear of the books, because bindings are not nearly so much exposed to light and dust as when books are shelved about the reading-room. The Boston plan was followed in the building of the Congressional Library, and it has been adopted in smaller cities, such as Providence, Rhode Island, which have built new public libraries since the Boston Library was opened.

In the new library now building for New York there are innovations on the Boston plan. The plan is adopted in its main lines, but it is carried a stage further so as to secure even more quiet and the least possible disturbance for students at work in the reading-room. In the New York Library the main reading-room is on the top floor—the third floor—and above the stack-rooms. This plan quite removes it from the more public departments of the library, such as the newspaper and periodical rooms, the permanent art collections—for which the New York Library is famous—and the circulation department, and admits of the reading-room being lighted from the south, west and north, as well as from inner courts on the east and by top lights. Incidentally, this plan also admits of one range of windows overlooking Bryant Park. At the Congressional Library the administrative department of the reading-room is circular, on the plan of that at the British Museum, for at Washington, as at Bloomsbury, the reading-room is under the dome and is circular in form. Bates Hall, the reading-room at Boston, is rectangular, and the administrative department is at the south end, and is cut off from the reading-room by a partition. At the New York Library the administrative department—where the catalogues are consulted and where slips are filed for books and books received and returned—is in a room apart. It opens on to the reading-room and also on to the hall, and by this arrangement the entire floor space in the reading-room, which will give table accommodation for 800 readers, will be freed from the intrusion on work which follows from the consulting of catalogues by readers and the delivery and collection of books by the library assistants. The plan as it now stands represents

the furthest development in library economy in the United States—the greatest development in a department of public service, in which Boston, Washington and New York have gone beyond the achievements of any of the old-world cities.

The new building at Fifth Avenue and Forty-Second Street is to house the Astor, Lenox and Tilden libraries, which were consolidated in 1895. It is to cost 5,000,000 dollars, not including any outlay for the land. The site, which is the most commanding in uptown New York, is the gift of the city to the Trustees of the Public Library. The building has a frontage of 366 feet on Fifth Avenue, and is 246 feet deep from east to west. It is 68 feet high from the ground line to the top of the cornice on the centre of the Bryant Park front, and 98 feet high at the centre of the Fifth Avenue front. There are two open courts each 81 feet square. The main stack-room is 274 feet long by 72 feet wide and 52 feet 6 inches high. It is of seven floors, and will give shelfroom for 1,250,000 volumes. The lending department is on the basement floor, the lending delivery-room being at the bottom of the north court. It is 81 feet square and is lighted from above, and communicates directly with the lower tier of the main stack-room. On the first floor there are three large reading-rooms, a children's-room 118 feet by 42 feet; a periodical room, 118 feet by 42 feet, and a newspaper-room, 92 feet by 38 feet. Besides these three reading-rooms and the public reading-room on the upper floor there are special reading-rooms for scholars and special students on the second floor. These include a room for public documents, a room for Oriental literature, a room for sociology and economics, a room for mathematics and physical and chemical sciences, a map-room, a music-room, a Bible-room, and six special study-rooms, these being about 15 feet square. The east front of the upper floor is to be occupied with picture galleries, the Stuart room and other exhibition-rooms, which are to be freely open to the public. The rooms for administrative offices are grouped on the south side of the building. They include printing office, bindery, packing and shipping-rooms on the basement floor; receiving and checking-rooms, business superintendent's offices, on the first floor; directors' offices, order-room, catalogue-room and accession-room, on the second floor.

Are you interested in WOOD PRESERVATION?

Apply to the ANTHROL Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of ANTHROL and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. ANTHROL does not require expensive pressure-plant; does not reduce the mechanical efficiency of the timber; does not increase the liability of the wood to inflame; does not render the wood poisonous to human beings or domestic animals; and does not leave the surface of the wood black and unpleasant for handling—on the contrary, ANTHROL, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park
and 6 Crosby LONDON.

Art Plates from "The Architect."

AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION
AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which have appeared in "THE ARCHITECT" can now be obtained in a separate form on proof paper suitable for framing.

The Corn Field.—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOUIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudouin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial*. "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage*. "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudouin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman*. AND NUMEROUS OTHERS.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

Galatea.

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

COOLEY'S PATENT

DOUBLE DOWEL-PINS.

By this system each Block is securely fastened to its neighbour, and by means of the double-grip each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.

For Wood-Paving purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of vibration.

The ST PANCRAS IRONWORK CO. LTD.

The accompanying illustration shows one of the switchboard galleries erected by The St. Pancras Ironwork Co., Ltd., at the City of Bradford Electricity Works. The floors consist of the St. Pancras Insulated Floor Lights, specially designed for use on Switchboard Galleries, for which purpose they have been adopted with great success on many important stations under leading engineers. The iron framework, which is very strong, is completely insulated by the glass lenses, which are of special shape with a chequered surface to give good foothold, while the joints between are caulked with a patent hard, fire, water, and electricity-proof composition, thus forming a complete glazed and insulated floor.

Extensive modern plant and special resources enable the St. Pancras Ironwork Co., Ltd., to carry out every description of

LIGHT IRONWORK with accuracy, despatch and economy. Architects and Engineers' designs faithfully executed.

THE
Architect and Contract Reporter.

FRIDAY, AUGUST 3, 1906.

Published weekly, subscription 19s. per annum for Great Britain, and for Colonial and Foreign subscriptions £1 6s. 6d.

All business communications to the Managing Director,

P. A. GILBERT WOOD,

Publishing Offices, 6-11 Imperial Buildings, Ludgate Circus, London, England.

* Entered in the United States of America as second-class matter. Agents for America, The International News Co., 5 Bream's Buildings, Chancery Lane, London, England, and New York.

**Important Notice to the
Architects and Civil Engineers of Westminster.**

As Westminster has become one of the most important centres of the professions of Architecture and Civil Engineering, arrangements have been made by Messrs. GILBERT WOOD & CO., Ltd., to establish Branch Offices in that district at 43 OLD QUEEN STREET, S.W., Messrs. W. HAY FIELDING & CO. becoming the representatives for all business purposes.

The Birmingham Offices are at 102 COLMORE ROW.

AGENTS FOR THE COLONIES.

MESSRS. GORDON & GOTCH,
Melbourne, Sydney, Brisbane, and Perth, Australia; Wellington, Christchurch, and Auckland, New Zealand; Launceston and Hobart, Tasmania.

Telephone No. 4725 Holborn.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

TENDERS, ETC.

* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

COMPETITIONS OPEN.

BRISTOL.—Aug. 23.—The Bristol Corporation offer premiums of fifteen, ten and five guineas for sketch designs for residential buildings on their country estate. Limited to architects practising in Bristol. Mr. E. T. Taylor, town clerk.

MARPEDO WHITE JAPAN

SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

TRADE NOTES.

MESSRS. M'DOWALL, STEVENS & CO., LTD., Glasgow, have secured a contract from the Caledonian Railway Co. for the supply and erection of ornamental screenwork for the extension of the bridge over Argyle Street.

A new clock has just been erected in Yoxall Church, Staffordshire, by Messrs. John Smith & Sons, Midland Clock Works, Derby, which shows the time on one 8-foot dial, and is fitted with all the latest improvements and has been made to the designs of the late Lord Grimthorpe. The same firm made the clocks for the neighbouring churches of Barton-under-Needwood and Newchurch Needwood a few years ago.

MESSRS. GEORGE MILLS & CO., Globe Ironworks, Radcliffe, have received the following letter from Messrs. Wales, Ltd., Birmingham, respecting the action of their "Titan" sprinkler:—"Sirs,—We had a slight fire this morning (July 26) and your sprinkler installation acted admirably and with efficiency.—Yours truly, per pro Wales, Ltd., R. Thompson, Engineer."

THE Bournemouth Corporation having decided to instal two lifts for the purpose of carrying passengers from the cliff to the beach level, one opposite Meyrick Road and the

other by the side of Highcliffe hotel, the contract for them has been given to Messrs. R. Waygood & Co., Ltd., who erected in 1885 a similar lift for the Folkestone Lift Company, and another on the same principle also at Folkestone has been recently completed. The lifts are worked on the water-balance principle with tanks fitted beneath the cars, and sufficient water is admitted into the tank beneath the upper car to raise the load in the ascending car.

CORRESPONDENCE.

SIR,—We note with pleasure the notice in your issue of 27th ult. of the Kinnear radiator. We think it well, however, to point out an error in the statement of weight. In comparison with cast-iron, there is said to be one-fourth less weight. The statement should be that they weigh less than one-fourth.—Yours faithfully,

For ARTHUR L. GIBSON & Co.,
F. Pope.

London, W.C. : August 1, 1906.

BUILDING AND BUILDERS.

THE Tylers and Bricklayers' Company have placed one of their almshouses at the disposal of the Builders' Benevolent Institution for the benefit of a pensioner of the charity.

THE Preston Town Council have decided to proceed with the erection of new baths. The present baths, which were erected in 1853, were condemned as insanitary and providing insufficient dressing accommodation.

THE Newbury Town Council have adopted a recommendation that they should erect a new mixed school to accommodate 624 of the older scholars. The entire cost is estimated at 9,987*l.*, of which 8,358*l.* represents the outlay on the structure.

EDMONTON District Council recently repaired their three workmen's dwellings by direct labour, and provided 35*l.* in the estimate for the purpose. This amount has been exceeded by 16*l.*, 46*l.* having been spent in utilising 5*l.* worth of material. This sum exceeds the total rent of the cottages for the year.

The London Municipal Society claim that contractors are doing work in London at a very much lower rate than the works department of the County Council. A number of undertakings are quoted for which the contractors' tenders amounted to 1,841,238*l.*, while the estimates on which the department worked came to 342,667*l.* more, equivalent to 15.69 per cent. excess over the sum for which private firms would have done the work. It is pointed out that "London will never know what it has had to pay through the London County Council works department, and that there will never be a fair test of the relative merits of contract and works committee work until the works department is forced to tender in competition with contractors for London County Council work."

The Acton Council have adopted the amended scheme for the erection of municipal buildings at a cost of 35,000*l.* The architect, in submitting this schedule of accommodation, states that the estimate of cost works out at just under 35,000*l.*, if cubed at 1*s.* 4*d.* per foot, which is the figure the original scheme worked out at, priced on the lowest tender received. But the committee are of opinion that if the buildings are finished in a suitable manner without any unnecessary elaboration, the total cost of the buildings would probably be under the amount named. The present intention is simply the erection of the municipal offices and council chamber, but there is ample room left for the erection of a town hall as a separate building at some future period should the Council desire it.

The works committee of the London County Council in their half-yearly return show the financial result of works

completed by them during the six months ended March last. The statement covers seventeen works, and although the cost in two cases has exceeded the final certificate, the net balance of cost below certificate value is 52,589*l.*, the items being as follows:—Final certificate, 338,239*l.*; actual cost, 285,649*l.* In the two cases where the amount of cost is above the final certificate the excess only amounts to 335*l.* The turnover of the department for the year 1905-6 was 650,000*l.*, and the number of estimated works referred to the committee for execution and not yet included in the half-yearly statements of completed works submitted to the Council is thirty-six, representing an estimated expenditure of approximately 1,456,000*l.* In addition, works to the estimated value of 20,000*l.* are in course of execution on the basis of actual cost. On the jobbing works reported upon, there has been a saving of 2,037*l.* on works estimated to cost 32,308*l.* The chief saving mentioned in the present statement has occurred over the work connected with the formation of the new street from Holborn to the Strand and the construction of the tramway subway.

ELECTRIC NOTES.

A LOCAL GOVERNMENT BOARD inquiry was held at the Guildhall, Derby, by Mr. J. Tulloch, in respect to an application by the Corporation for sanction to borrow 8,490*l.* for the purposes of electric lighting. The intention is to light Upper Dale Road from Normanton hotel to Cavendish hotel, along which road electric tramways have been constructed, in a similar way to that in which other tramway routes are illuminated.

The West Ham Corporation have decided to apply to the Local Government Board for sanction to borrow 75,651*l.* for their electricity undertaking. Some time ago an application to borrow 77,000*l.* was made, and at the inquiry the inspector elicited that the proceeds of a previous loan had been diverted. The application for 77,000*l.* has now been withdrawn in favour of one for 75,651*l.*, which sum is made up of 58,017*l.* for electrical purposes, and of two sums—4,308*l.* and 13,326*l.*—"excess expenditure" at the Abbey Mills and the Canning Town generating stations.

DURING the year ended March last the London County Council's tramways on the south side of the Thames earned 782,210*l.*, 626,860*l.* being the receipts from the electric cars and 155,350*l.* from the horse cars. The working expenses amounted to 361,755*l.* The gross surplus of receipts over expenses was 220,454*l.* Debt charges amounting to 174,863*l.*, and a provision of 8,000*l.* for income tax, had been set against the 220,454*l.*, and 35,000*l.* had been transferred to the renewals reserve fund, leaving a net surplus of 2,319*l.* to be carried to the appropriation account. This compares with a net surplus of 7,054*l.* in 1904-5, when the same amount was set aside for renewals, and other special charges were made. The total receipts had been 100,114*l.* more than in 1904-5. The total number of passengers carried during the year was 183,512,421, and the number of car miles run was 15,578,793. The number of passengers is 18½ millions more than last year.

THE tramway committee of Edinburgh Town Council have considered offers from companies for the construction and working of tramway lines in the city. The committee unanimously approved generally of the policy of utilising outside companies as pioneers in erections where the present lessees are not prepared to go, but in order to have before them detailed information to enable them to judge of the matter fully they appoint a sub-committee of six, along with the town clerk, to consider and bring up a report upon the subject of the lines deemed necessary for linking up the present system, including the lines recently authorised, and for providing lines in or in connection with the districts around the city, and with that view to confer with any outside company or companies or with local authorities or other parties interested, and to ascertain terms upon which this might be arranged.

A SPECIAL correspondent of the *Pall Mall Gazette* says there are some extremely interesting developments taking place in Manchester in regard to the supply of electric current for power purposes from the Corporation generating station. The great locomotive building and engineering firm of Messrs. Beyer, Peacock & Co., Ltd., at Gorton, have been experimenting for some time past with a dual power supply—one obtained from a steam plant of their own, and the other, of 500 horse-power capacity, obtained by the transformation of high current got from the Corporation to

a serviceable voltage. The firm now have found the use of the Corporation current so economical that they have decided to abolish their steam plant entirely, and to take all their power from the Corporation. Other great firms are taking large supplies of electrical current from the Corporation. The Manchester electricity department is already far and away the biggest of its kind in the country. It sold seven million units for power purposes last year, and had a total output of over forty million units, which is larger than the output of any two other similar undertakings in the country, leaving out Liverpool (32 million units) and Glasgow. In the present year the extra demand for power has made already such a huge jump that the figures of last year are almost useless for comparison.

VARIETIES.

THE Kent education authority propose to erect a large secondary school for the education of girls.

THE first sod was cut last week on the site of new sewage works which are to be constructed for the Huddersfield Corporation at Cooper Bridge at a cost of 150,000*l.*

THE Herts County Council has decided to take over and maintain at the county's expense the obelisk at Barnet, which was erected in 1740 to commemorate the battle of Barnet, fought in 1471.

WORK in connection with the Avonmouth new dock has so far advanced that the building of the lighthouses is to be put in hand forthwith. The principal lighthouse will be on the north pier at the entrance to the dock.

M. MONOD, a French engineer, has prepared plans for the construction of a tunnel through Mont Blanc. The cost of the undertaking is estimated at 2,000,000*l.* Geneva will contribute 400,000*l.*, and the remainder will be guaranteed by French and Italian financial establishments.

THE Greenwich Borough Council at its next meeting will discuss a proposal to introduce ozone, electrically produced, into the sewers, together with sufficient movement and regulation of the sewer air by means of electric fans with a view to its purification.

VOLUME LXXV. OF THE ARCHITECT.
Handsomely bound in Cloth, Gilt Lettering, price 12*s.* 6*d.*
Imperial Buildings, Ludgate Circus, E.C.

MESSRS. HERBERT WALKER & SON have been instructed by the Louth Town Council to prepare a report as to the best system of drainage for the town. The fee is to be 25 guineas, the same to merge in the commission in case they are instructed to carry out the scheme.

THE General Post Office having offered the Brighton Town Council the sum of 49,000*l.* for the Brighton municipal telephone undertaking, the offer has been accepted. The total loss on the transaction to the ratepayers will be 2,500*l.*

THE annual report as to the progress of the Ordnance Survey mentions that three complete survey sections, composed of officers, non-commissioned officers and men of the Royal Engineers, are held in readiness for service with an army in the field to carry out such surveys as may be considered necessary during the progress of a campaign.

THE Court of Common Council have referred for consideration a letter from the London County Council asking whether, in the event of the Council agreeing to promote legislation to enable it to make regulations to govern the breaking up of streets, the Corporation would be prepared to support the Council in its application.

THE subways provided in the City of London for pedestrians have proved a failure, statistics showing that, except for passengers going to and from the tube stations that are concentrated at the point, the Mansion House subway is deserted. The Corporation has accordingly decided not to go forward with the construction of the contemplated subway under Liverpool Street.

THE Staffordshire education committee have decided that as the Duke of Sutherland has stated that he was not prepared to offer Trentham Hall to the county as a training college for women teachers, and having regard to the information contained in the director's report, they will not accept the offer of the hall as a college for technical and higher education.

At the Manchester town hall on the 31st ult. Mr. A. A. G. Malet and Dr. T. Thomson, Local Government Board inspectors, conducted an inquiry into the application by the City Council for sanction to borrow the sum of 83,737*l.* for the purposes of sewage disposal, the purchase

of land and the construction of second-contact bacteria beds in the township of Davyhulme.

THE Lincoln City Council, at a meeting on Friday, the 3rd inst., will consider two recommendations from the waterworks committee, namely, the construction of a water tower in the Above Hill district, capable of holding 300,000 gallons, at an estimated cost of 7,000*l.*, and the building of a new covered reservoir, capable of holding 8,000,000 gallons, on the top of the Cross o' Cliff hill, at an estimated cost of 31,500*l.*

A MOTOR-DRIVEN street sprinkler has been placed in service by the Metropolitan Park Commission of Massachusetts. The sprinkler tank is carried on a 3-ton Atlas motor truck equipped with a 24 h.-p. two-cylinder opposed gasoline engine, that carries fuel supply for 200 mile runs. The motor-driven sprinkler has demonstrated its ability to do as much work as three or four sprinklers drawn by horses.

THE South-Eastern Railway Company at their half-yearly general meeting, on the 31st ult., authorised the directors "to apply so much as may be necessary of the reserve fund to the payment of this company's proportion of the payment of 20,000*l.* to Mr. Cyril Maude in respect of his and other interests in the Avenue Theatre, and to any other payments in connection with the Charing Cross Station roof accident."

MR. HARRISON, borough surveyor to the Southwark Borough Council, has reported that the number of vehicles passing the Elephant and Castle during two periods of observation was on an average 2,154 per hour, or nearly forty a minute. The Council desire to construct subways at that point for the convenience of pedestrians. They have asked the County Council to contribute two-thirds of the entire cost, which is estimated at 13,000*l.*

MR. ARTHUR BAILY HAMMOND has been elected the master of the Carpenters' Company for the ensuing year. Mr. William Robertson, Lieut.-Colonel A. C. Preston and Mr. Maurice H. Pocock have been chosen as wardens. The Joiners' Company have elected the following officers:—Master, Mr. George Evan-Evans; upper warden, Mr. Benjamin Charles Turner; renter warden, Mr. Arthur Bedford; and clerk, Mr. Henry L. Bedford.

SAMPLES ON APPLICATION.

THE memorial-stone laying ceremony of the Hertford Baptist church took place on the 26th ult. The church, which has been designed by Messrs. G. Baines & Son, 5 Clement's Inn, W.C., is being erected at a cost of 2,251l. by Messrs. F. Wood & Co., of Luton. It will accommodate about 471 persons. The building is designed in Late Gothic, freely treated. Vestries and offices are included in the scheme, also alterations to the existing school.

THE Secretary of State addressed last month a letter to the Birmingham town clerk, asking for the views of the Council as to the desirability of applying similar provisions to the rest of the country as were already in force in the City of London, enabling coroners to hold inquests into the origin of all serious fires. The Birmingham watch committee have instructed the town clerk to report in favour of the scheme.

THE Coventry Corporation require an increase of about 200,000 gallons a day to their present water-supply. Mr. C. Hawkesley, whose firm carried out the Whitley waterwork scheme for the Corporation, considers that an additional supply might be sought for in the neighbourhood of Weston-under-Weatherley. He anticipates that at least 1,000,000 gallons of water per day might be obtained, the distance from Coventry being about seven miles.

THE convener of the municipal buildings committee of the Glasgow Corporation, in answer to a question as to the total amount expended upon the repair and renovation of the Municipal Buildings up till May 31, 1906, how many years the contractors had been engaged in the work, and when it was expected the work would be finished, stated that the sum expended had been 25,500l. The contractors had been engaged in the work for five years, and there was a likelihood of it being completed within the next three months.

THE Bridlington Town Council have instructed Mr. Bowcroft, engineer, Hull, to prepare alternative plans and specifications for pumping machinery to provide for steam and suction gas-driven plant at an estimated cost of 8,500l.; also for deepening the well at the higher waterworks at an estimated cost of 650l. The borough engineer has been instructed to prepare plans and specifications of the engine-house and boiler-house at the higher works at an estimated cost of 2,350l.

THE Secretary of the British Iron Trade Association in his annual statistical report on the home and foreign iron and allied industries for the year 1905 records an improvement of British trade in almost every particular. Our production of pig-iron, Bessemer and open-hearth steel, finished iron and tinplates materially increased, and in the more important branches of the industries dealt with the output of materials exceeded that of any previous year. Our iron and steel imports in 1905 were the largest on record. The home consumption of iron and steel in the United Kingdom continues to increase.

THE Surrey County Council on the 31st ult. received the report of the county surveyor on the result of the experiments—conducted at a cost of 2,000l.—to grapple with the motor dust nuisance. On the whole, he said, they had not been satisfactory. Tarmac, aconia, and tarring the roads had been tried. The last appeared to be the best and most economical method. "I think roads through the country, such as the Portsmouth Road," said the surveyor, "will soon become locomotive tracks, and, apart from the intolerable nuisance caused by dust, the roads will be unsafe for the cars themselves, and absolutely dangerous for every other kind of traffic."

COLONEL W. R. SLACKE, an inspector appointed by the Local Government Board, held an inquiry at the public buildings, Oldbury, on the 30th ult., into the application by the Oldbury District Council for sanction to borrow 38,300l. for the improvement and extension of the Oldbury sewage-disposal works, including the execution of works in the Rowley district. Professor Frankland, in his evidence, said the Oldbury sewage was unique in the whole of the kingdom. It was very difficult to deal with because a large proportion of the sewage was made up of chemical trade waste, which was very dangerous to the bacteriological system. The sewage must be dealt with upon special lines, and this necessitated a considerable outlay. Experiments had been made since 1903, and the present system was considered to be the best.

THE ceremony of laying the foundation-stone of the new Tooting baths for the Wandsworth Borough Council took place on Saturday, the 28th ult., in the presence of the councillors and invited guests. The chair was taken by

Telephone 327 Battersea.

Surgeon-Major Mark Robinson, and the stone was laid by the Rev. J. H. Anderson, M.A., rector of Tooting and ex-mayor of the borough of Wandsworth. Short speeches were also made by Councillor Alexander Glegg, J.P., the mayor, and by Sir Henry Kimber, the local member of Parliament. The architect is Mr. Henry Druery, M.S.A., and the consulting engineer, Mr. E. R. Dolby, M.Inst.C.E., and the cost of the scheme will be about 6,250*l*. The accommodation consists of eight first-class spray and twelve second-class spray baths for men, and eight second-class slipper baths for women.

THE eighteenth report issued by the Labour Department of the Board of Trade on strikes and lock-outs and on conciliation and arbitration boards in the United Kingdom deals with 1905, in which year 358 disputes were recorded, compared with 355 of 1904. The number of workpeople affected showed a slight increase, being 93,503 against 87,208 in 1904, but was lower than in 1905, or any year for which statistics exist. Nearly two and a half million working days were lost as a result of the disputes, of which about one-half were accounted for by the mining and quarrying trades. Questions of remuneration were the most important causes of disputes. The year being one of improving employment, the proportion of disputes arising out of demands for advances of wages showed an upward tendency in 1905. The results of the disputes of the year were, on the whole, in favour of the employers. Most of them were settled by the parties themselves or their representatives. In 1905 the various boards of conciliation and arbitration are known to have settled 839 cases, in very few of which a cessation of work took place.

THE Bill promoted by the London County Council to prohibit the erection of buildings upon a number of open spaces in London in private ownership came before the committee of the House of Commons which deals with unopposed Bills on Monday. Mr. Browne, the agent for the London County Council, explained that this was the third attempt with a measure of the kind. First the Council sought to make the Bill compulsory, but this failed without reaching committee. Then the next session another Bill contained a schedule of all such open spaces in London, and this was circulated among

owners with the intimation that if they wished to have their land struck out of the schedule, excluded it should be. A considerable number did express such a wish and the Bill was amended accordingly. A committee of the House of Lords, however, decided that it was not sufficient that an owner had not expressed dissent; there must be proof that he assented. The County Council, therefore, presented the present Bill, which contained a schedule of 68 gardens, squares or enclosures out of a total of some 400 in London, and upon these patches of land each owner had assented to a Parliamentary enactment forbidding the erection of buildings of any kind. Additions might be made hereafter in another Bill, but meanwhile every owner had consented to his property being scheduled. Formal proof being given, the Bill was ordered to be reported to the House for third reading.

THE Royal Commission on the working of motor cars, in their report dealing with the question of the best type of road, say that, generally speaking, the evidence suggests that the best type of macadam would probably be found to make the most effective and economical road for all kinds of traffic, including both heavy and light motors. Such roads should be made with solid foundations and surfaced with granite or similar hard stone, the binding material being of screened gravel or chippings of the stone used, and being properly rolled in. Roads so made would be able to carry all ordinary heavy traffic, and would produce far less dust than the average principal country roads of to-day. The system of armouring a metalled road surface with stone blocks, known in Germany as "Kleinpflaster," and in Liverpool as "Random setts," was well worthy of careful consideration by road authorities. One thing appeared to be certain, that in order to make the roads more suitable for the traffic of the present day and to maintain them, a considerable outlay was required. As to road administration, the Commissioners express approval of a proposal to devote revenues derived from motor cars to the improvement of roads, and express the opinion that increased license duties should be separately administered by a central department for road purposes, which should make grants to local authorities for road construction and for the reduction of loan liabilities.

DUST PREVENTION ON ROADS.

THE surveyor to the Lancashire County Council, Mr. W. H. Schofield, has prepared a preliminary report on experiments in the prevention of dust which he has submitted to the main roads committee. He points out that "we have neither plant nor workmen directly under our control, and if we were either to purchase plant or employ men directly the grant of 500*l.* made by the County Council would quickly be exhausted, possibly on one or two experiments which might prove abortive. I am therefore forced to confine the expenditure to the trial of materials which have been placed on the market. The experiments which have been conducted throughout England can be classified under three heads:—(1) Palliatives, of which westrumite, akonia, dustroyd, &c., are perhaps best known; (2) painting the road surface with tar preparation; (3) some form of tar macadam or asphalte." He describes experiments made with each of these, and says:—

"Summarising the information which has been obtained up to the present, the use of palliatives such as westrumite, akonia, dustroyd, &c., would entail an additional expenditure of approximately 40*l.* per mile, and as we have 472 miles of macadamised main roads the additional cost to the county would be 18,880*l.* per annum. There are also 957 miles of macadamised secondary roads, which at 40*l.* per mile would mean an additional cost of 38,280*l.* The total additional cost of main and secondary roads together would therefore be 57,160*l.* per annum, and this would leave untouched a very large mileage of district roads, some of which are of considerable importance. The chief advantage of the use of palliatives is that they are generally easily applied, and long lengths of roadway can be dealt with quickly. Repeated applications are necessary, and there is no increased life given to the road to any appreciable extent. Tar painting can only be done successfully in dry warm weather; it is a comparatively slow process, and even if economical it would hardly be practicable to apply it to such a length as 1,429 miles of main and secondary roads. Again, to convert 1,429 miles of main and secondary roads to tar macadam is a task which could only be done gradually, and which must, for financial as well as for practical reasons, be spread over a very considerable number of years."

A BUILDER'S CHALLENGE.

At the last meeting of the Southampton Town Council a letter was read from Mr. John Smith, Avenue House, Southampton, to the Mayor. He said:—"I am very dissatisfied with the treatment I have received from your Corporation for several years past. I believe I have been served with something like forty or fifty summonses since the new by-laws came into force. In my opinion most of these were quite unwarrantable, and only issued to cause me annoyance, and to give the public a bad impression of my work. The last fourteen were of a most trivial character, and eight or nine of these were issued without any permission from your Council. The town clerk reported to the magistrates—no doubt to further prejudice my case—that the works committee wished him to say that I gave them an inordinate amount of trouble, a statement I think you will say was most unfair. I have been under the impression for a very long time—rightly or wrongly—that one member at least of the works committee has been treating me unfairly, and that he has seized, in my opinion, every opportunity to give the Corporation an unfavourable impression of me and my buildings. I should be extremely obliged to you if you can see your way to have the whole matter inquired into, because, if I have been doing bad work, it is only right for the public to know it, but if it is better done than the by-laws require, they should know this also. I beg to make the following offer:—If your worship would kindly appoint one—or more—independent surveyors to examine all the buildings for which I have been summoned, and if he—or they—should find any of them that I cannot prove to be worth 100*l.* at least more than a similar house I am allowed to build which shall strictly comply with the by-laws, I will pay to the unemployed fund of this town 100*l.* for each of such houses. I should be glad if this letter can be read at your next Council meeting, as well as at the works committee."

The town clerk said information was laid in Mr. Smith's cases as in every other case.

It was resolved that the letter should lie on the table.

NOVEL TESTS OF ROAD MATERIAL.*

THE old idea that any stone was good enough to build a road of has been replaced by the knowledge that rocks, even of the same type, vary within wide limits in their physical properties, some of them being quite unsuited for road building. It is evident that in order to keep a road surface compact and in good order, not only must dust be continually worn off to take the place of that removed by various agencies, but also the dust which has formed must be capable of forming a bond between the larger stones which make up the aggregate.

The first attempt to develop a test for cementing value was made by L. W. Page in 1893, working in co-operation with the Massachusetts Highway Commission. In the earlier attempts, the fine dust which was worn off in the abrasion test, and which had passed a 100-mesh sieve was tempered with water and test pieces of varying sizes and shapes were moulded. It was found that neither compression nor tension tests gave satisfactory results, and the method finally adopted consisted in moulding test pieces in a cylindrical die under a definite pressure. The test pieces which were finally adopted were 25 mm. in diameter and 25 mm. high. These little cylindrical briquettes, after being thoroughly and carefully dried, were broken under the impact of a 1-kg. hammer falling 1 cm., the blow being repeated until failure occurred. The details of the method and the machine used have been published in several places and need not be repeated here. In later work the practice of using the dust from the abrasion test was discontinued, and a definite quantity of the stone was ground to a fine powder in a heavy iron ball mill. The fine dust resulting from this grinding was passed through a 100-mesh sieve and the test pieces moulded as described, a hydraulic press being used to apply a definite load at a definite rate.

In the earlier practice it was the custom to make a re-cementation test. The fragments of the briquettes from the cementation test were ground, again mixed with a definite quantity of water and immediately remoulded into briquettes.

* A paper read before the American Society for Testing Materials by Mr. Allerton S. Cushman, Assistant Director, Office of Public Roads.

This was done on the theory that the rock-dust on a road surface is continually being cemented, broken up and re-cemented under traffic. A very large number of tests showed that the re-cementing values in by far the larger number of cases were smaller than the corresponding cementing values. There were, however, a number of cases in which the reverse took place. This is shown in Table 1, in which the cementing and re-cementing values of a number of rock species are compared :—

Table 1.—Comparison of Cementing and Re-cementing Values.

Name.	Cementing Value.	Re-cementing Value.
Diabase (trap)	110	89

Limestone	110	126
Dolomitic limestone	22	30
Hornblende schist	7	9

These anomalous results called for a thorough investigation of the whole question. As it is well known in clay working that the soaking and kneading of a clay for protracted periods increases not only the plasticity, but the binding power, it was suspected that the prolonged action of water on fine rock dust might well increase the binding power, at least up to some maximum value. Investigations were at once begun, to see if the underlying cause of the cementing power could be discovered. It is sufficient to say here that the conclusion was reached that the rock powders which have binding power invariably undergo decomposition under the action of water, the decomposition products forming soft more or less adherent films on the surface of the particles. On drying out this adherent bond locks the particles together. In the case of clays this bond is usually very strong, while with rock dust it is extremely

variable, ranging from those which yield briquettes that break on the first blow to those which will sustain hundreds without failure.

After the observation had been made which led to the conclusion outlined above, it became evident that a modification was necessary in the manner of making the briquettes for the cementation test. Since the bond is developed under the prolonged action of water, it is manifestly unfair to wet the rock dust and immediately mould the test pieces. Moreover, as the action of water begins at once, and according to the laws of physical chemistry, it is more rapid at first, slowing down gradually as the point of completion of the reaction is approached, it is apparent that considerable errors in the results may be occasioned by small variations in time after the wetting of the dust takes place until the briquette is moulded. It will also be shown that with nearly all materials the amount of working or kneading which is done upon the wet mass will effect the softening of the particles, and hence the strength of the bond. These variations were sufficiently large in some cases to account for the anomalous results in the cementation and recementation tests; hence the recementation tests were immediately given up as being of no value, and methods were devised by which the cementation test was improved.

The finely ground and sifted rock dusts were mixed with a sufficient quantity of water, and were worked and kneaded until an even consistency of stiff dough was obtained. From these doughs series of briquettes were made at intervals and tested. There is invariably a rapid rise in binding power in the newly-made doughs, and after the lapse of twenty-four hours the value has, for the purpose of the test, become practically constant. This effect is, of course, more apparent in materials of high cementing value than in lower ones. Numerous experiments have shown that with powders, such as fine sand, which have no particles of a colloidal nature and therefore no binding power, soaking or kneading will not develop the slightest increase. In carrying out the cementation test the doughs were invariably aged for at least twenty-four hours, and the workman was trained to knead the dough always in the same manner for about the same length of time. Careful attention to these details resulted in a great improvement in the value of the test, both in a lessening percentage of

variation in different test pieces of the same series, and also in the agreement of the tests with the results of service.

Rocks are far from being homogeneous materials, and in addition the cementing power itself is such a variable quantity that it may be said that the test has served its purpose if it does no more than distinguish high binding material from that which is only fair, and this in turn from that which has little or no binding power.

Further experiments which were undertaken a little later showed that the binding power is still more increased if the dough or paste of rock dust is kneaded or worked by hand. This is plainly shown by the results obtained on a sample of dolomite, which is celebrated as a binding material in the locality in which it occurs. The most marked characteristic of this rock is the way that its binding power increases after it has been on the road for some time. The results shown in Table 2 were obtained by mixing the sifted dust with water and moulding briquettes of the paste at separate intervals; finally a new lot of the dust was made into a paste and well kneaded by hand for one hour.

Table 2.—Effect of Age of Rock Dust Paste.

" 144 "	.	83
" 8 days old	.	81
" kneaded 1 hour	.	190

It now became apparent that a system of wet grinding would develop much higher values than could be obtained by grinding the sample dry and subsequently mixing with a given amount of water. In order to investigate this point a series of experiments was made in which kilogram charges of rock dust were ground with approximately 20 per cent. by weight of water in a ball mill for three hours. Without exception, the binding power has been increased by this method of procedure, as is shown in Table 3:—

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

It has been shown in previous publications that the binding power of rock dust depends upon the decomposition of the mineral constituents of the rock under the action of water. The decomposition products which are formed principally as films on the surface of the particles may not invariably cause a strong bond of cementation, as they are not all alike in this respect, but wherever a bond is formed it is certain that more or less decomposition has taken place. In view of this it is quite apparent that the effect produced by kneading and wet-grinding is due to the increased action of the water. Under the action of iron-shod traffic a road surface is frequently being acted on by a species of wet grinding, and it is precisely for the reason that automobile traffic has no such action that a new problem has arisen in highway maintenance. The action of water under the roller in aiding the formation of the original bond is well known to engineers, and in macadam construc-

tion the roadway is generally liberally sprinkled while the final consolidation is going on. It would appear from what has been said that in the case of most rocks the more wet rolling they are subjected to the better result.

Lately porcelain pebble mills have been substituted for the heavy cumbersome iron ball mills in carrying out the cementation test. At first some difficulty was experienced in grinding up the material with water to the maximum cementing values obtained in the iron mills. As now carried out the rock dust which has been ground dry in a disk grinder to about 8 to 40 mesh size is transferred to a porcelain pebble mill with sufficient water to make a slip rather than a paste. The mills are about 8 by 10 inches internal dimensions, and are capable of grinding about 1.2 kg. of material. Four kilograms of flint pebbles are used in assorted sizes ranging from about the size of a bantam's egg to that of a boy's playing marble. The mills are revolved at the rate of 50 r.p.m. for four hours. At the end of this time the slip or slime is transferred to a pan and quickly dried to the consistency of a paste suitable for the moulding of briquettes. The great ease with which a large battery of these small mills can be worked at the same time makes it possible to carry on both the routine tests and investigation work with much greater facility.

The latest experiments which have been made have developed a field of investigation which promises to be of great interest both on the theoretical and practical sides. It appears that the addition of lime or limestone will greatly increase the cementing value of an acidic rock like granite.

The results that are shown in Table 4 were obtained by mixing together equal quantities of limestone and granite rock powders of known cementing value and grinding the mixture with water:—

JENNINGS' PATENT "TIP-UP" AND LIFT-OUT LAVATORIES

FOR

Hospitals, Infirmaries, Schools, Hotels, Clubs, Railway Stations, Offices, and every description of Building, Public and Private.

HIGHEST AWARDS AT EVERY EXHIBITION.

The simplicity, freedom from complication, and efficiency has caused this system to be universally adopted, while its cleanliness and saving of time, effected by the instantaneous discharge, is greatly appreciated. The deposit left round the plug hole basins is not only objectionable, but is considered by medical men to be too often the means of communicating disease.

This system has been adopted in Buckingham Palace, Windsor Castle, Marlborough House, and in the Residences of Royalty, the Nobility and Gentry, the principal Clubs, Hotels, Schools, &c., throughout the world, and as a guarantee of efficiency bears the name and address of the Patentee.

GEORGE JENNINGS, LIMITED,
BY SPECIAL APPOINTMENT SANITARY ENGINEERS TO H.M. THE KING,
LAMBETH PALACE ROAD, LONDON.

Telegrams, "JENNINGS, LONDON."

PARTICULARS ON APPLICATION.

3

It is well known to agricultural chemists that the addition of lime and plaster to a soil hastens the decomposition of the natural silicates, thus setting the mineral plant foods free. It would now further appear that the scientific road builder should seek to blend his material whenever such a thing is possible, so as to bring about the greatest amount of decomposition possible among the rock particles on which he depends for the formation of the bonded surface of his road.

MUNICIPAL HOUSING IN LIVERPOOL.

THE housing committee of the Liverpool Corporation have prepared a report in favour of putting into effect the full provisions of the Housing of the Working Classes Act, 1890, and instructing the committee to prepare a scheme for the erection of houses in the outlying districts of the city on land at present in possession of the estate committee or on any other suitable sites. It is stated that the committee have ascertained that during the last five years about 2,000 houses at rentals ranging from 12% to 18% per annum and about 4,500 houses at rentals ranging from 18% to 25% per annum have been erected by private enterprise in the outlying districts. The inability of the Corporation to compete with private enterprise as regards the cost of building for ownership properties of the class proposed, and the fact that both interest and sinking fund charges have to be provided out of revenue, cause the committee to have serious doubts as to the Council being able to offer inducements in respect of rental if the undertaking proposed is to be conducted on a commercial basis. The stringency of the building by-laws in the city has from time to time been increased, and the committee is of opinion that if anything in the direction of more air-space is necessary, it is a matter for the health committee to deal with. Failing a want of accommodation, the committee do not recommend the Council to enter into competition with private enterprise in the direction suggested. The city surveyor also presents a report as to building in the outskirts, which is not favourable to the scheme suggested by Mr. Morrissey. On this question notice of motion has been given by Councillors Lloyd, Kyffin-Taylor and Morrissey to the effect that the housing

committee be instructed to prepare by way of experiment a scheme for building artisans and workmen's dwellings (not necessarily for the dispossessed) in the outskirts of the city, allowing more land, light and air than has been usually provided by private enterprise.

EFFLORESCENCE ON BRICK WALLS.

THE subject of efflorescence has been investigated by Mr. J. C. Jones, of the University of Illinois, who finds the causes of this unsightly appearance to be:—1. Soluble salts contained in the clay as mined. 2. Soluble salts developed in the clay by weathering. 3. Soluble substances formed in the clay during burning, partly by chemical changes among the ingredients of the clay itself, and partly by interaction between the materials of the clay and kiln gases. 4. Soluble salts in the mortar used to bind the bricks in the wall. 5. Soluble substances developed by reactions between the ingredients of the mortar and those of the clay. 6. Soluble salts in the water used in the manufacture of brick or mortar. 7. Soluble salts in the soil or substances lying against the wall. He finds that efflorescence usually is made up of sulphates and carbonates with occasionally salts of other acids which are carried to the surface of the bricks by the evaporation of water which has entered them. The suggested cures are:—1. The use of clay which has not been weathered. 2. To weather the clay and then wash out all soluble salts. 3. To change soluble into insoluble salts by introducing some precipitating agent as barium. 4. To remove efflorescence which has been formed in the kiln by alternating oxidising with reducing conditions during the latter part of the burn. 5. To coat the bricks as they come from the machine with some organic substance. 6. To burn the bricks so that they will absorb the smallest possible amount of water. 7. To coat those portions of the wall below the ground with waterproof paint. 8. To see that the gutters and flues which carry water or steam pipes are so constructed that water cannot reach the walls. 9. To make mortar joints as thin as possible and use mortar which is free from sulphur or nearly so.

THE "DRAWWELL" GRATE

WAS PLACED

First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the
Coal Smoke Abatement Society
In Conjunction with
H.M. OFFICE OF WORKS,
At the New Government Buildings in Parliament St., London.

REPORT

(See page 25 of Supplement in Issue of June 8).

As a final result of the whole of the tests the Examiners find that of the grates submitted those of

Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results. The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear.
N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

GREAT CENTRAL RAILWAY.

They will find it

RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

5 NEW-STREET SQUARE, E.C.

ARCHITECTURE, FURNISHING, DECORATION, FINE ARTS.

E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM. From the water-colours of JEAN BAES. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable towers and charming turrets, so justly considered of the greatest interest. This work consists of 60 coloured folio plates, difficult to distinguish from the original, mounted on handsome cardboard and contained in a rich portfolio. Price £4.

TRAVAUX D'ARCHITECTURE EXECUTÉS EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM. By HENRY BEYRART, Architect. This work contains the most interesting productions of Henry Beyrart, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in two portfolios. Price complete, £14 8s.

L'EMULATION.

A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, heliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

*** As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

COMPETITIONS OPEN.

TRADE NOTES.

THE new schools, St. Albans, are being warmed and ventilated by means of Shorland's patent Manchester grates, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

MESSRS. DICK, KERR & Co. have been successful in their tender for the construction of electric tram lines from Wood Green to the Green Lanes at Enfield. The amount is 65,910/.

EFFICIENT AND ECONOMICAL HEATING.

THE phrase we have used above is taken from one of the numerous testimonials which Mr. Vincent Roberts, of Leeds, has received from one of his customers, who writes:—"I have pleasure in stating that the heating apparatus fixed by you at my house has been most efficient and economical." It is often believed that an inventor, like a prophet, is not honoured in his own country. But the number of houses, manufactories, churches, nurseries and other buildings which appear in Mr. Roberts's pamphlet, descriptive of his system, can be taken as evidence that the people in Leeds and Yorkshire have confidence in his methods of heating. Indeed, one of the satisfactory characteristics of the pages is the demonstration that radiators can be utilised for equable heating

without great expense or a semi-transformation of a building. People put up with much inconvenience from their dislike to have the house in which they dwell pulled to pieces in order that a heating experiment can be carried out. But the letters in the pamphlet show that everything can be accomplished that is desirable without any inconvenience. It is no doubt an advantage for the arrangements for heating to appear on the original plans, but Mr. Roberts can adapt his system to all conditions of old or new buildings. When we find that an immense clothing factory which resembles a colossal conservatory involves no greater expense for fuel during a year than 44l. 14s. 2d., there can be no question of the economy of the system. The pamphlet is also interesting from the large number of photographs which represent the modern architecture of Yorkshire.

THE *Birmingham Daily Post*, in a review of the local markets, says:—"Structural engineers also are busy. There continues to be a good demand for bridge and girder work, but manufacturers still complain of the keenness of competition and the maintenance of high prices for raw materials, which seriously cut into the margin that should be available for profit. It is really remarkable that throughout the whole of the year angles and other constructional material have been maintained at the high-water mark attained in January, when the top of the brief boom was reached. Since then other kinds of iron and steel have slipped back rapidly, but no relief has come to bridge-builders. General engineers are able to speak well of their recent experience."

THE Chief Commissioner of Ashanti in his report for 1905 says that the town of Kumasi is making rapid progress. Building operations in all quarters have been the rule throughout the year, and the majority of the new buildings (European in style, with either iron or shingle roofs) were erected and are owned by the leading Ashanti chiefs. These buildings are in most cases leased to mercantile firms at fair prices, so that the building craze in Kumasi has had the double advantage of securing fixed rentals for the chiefs and of augmenting their interest in the well-being of the town.

BUILDING AND BUILDERS.

THE Emigrants' Information Office warn plumbers intending to go to Canada that information has just been received at the Colonial Office to the effect that a strike of plumbers is in progress at Winnipeg, affecting from 175 to 180 men, and over thirty establishments.

THE erection of the barracks for the ship's company in connection with the Royal Naval College at Dartmouth is to be started forthwith. The hostel for the masters will be ready for occupation in September. It is proposed to build four or five classrooms on the north side of the college and also a library.

THE general works committee of the Coventry Corporation at their last meeting approved of plans for a new gun factory for the Coventry Ordnance Company. The scheme provides for the erection of a large building, 927 feet long by 200 feet wide, together with power-house, boiler-house, gun-pit, &c. Plans were also approved for new cycle and motor works on a site about two acres in extent.

MESSRS. JONES & PRITCHARD, Abergele, whose tender to build the new county police station at Colwyn Bay for 5,900*l.* was provisionally accepted by the standing joint committee of the Colwyn Bay Council, afterwards intimated that they had made a mistake of 1,000*l.* in the amount of the tender, which should be 6,900*l.* An emergency committee by a majority of one decided to accept the next satisfactory highest tender, that of Messrs. Myers & Sons, Chester, the amount of which was 7,498*l.* A long debate among the Council ensued upon this matter, and finally a proposition was carried to the effect that Messrs. Myers & Sons and Messrs. Jones & Pritchard be asked each to send in a new tender.

A THREE-DEPARTMENT school to accommodate 1,200 children has been opened at Bilston. The work of erecting the structures was entrusted to Mr. T. Hardy, of West Bromwich. The total cost of the school, including a site of three acres, is estimated at 17,457*l.* The school is built on the classroom principle, special centres are provided for manual training and cookery, and there is a science lecture theatre. The buildings are fitted throughout with electric light and electric bells, and will be heated on the low-

pressure system. The architects are Messrs. Bailey & McConnal.

HIS HONOUR Judge Lumley Smith heard a case in London in which 250*l.* was claimed as compensation for the death of a man who fell from a telephone pole. The pole was claimed to be a "building," and that the accident came under the Workmen's Compensation Act. Negligence was alleged against the company because, it was said, they did not provide proper and up-to-date methods for ascending the pole. His Honour said he did not think that the claim under the Act had been made out. The pole was attached by a wire to the wall of an adjoining building, and also to the generating station. That did not make it part of those buildings. Even if it were so, there was no employment of any scaffolding. The cleats by which the deceased climbed up were permanent parts of the pole. The rope also by which the deceased slung himself was not a scaffolding, and, even if a ladder was used to enable the workman to get on to the lowest cleat, that could not make the whole a scaffolding. He decided that the accident did not happen during the repair of a building, and that there was no scaffolding. Plaintiff therefore had no case. He decided thus with regret. In the circumstances each party must pay their own costs.

ELECTRIC NOTES.

THE Bury borough engineer is to be instructed to prepare plans, estimates, &c., for the extension of the Bolton Road section of the tramways to Bolton.

MR. SANKEY has been selected out of 248 applications for the post of electrical engineer to the Whitehaven Town Council.

THE National Electric Construction Company have come to terms for the purchase of the Stirling and Bridge of Allan tramway, which is four miles in length and worked by horses.

A SHOPKEEPER of Greenwich displays the following sign in his window:—"Anyone entering these premises after they are closed will receive 800 volts of electricity through them."

SOME of the large German electrical firms have recently established branch offices in Egypt, and are actively canvassing for business, especially in connection with large electrical installations.

A NEW electric tramway connecting Bournemouth with Parkstone, having been inspected by the Board of Trade, was formally opened for traffic on the 3rd inst. The line covers a distance of about two miles and has cost about 30,000*l.* to construct.

THE Midland Railway Company are going to electrify 9 miles of double track on their lines between Lancaster and Morecambe and Heysham Harbour. The trains will be motor-cars, with trailers as required. The electrification is to be completed by next summer.

MR. WILLIAM TAYLOR described to the British Association experiments with a magnetic induction balance used for ascertaining the critical temperature in the heating of steel for hardening. Also a simple magnetic attachment to a muffle furnace used for giving an audible signal when the steel heated in the muffle has reached its critical temperature.

MR. A. WRIGHT, the consulting electrical engineer of the Marylebone Borough Council, reports that he found seventeen different scales of charges in vogue for electric current supplied, and he has devised a fresh tariff abolishing these complications and designed to encourage the use of electric motive-power, as well as enable the smaller classes of shops and private houses to obtain electricity at a price comparable with that of gas.

A NEW method of unshipping tea has just been tried in the London docks. The chests are placed on a system of continuous rollers, worked by electricity, and carried from the ship's hold into the storage shed, without intervention by men or the hydraulic machinery on the quay. The effect has been to eliminate breakages and to considerably reduce the number of men employed in unloading.

THE borough surveyor and electrical engineer to the Burslem Town Council recently submitted a statement showing the estimated comparative cost of pumping sewage by steam and electricity. In giving the cost per hour they only considered the dry weather flow of sewage, and they pointed out that the cost of pumps with engines and pumps

with motors would be approximately the same. The cost to drive one horizontal engine, driving either one 9-inch low-lift pump or two 6-inch low-lift pumps, would be 1*s.* 5*d.* per hour; the cost to drive one 25-b.h.p. motor, driving one 9-inch low-lift pump, would be 1*s.* 2*d.* per hour. With regard to the remaining pumps, which were brought into action in wet weather, they pointed out that their use would be intermittent and the load varying, and showed a further advantage in favour of electricity, because the current used would be in direct proportion to the load, whereas in the case of steam-driven pumps a reserve of steam must always be available. Mr. C. J. Lomas, the engineer for the sewage disposal scheme, approved of the substitution of electricity in place of steam, and considered it would have many advantages and be more economical. It has been agreed that the plant for pumping the sewage is to be driven by electricity.

THE Dalkeith Town Council have agreed not to offer opposition to the Lothians Electric Power Company in connection with the laying of electric mains along certain roads within the burgh of Dalkeith in connection with their scheme, which embraces an area of the greater part of Mid-Lothian (excepting the burghs of Edinburgh and Leith, &c., parishes of Stow, Heriot, Fala and Soutra) and certain portions of East Lothian. The company are to supply electric energy in bulk to authorised undertakers and to persons requiring a supply for power. They shall not supply energy for lighting purposes except to authorised undertakers, provided that the energy supplied to any person for power may be used by such person for lighting any premises on any part of which the power is utilised. The company are not to supply energy, except to authorised undertakers, in any area which at the date of the passing of the Act formed part of the area of supply of any authorised distributors without the consent of those distributors, which consent, however, shall not be unreasonably withheld; but no consent will be required in the case of a supply of energy being demanded from and given by the company to any railway, tramway or canal company, or to the trustees of any harbour or navigation within such area. The company offer that any mains to be laid within the burgh of Dalkeith shall be to the satisfaction of a representative of the Town Council.

VARIETIES.

THE Duchy of Cornwall has granted a lease of 1,500 acres on Dartmoor for china-clay working. The output is expected to reach 30,000 tons a year.

THE Liverpool City Council have agreed to place 20,000/ at the disposal of the baths committee for the erection of public baths at Walton.

THE London County Council propose to erect a new school for 800 children in the neighbourhood of Jubilee Street, Stepney, and to more than double the accommodation of the new school in Tollitt Street.

STEPHENSON'S old railway engine, which was used in the thirties on the line between Canterbury and Whitstable, was formally presented to the Mayor and Corporation of Canterbury by Sir David Salomons on the 8th inst.

A SPECIAL committee of the Grimsby Town Council has under consideration a scheme for a boulevard with a 60-feet roadway and an avenue of trees to stretch half-way round the town along the Weelsby Road.

THE Chesterfield Rural Council have approved an estimate prepared by Mr. W. Frith, their waterworks engineer, for the supply of Eckington and Staveley with water from Barbrook reservoir. The cost is 5,500/.

AN inquiry has been held in Dublin respecting an application of the Corporation for authority to borrow 52,000/ to complete the main drainage of Clontarf, which

is one of the suburbs. The plans were prepared by Mr. G. Chatterton, of Westminster.

THE Sutton education committee have protested against the proposal of the Town Council to confine invitations to tender for the erection of a boys' school in Victoria Road to builders in Sutton Coldfield. The committee urge, "That tenders be invited by advertisement for the erection of the new school for boys in Victoria Road from builders living within a radius of twelve miles from the site."

At the last meeting of the Stourport District Council specifications for the new sewage scheme were received from the engineers, and the clerk said everything was now in order for inviting tenders. But one of the members said they could not let a scheme which might cost 20,000/ go through without examining the specifications, and it was decided that the sanitary committee should go through the specifications and report to the October meeting of the Council.

THE Royal Marine Artillery technical committee invite the co-operation of employers in the furtherance of their scheme by which soldiers are qualified for skilled labour so as to be able to support themselves on leaving the Army. The committee want the help of employers, and "will guarantee to train men in a great variety of branches up to any required standard as soon as employers will say (a) which branches they wish taught, (b) the exact syllabus and standard required for each branch, (c) of the men who reach this standard how many they will employ."

It is proposed to span the line of quays or islands lying between the southern peninsula of Florida and Key West, and the work is now being carried out. To complete the undertaking a span of arches seven miles in length must be constructed, supported by masonry columns sufficiently strong to withstand the heaviest waves. The greatest water depths are 23 feet, and the road bed will be carried 30 feet above the sea level. It is also proposed to carry loaded goods waggons by means of packet steamers from Key West to Havana, so that goods can be transported from any part of the United States direct to Cuba without rehandling.

THE Lincoln City Council have resolved "that the construction of a water tower above the hill capable of holding

300,000 gallons of water, at an estimated cost of 7,000*l.*, be recommended; that the present reservoir on Cross-o'-Cliff Hill be abandoned; that a new covered reservoir be recommended to be constructed capable of holding 8,000,000 gallons on the top of Cross-o'-Cliff Hill, at an estimated cost of 31,500*l.*; and that the chairman and Councillors White, Livens and Ruston be a sub-committee for the purpose of electing a suitable assistant resident engineer, to assist the engineer in carrying out the above works."

THE Tunbridge Wells Town Council have resolved:— "That with a view of protecting the chalybeate spring on the Pantiles and preserving the prosperity and character of Tunbridge Wells as an inland watering-place and health resort, it is desirable that the spring and the adjoining properties, together with all necessary rights in, over and under the Pantiles, London Road, Nevill Street and Market Street be acquired by the Corporation on behalf of the public, and that an application be made in the next session of Parliament for an Act for the purpose; such Act to give to the Corporation such powers as are possessed by the public authorities of other inland watering-places with respect to baths, springs, pump-rooms and other similar matters."

THE Grimsby borough surveyor has informed his Council that many men at work on the roads were very old, and totally unable to give a fair return of labour for the wages paid. Others worked hard, and were worth more money than they got. The wages list, nevertheless, was 40 per cent. higher than it should be. The surveyor said he was handicapped by having to find employment for men who had given the best years of their life in other service. He suggested that a standard rate of pay should be fixed, and that in future a standard man should be secured for it. Street scavengers, he thought, should be paid from 4½*d.* to 5½*d.* an hour, and other workers 5*d.* to 6*d.* an hour, and he should be left to grade a man according to his capacities. This suggestion was adopted.

A DISPUTE is pending between the Kingston Corporation and the Surrey County Council with reference to the con-

tribution of the latter body towards the maintenance of the roads in the borough. In consequence of the laying of the new tram lines the Corporation asked the county council for a contribution amounting to 3,217*l.*, expended by them during the last financial year. The county council, being of opinion that a great deal of the work was not properly chargeable to them, offered to pay 1,350*l.*, which the Corporation have refused to accept. The Corporation have intimated their desire to submit the dispute to the arbitration of the Local Government Board, and the county council have expressed a wish that that course be taken.

THE Mersey and Irwell joint committee in their annual report say:—"Further experience confirms the views which the committee have advocated—that methods of treating sewage by artificial means where the land is unsuitable may, if properly constructed and used, be relied upon to give good results. The watershed affords instances of many types of such methods; septic tanks, sedimentation tanks (with and without a precipitant), contact beds (single and double), percolating filters, made with both coarse and fine material and of varying depths. Good results are obtained with all these methods, and the question which one should be adopted in any particular case depends entirely on local circumstances."

AT Tamworth Mr. E. A. Sandford Fawcett, M.Inst.C.E., an inspector of the Local Government Board, conducted an inquiry into the application of Tamworth Corporation for sanction to borrow 20,000*l.* for purposes of sewerage and sewage disposal, and of the application of the Tamworth Rural District Council for sanction to borrow for similar purposes 11,228*l.* for Boleball and Glascote, 10,551*l.* for Wilncote and Castle Liberty, 7,303*l.* for Fazeley, 415*l.* for part of Wigginton, and 233*l.* for part of Amington and Stonydelph. The town clerk explained that the two authorities had formed a joint committee for carrying out joint disposal works, the remainder of the scheme being carried out by the respective engineers. A provisional order had been granted for the acquisition of a site for the disposal works, the cost of the joint works being shared equally between the two authorities.

EXTENSIVE flooding occurred recently in Dundee. In all 100 intimations or claims for compensation were received by the Town Council, and in each instance an examination of the damage has been made and a separate report prepared by the burgh engineer. Where requests were made to clean out flooded properties, whether business premises or dwelling-houses, men were at once despatched to render all assistance. This was done in the interests of public health, and for the purpose of limiting any likely damage as far as possible. In each case where a claim had been lodged intimation had been given that as the flooding was not caused by any act or neglect of the Town Council they would repudiate all liability in connection with the flooding. The committee approved of the report, and formally resolved to repudiate liability and delay further consideration in the meantime.

A SPECIAL meeting of the Stockport Town Council discussed the situation with regard to the Kinder waterworks. It was decided to determine the contract of the engineer (Mr. Ernest L. Mansergh), an arrangement having been entered into between him and the waterworks committee. It was then agreed to determine the contract of Mr. Kellett, the contractor. The complete waterworks scheme, which included three reservoirs, was to cost 819,000*l.* The Kinder reservoir scheme was estimated to cost 248,000*l.*, and was to have been completed in seven years. The Corporation obtained what was considered the best professional advice in the country, and the construction of a stone dam was commenced. The work had been in progress some time before it was found that a satisfactory foundation could not be obtained at the expected depth, and the committee considered that the expense of going deeper would be excessive. It is calculated that 75,000*l.* has already been spent on the stone dam. What will be done after the termination of the contracts has not been decided, but it is not probable that the Corporation will abandon the whole scheme. A modified scheme will no doubt be presented later on.

At the Colne County Court Judge Bompas gave judgment in an action in which the plaintiffs sought an injunction and damages against the defendants, who are cotton manufacturers, owing to inconvenience and damage to their

property caused by excessive vibration from the machinery at the defendants' mill, to which the plaintiffs' property is adjacent. His Honour said that if the vibration caused by the defendants' works were such as would cause serious inconvenience to an ordinary person, then the plaintiffs were entitled to relief, and that relief would have to be in the form of an injunction. But unless the annoyance was serious the defendants were entitled to succeed. After giving the question consideration he had come to the conclusion that the annoyance was not serious. It was admitted that the walls were not cracked, or the china broken, or the plaintiffs made ill; it was only a cause of annoyance. He thought that the plaintiffs, from having been constantly watching for the annoyance had probably become nervously sensitive to it, but this would not entitle them to judgment. And he thought the vibration, in the degree to which it existed, must be treated as one of the minor inconveniences which a person living in such a neighbourhood might be properly expected to put up with. He gave judgment for the defendants.

SIR W. MATTHEWS, who was appointed arbitrator to decide certain disputes between the Scarborough Corporation and the contractor of the Marine Drive at Scarborough, arising out of damage done to the sea wall during the tidal wave of January 1905, and a subsequent storm, has made his award. The contractor claimed that he carried out his contract so far as it related to the actual construction of the wall itself, whereas the Corporation considered that, the sea wall having been shaken and the foundation disturbed during the process of construction, the contractor was bound to carry out works to remedy these defects. The award is to the effect that the contractor must repair a portion of the wall—about 325 feet in length and known as the sack dam section—by the provision of a toe and an underpinning of concrete in mass. The award also decides that the bags of concrete in this portion of the wall are to be removed and the space filled in to the width of 7 feet with concrete in mass. These works are to be carried out by the contractor at his own expense.

THE Admiralty have issued a memorandum explanatory of the recent and forthcoming changes in the administration of the Royal dockyards. The introduction of electric

CHARLTON, LONDON, S.E.

lighting has made it possible to establish a uniform forty-eight hours week throughout the year, instead of long days in the summer and short in the winter at the same wages. A premium system has been adopted experimentally in the dockyards at Portsmouth, Devonport, Chatham and Sheerness, designed to enable expert workmen to increase their pay by completing their work in less than the time allowed for it, the bonus paid being in proportion to time saved. In accordance with the practice adopted, with increasing success by private employers, a scheme has recently been promoted with a view to encouraging workmen to suggest improvements in tools and methods. All workmen are invited to contribute suggestions. The Board of Dockyard Officers sits once a month to consider and adjudicate, and 200*l.* has been authorised for distribution in awards this year.

THE London County Council decided early this year to supplement the old system of apprenticeship by some system of trade schools so as to supply a due proportion of recruits for skilled trades. The Council opened certain trade schools for girls at Easter 1906, and offered a number of scholarships. The Council has arranged to open trade schools for boys, the aim of which will be to give boys leaving the ordinary schools at the age of fourteen to sixteen a thorough preliminary training for certain trades, while at the same time continuing their general education. It is proposed to open the following schools in September 1906:—School of engineering at the London County Council school of engineering and navigation, Poplar; school of engineering at the London County Council Paddington technical institute; and the school of silversmithing at the London County Council central school of arts and crafts. A number of scholarships tenable at the above schools for competition will be offered after the holidays to boys between the ages of fourteen and sixteen who are resident in London, and whose parents' incomes do not exceed 160*l.* a year; they are tenable for two years, and in addition to free education in general subjects and in the trade chosen, carry maintenance grants of 10*l.* the first year and 15*l.* the second year.

THE "Journal" of the British Chamber of Commerce of Egypt contains an article written with the object of showing the growth of German competition in Egypt. In point of

actual turnover, Germany's largest trade with Egypt is in iron and steel goods, the main branches being rolled steel girders, mild steel bars and hoops, together with small portable steel rails. Considering the enormous number of girders imported into Egypt every year, it is much to be regretted that England practically is entirely out of the trade. The German and Belgian prices are much cheaper than those of England, but, in addition, the British standards do not suit the market. In cast-iron tubing Germany finds a serious competitor in Belgium, as the latter is able to send over a lighter and cheaper article. Egypt, however, imports large quantities of gas tubes and water piping from Germany, though England has still a good share of this trade. A trade in which the country under discussion has almost a monopoly, or at any rate by far the greatest share, is the one of supplying small portable steel rails for agricultural purposes. These light tramways for transport-work are becoming more and more in evidence, and large quantities of rails, to say nothing of equipment, annually reach Egypt from Germany. The price is about the same as for girders.

JAPANESE RAILWAYS.

By a law promulgated on March 31, 1905, the Japanese Government have been empowered to purchase within a period of ten years the principal private railways, seventeen in all. These railways have a total mileage of 2,806 miles. The purchase price is to be calculated as follows:—The construction cost up to the day of purchase, multiplied by twenty times the average rate of profits during the six half-yearly periods commencing with the latter half of 1902 and ending with the first half of 1905. Thus, if construction cost is 100,000*l.*, and average profits relative to construction cost have been 10 per cent., then 10 per cent. of 100,000*l.*, 10,000*l.*, and $10,000 \times 20 = 200,000$ *l.* The amount so arrived at will be handed over to the companies concerned in bonds of equivalent face value bearing 5 per cent. interest, which the companies will distribute among their shareholders. Stores on hand are to be taken over at cost price, and paid for in bonds of equivalent value, taken at their current market price.

THE RUBEROID COMPANY, LTD.

THAT excellent material, "Ruberoid," which has been found useful for roofing, damp-courses and various other purposes, has been hitherto associated with Messrs. Robert W. Blackwell & Co., Ltd. They have recently disposed of the "P. and B." (insulating paper) and Ruberoid departments to the Ruberoid Company. All orders reaching Messrs. Blackwell & Co. after July 31 will be transferred to the company. Starting under such exceptionally favourable conditions the Ruberoid Company, whose address is Waterloo House, 81-83 Knight-rider Street, London, E.C., should be able to extend the use of a material which has been found by experience to justify all that is claimed for it, and of which the qualities have been recognised by the awards of all the international exhibitions since 1893. There is also the advantage of having as managing director Mr. Edgar R. James, who was the joint managing director of Messrs. Blackwell & Co. The company will have at disposal large stocks of "Ruberoid" roofing, "Ruberoid" dampcourse, "P. and B." insulating papers and paints, "Giant" building and damp-proof papers, in London. Every condition is in favour of the company, and under such circumstances success may be said to be guaranteed.

WARING & GILLOW, LTD.

The ninth annual meeting of the shareholders in Waring & Gillow, Ltd., was held on the 2nd inst. at the new premises in Oxford Street. Mr. S. J. Waring was able to announce that the profits were 30,000*l.* in excess of the previous year. They were able accordingly, in addition to paying the regular dividends on the Seven per Cent. Cumulative Ordinary shares for past year, to carry 30,000*l.* to the general reserve, and also to bring forward nearly 15,000*l.* to the credit of the present year's accounts. In addition to the reserve, amounting to 145,000*l.*, they were also building up substantial reserves in Messrs. Hampton's, the Waring-White and other subsidiary companies, and have carried forward to their reserve for the past year an amount almost equal to their own. Respecting the Waring-White Building Company, it was proved by the actual results that it is undoubtedly the most scientific and economical building organisation in Great Britain, and has met with a degree of success which is almost phenomenal. The new Warings, judged by the experience of several weeks, was not only a success, but proved that the expansion in the general trade was four times greater in general volume than had been anticipated. It was not merely a spasmodic leap at the outset, but a gradual and steady weekly increase of business which set in from the opening week for sales. In fact, with the object of keeping their reputation clear and of preventing disappointment, they have not only had to claim the indulgence of their customers, but in some cases even to decline orders.

The new building, vast as it is, has been required almost exclusively for modern work, and it has been necessary to keep on No. 181 Oxford Street for the antique department, which they were desirous should rank second to none in Europe. Their most sanguine expectations had been largely exceeded, and the success of their enterprise had clearly established the fact that they were catering for a demand which existed, but which for the want of proper exposition had found no adequate voice.

The results already obtained have demonstrated that the time was ripe for this new movement of popularising art and beautifying the home. The principles on which they will continue to conduct the business may be briefly sum-

marised—good design, sound workmanship and economical cost.

The Chairman also announced that the services of Mr. H. Gordon Selfridge had been secured, and he would bring to the conferences a consummate knowledge of the methods of retail trade which in the United States have distanced all competition.

A vote of thanks to the Chairman was carried with enthusiasm.

WORKMEN'S COMPENSATION.

THE Home Secretary has appointed a departmental committee to inquire and report what diseases and injuries, other than injuries by accident, are due to industrial occupations, are distinguishable as such, and can properly be added to the diseases enumerated in the third schedule of the Workmen's Compensation Bill 1906, so as to entitle to compensation persons who may be affected thereby. The chairman of the committee is Mr. Herbert Samuel, M.P., Parliamentary Under-Secretary of State for the Home Department; and the members are Professor Clifford Allbutt, F.R.S., Regius Professor of Physic at Cambridge University; Mr. H. H. Cunynghame, C.B., Assistant Under-Secretary of State, Home Office; and Dr. T. M. Legge, Medical Inspector of Factories. Correspondence on the subject may be addressed to the secretary, Mr. F. L. D. Elliott, of the Home Office.

BUILDERS' FEDERATION.

A GENERAL meeting of the National Federation of Building Trade Employers of Great Britain and Ireland was held last week in the Mansion House, Dublin. The president (Mr. George Macfarlane, Manchester) occupied the chair.

The half-yearly report stated that although trade during the half-year had continued depressed, there were some signs of improvement in the demand for builders' work. There had been very few disputes between employers and operatives during the past six months, and none in which the intervention of the executive had been found necessary. Considerable progress had been made in raising the national reserve fund, and there was now on hand a sum of 1,658*l.* 16*s.* 9*d.*, including interest, out of which a sum of 854*l.* 10*s.* was to be paid.

Mr. R. B. Henry, of Belfast, said they had experienced many difficulties in Belfast, amongst them being the question of the contract form, and they had watched with interest the successful manner in which the subject had been approached by the Federation across the water. The special form adopted by the Federation seemed to have become universal throughout Great Britain, with the exception of Ireland, and they as builders in Belfast had approached the architects in this matter, and were still working with a view to a satisfactory solution.

Mr. J. C. White (Belfast) congratulated the builders and contractors of England upon having in conjunction with the Royal Institute of British Architects achieved a clear, well-defined and equitable form of building contract. The form they understood was meeting with general acceptance, and already it had come to be recognised in the English courts of law as a standard document regulating the relationship between building owners, architects and contractors. Decisions were forming on it, and it only uniformity was maintained there would grow round their conditions of contract a body of law that would be of common knowledge, and leave little or no room for disputes and litigation. In Ireland,

The New San Francisco.

TRADE MARK.

WALTER MACFARLANE & CO.,
Saracen Foundry,
Possil Park,
GLASGOW, SCOTLAND.

Telegraphic Address,
"SARACEN, GLASGOW."

Architects and Builders engaged on the rebuilding and requiring best materials should send their orders and enquiries to above.

They hold extensive stocks, ready for immediate shipment, of—

DRAIN and SOIL PIPES (Coated or Glass Enamelled), RAIN WATER PIPES and GUTTERS, CASTINGS for MANSARD ROOFS, ELECTRIC LIGHT PILLARS, CARRIERS, WIREWAYS, &c., while for CONSTRUCTIONAL WORK, VERANDAHS, STAIRCASES, &c., their very large range of PATTERNS for COLUMNS, FRIEZES, and SPANDRILS, being always ready for instant operation, will assure earliest despatch of any work in this way entrusted to them.

however, the matter was still in a state of uncertainty. Until recently in Ireland no serious efforts were made to procure conditions of contract that would meet with universal sanction. Individual architects used various forms, each apparently doing what seemed right in his own eyes. This led to the confusion from which they in England had emerged. Within the past few years attempts had been made in Ireland to arrive at a common understanding, and it might be gratifying to them to learn that the contract which their Federation assisted in forming had met with approval from many architects, and from most builders in Ireland. The Royal Institute of Architects in Ireland, having carefully considered and prepared five different sets of conditions of contract, a majority of their members reported in favour of the adoption of the Federation form, as the basis on which modified conditions of contract should be sanctioned, but the Council of the Irish Institute came to the conclusion that it would be wiser to postpone the adoption of that form until some years of experience had proved their efficiency. The Belfast Builders' Association only differed from that view by stating that the form was sound and equitable, that it had already been under test for over three years, and that as the law regarding these contracts was the same in both countries the form of contract should be also the same. They further thought that there was no good reason for delaying its extension here. The Irish builders believed that the extension and general acceptance of that form of contract would be beneficial to all concerned, and earnestly desired that the Federation would assist in having it adopted. Delegates from several parts of England spoke of the successful manner in which the contract form had been brought into use in various districts.

THE PROBLEM OF THE UNEMPLOYED.*

WHAT do we actually know of, and how should the nation deal with, the classes who do not fit in with the ordinary and normal economic life of society—who do not, as a fact, attain any reasonable standard of life in our *regime* of free competition; the sweated, the casual labourer, the frequently

* From the address to the Economic and Statistics Section of the British Association, by A. L. Bowley, M.A.

unemployed, the permanently unemployed and their forerunner, the underfed and uneducated child? As economists and statisticians we are not concerned with palliatives or methods of expediency, but with a correct knowledge and true diagnosis of the extent of the evils, on which can be built reasoned and permanent remedies.

As is generally the case, our information as to the facts is hopelessly incomplete. There is no agreement as to scientific classification, no complete estimate of numbers; nothing but most limited records, supplemented by ill-informed guesswork. This is the case at the present moment, when public attention has been focussed on these questions for some time. Still less do we know anything about conditions thirty, twenty, or even ten years ago. In these circumstances we cannot say whether the very serious conditions which are obvious at present are better or worse than those of previous decades; whether, for example, the number of able-bodied men who are earning less than 40s. per annum has increased or decreased absolutely or in proportion to the population. Remedies depend not only in extent, but in kind, on the numbers to be dealt with. Private resources may be sufficient to re-establish on a sound economic basis a small number of men who have been unable to weather an economic storm, but quite other means are necessary if a large class has lost the means or habit of earning a livelihood. Similar remarks apply to all the classes to whom I am referring. Till we know the facts we cannot prescribe the remedies, and it is during this period of trade activity that we have the leisure to gather the facts.

To learn the actual economic condition of all the 40,000,000 persons of the United Kingdom, or even of those who are not obviously above any possible poverty line, seems at first sight an impossible task; and so indeed it is, but only because of general apathy as to the subject. We must, therefore, proceed by some method of samples. Before we can get sound information from samples we must have a method of numbering or classification by persons or by districts. If we had a definite system of registration and identification as in Germany it would be easy to choose, say, 1 in 100 or 1 in 1,000 at random from among all the persons whose record satisfied certain conditions, and then to investigate more carefully the history and circumstances of those chosen. A similar method could

be applied to any particular district. There is no need to make a house-to-house visitation to learn the conditions of a district; it is sufficient to enumerate the houses, to choose a certain proportion at random, and investigate carefully the status of their inhabitants. But the area of choice must be coincident with the area to be investigated.

When we have the sample, and have tested its precision by internal evidence, there are still difficulties of classification; but these can be overcome without mathematical analysis.

The economic analysis of these problems is constantly in need of help from statistics. What is the cause of, and what the remedy for the existence of a large body of able-bodied persons frequently out of work or working for a wage below any reasonable standard? The least acquaintance with economic theory will lead us to deny any permanent absence of demand for a large body of existing labour in normal conditions; the difficulty must lie in the unfitness of the supply. The root cause economically is the fact that these persons are not fit for any of the work which society as an organisation needs. The unfitness may arise from the permanent loss of the trade to which the persons belonged; or to mental or physical deterioration following a bad spell of periodic unemployment (a phenomenon to which I return); or may be, and is, I think, more likely to be due to an absence of preparation for any of the employments which need more labour. In fact, it appears that at present in England the demand for labour is not sufficiently definite, and the supply too badly organised to obtain equilibrium.

In a progressive or changing society new trades are continually growing, old trades altering their character or dying out. The latter process does not necessarily nor, I think, generally, mean the throwing out of work of existing employes; it rather means the checking the demand for recruits who should enter the newer trades, which in normal circumstances attract them with higher real wages. There is, however, no information available by which an intelligent artisan can decide into what occupation to put his son. A good deal could be done by mathematical and actuarial work, based on the successive occupational censuses (if these could be improved), to forecast what trades were relatively overcrowded. More could be done by a very

careful organisation of technical schools, directed to educating the young for the trades of the immediate future. At present the choice of a trade is too much a matter of chance, decided by the immediate vacancy in the neighbourhood, or by an ignorant observation of the temporary prosperity of a particular industry. For example, superficial observation suggests that too many lads have entered the building trades in the last twenty years; but, as usual, our sources of information break down when this is examined.

It is true that even at present new trades and growing trades are very rapidly supplied. Skilled labour as a whole is very fluid; witness the manufacture of cycles in the eighties and nineties, the more recent motor-car industry, the great increase in the number of coal-miners. On the other hand, the unemployment statistics in years of good trade show that the process of transmutation is not sufficiently rapid. The possibility of improvement lies in regulating the supply. An even more serious difficulty is that of moving from one grade to another. We are very ignorant on the subject, but it is commonly alleged that the son of an unskilled workman in general must also be unskilled. The father's wages being low, the lad must get to work at once at the first thing that opens. There is a permanent demand for errand and messenger boys, and generally for quite unskilled labour at the bottom of an industry, which if not checked throws a great many young men adrift to begin the world at eighteen in total ignorance of any useful occupation. There is therefore a tendency for a permanent over-supply of the unskilled relative to the skilled. It is not known whether in modern industry the proportions of skilled, partly skilled and unskilled have changed or not. I have not found any significant alterations in such inquiries as I have been able to make. But this proportion is not fixed by any natural law. A deficit of unskilled would soon be supplied by machinery; processes are rapidly adapted to the labour supply. The labour market could readily absorb a greater supply of skilled men, if their skill was that in demand in the growing trades. If we want to check the growth of ignorant and unadaptable labour we must save the boys of thirteen and fourteen from entering occupations that offer no future, and provide them with that knowledge and technique which industry will need five years later. reason why a not unwilling worker cannot find an employer is not the want of sufficient capital but the uselessness of the workman to society. So far we can get by *a priori* reasoning; whether the facts are correctly stated can only be decided by careful inquiry applying the mathematical methods of sampling, averaging and grading. A purely arithmetical inquiry as that conducted at the London Docks by Mr. C. Booth, and at Liverpool by Miss E. F. Rathbone and Mr. G. H. Wood, will, however, throw a flood of light on such a question as to how many men are wanted, and how many in fact are present, in a trade. We may also hope to learn a great deal from a study of the information collected by the various relief agencies in the recent period of unemployment.

The question of periodic unemployment (as opposed to chronic want of work) is easier to handle and is better understood. It is, however, in need of very careful investigation, and I may remark that the most recent inquiry put to me as to mathematical processes related to the question of forecasting the turning-point towards better or worse trade. The cycle of commercial credit, which is very intimately connected with employment, is best studied by index numbers of prices and of quantity, and the most advanced mathematical work done by Section F* related to these numbers. The more the nature of a crisis is understood the better it can be discounted and its worst effects mitigated, and there is some evidence that this is now done. When the recurring wave of unemployment is sufficiently well known proper rates of insurance for want of work can be established, and the very extensive insurance in this direction by trade unions and other bodies can be put on a safer basis. It is a curious point, and one little noticed, that in the high tide of trade work is plentiful and wages high; but prices are also high, and therefore the purchasing power of a sovereign low. This is the time to save, whether privately or in a society, for when the tide falls there is both more leisure to spend and the purchasing power of money is greater. Those whose occupation is affected by the commercial cycle have their salvation in their own hands.

There remain those who are physically or mentally unfit

* Report of Committee on Variations in the Monetary Standard, 1888-90.

for work, who must always be a burden on their more fortunate fellows, and in considering them we pass out of the region of economics. But in this, as in other sociological questions, we still need statistics, perhaps most those methods of measurement we associate with Galton's name, to enable us to understand the magnitude and nature of the burden to be supported.

Again I would urge that in regard to all these questions we are in a condition of great ignorance. If the numbers of unemployed or unfit are increasing relatively to the population at large, the position is very serious and heroic remedies are wanted; but if they are diminishing, while we lament the present evil, we may be hopeful as to the future. What light do statistics, mathematical or otherwise, throw on this question? We know that the wages of regular workers have increased steadily for many decades, whether measured in cash or in purchasing power, and that hours of labour have diminished progressively. The consumption of necessary commodities and of common luxuries has increased more rapidly than the population. Working-class savings and investments have grown enormously. What evidence we have indicates that aggregate wages and aggregate national income have increased at nearly the same rate. Unemployment, so far as it is registered has, period for period, been at nearly the same level for forty years, except that the years of good employment were specially numerous in the nineties. But this is only one side—the visible side—of the picture. For the permanently unemployed and unfit our only records are the singularly inadequate and imperfect statistics of pauperism. We have nothing to go on but guesses as to the real extent of poverty. We cannot recover records for previous years, and statistical science must remain powerless where there are no data. We are not taking any steps as yet to learn our existing condition in any complete way, though the work done in intensive inquiries would have been sufficient, if directed over the whole field, to have given us an adequate sample.

It is because of the immediate and pressing need of information before we commit ourselves to dangerous remedies on an erroneous diagnosis that I have spent my allotted time in pressing the importance of scientific method in statistical research.

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,
SISSONS BROTHERS & CO., Ltd., HULL.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

**.* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

COMPETITIONS OPEN.

BARNSELY.—Aug. 31.—For a high school to accommodate 400 girls. Three premiums of 100l., 50l. and 20l. will be awarded by an assessor. Application before above date to Mr. W. P. Donald, clerk to the Governors, Education Office, Barnsley.

BRISTOL.—Aug. 23.—The Bristol Corporation offer premiums of fifteen, ten and five guineas for sketch designs for residential buildings on their country estate. Limited to architects practising in Bristol. Mr. E. T. Taylor, town clerk.

DUCKMANTON.—A scheme for a model village comprising 500 cottages, clubhouse and shops, for the Brodsworth Main Colliery Company. A prize of 100l. for the best design. Information to be obtained from Messrs. The Brodsworth Main Colliery Company, Duckmanton, near Chesterfield.

MAESTEG.—Aug. 18.—For the extension of the Bethania hall and chapel. Mr. Thos. Rees, secretary, 16 Bank Street, Maesteg.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

STEWARTON.—Aug. 21.—For the proposed cemetery and caretaker's house at Stewarton, Scotland. Mr. James Kerr, F.S.A.A., clerk to the Parish Council, Parish Council Offices, Stewarton.

Your bathroom equipped with
"Standard"
Porcelain Enameled Baths
and One Piece Lavatories
Means Comfort and Health to your Home

"Standard" Ware is sanitary because its snowy surface is non-porous, without crack or crevice for dirt to lodge. The complete equipment can be bought and installed at very moderate cost. A bath-room equipped with **"Standard"** Ware adds a cash value to property far in excess of cost of installation, and brings more comfort and satisfaction than any room in the house.

Write for our elaborate catalogue, **"MODERN BATH-ROOMS,"** also for our special lavatory booklet, showing many new patterns. Ask for Booklet No. 6, post free on application to Dept. F.,

TRADE NOTES.

A NEW company has just been registered, under the title of the Fletton Crown and Crowhurst Brick Company, Ltd., to acquire the Fletton Crown Brickworks and the London and Brighton Brick and Terra-Cotta Company, Ltd.

THE Plum Mill, Heywood, the longest mill in the world, is being protected with sprinklers, and the order has been entrusted to Messrs. George Mills & Co., Radcliffe, to fit the mill throughout with their Mills's modified "Titan" sprinkler.

MESSRS. J. B. JOYCE & Co., Whitchurch, Salop, have received the order for a large striking clock, showing time upon two dials 5 feet diameter, for Claverdon Church, near Warwick. The same firm have a similar clock in hand for Boreatton Hall, Baschurch.

THE new workhouse infirmary, Coventry, is being warmed and ventilated by means of Shorland's double-fronted patent Manchester stoves, with descending smoke flues, Manchester grates and special inlet ventilators, the

same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

WE have received specimens of "Lignomur," which is an admirable manufacture for wall decoration. The relief is sharply defined, and the varieties of patterns are all adapted for the purpose.

THE following firms have supplied their specialties to the new City Hall, Belfast:—Clyde Structural Iron Company, Diespeker & Co., Farmer & Brindley, James Gibbons, Goodall, Lamb & Heighway, Ltd., P. & W. M'Lellan, Limmer Asphalte Paving Company, T. Skidmore & Son.

"MODERN BATH-ROOMS" is the title of a handsome booklet illustrating a great variety of the "Standard" porcelain enamelled baths and one-piece lavatories, and containing useful advice with regard to planning and fitting the bath-room. A copy of "Modern Bath-rooms" will be sent gratis and post free to architects, builders or anyone interested in residence construction or refitting. "Standard" porcelain enamelled goods are thoroughly reliable in material and in service, artistic in finish and design, and withal so moderate in price that their merits are worthy of consideration; for this reason an application for a copy of "Modern Bath-rooms" is to be recommended. The address of the Standard Sanitary Manufacturing Company is 22 Holborn Viaduct, London, E.C.

MESSRS. GEORGE JENNINGS, LTD., hydraulic engineers, of Lambeth, London, have secured the order for the supply, delivery and erection of automatic apparatus at the Crawley and Ifield sewage works. The apparatus comprises four armed revolving sewage sprinklers 67 feet diameter, similar to those in operation at Yardley, Kenilworth, Eastwood, Tenterden, &c. The consulting engineer for the scheme is Mr. Sidney R. Lowcock, M.I.C.E., of 50 Queen Anne's Gate, S.W., and the contractors are Messrs. Edwards & Co., of Granville House, Arundel Street, Strand. By a recent mail the above firm received a testimonial from the consulting civil engineer to the Transvaal Government, stating that the several large sprinklers (Jennings's patent) which have been installed on his recommendation in various parts of the Transvaal have given complete satisfaction.

C. B. N. SNEWIN & SONS, LTD.

MAHOGANY, WAINSCOT, AND TIMBER MERCHANTS,
BACK HILL, HATTON GARDEN; & RAY ST., FARRINGTON ROAD,
LONDON, E.C. Telephone 374 Holborn.

MARPEDO WHITE JAPAN

SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

BUILDING AND BUILDERS.

MR. T. PARKER, building contractor, died at the age of fifty-two at his residence in York. In the course of his partnership with Mr. Sharp he carried out several contracts.

THE plasterers' labourers in Clitheroe struck work in a body on the 9th inst., demanding an increase from 5d. to 5½d. an hour.

ACCORDING to *Kemp's Mercantile Gazette* there were thirteen failures in the building and timber trades recorded during the past week, as against twenty-two last year and twenty-three of the year before in the corresponding weeks.

THE National Telephone Company has purchased a large site at the corner of York and George Streets, Manchester, for the erection of a new telephone exchange. Plans are being got out for an exchange of 10,000 lines.

THE Lancashire Asylums Board have applied for authority to borrow 21,000*l.* for the erection of a new block of buildings at the Winwick asylum, near Warrington. The plans have been approved by the Home Secretary.

THE Chiswick Urban Council invited tenders for the construction of a 36-inch by 24-inch sewer and 16-inch by 24-inch surface-water drain. On being opened it was found they varied from 775*l.*, the lowest, to 1,481*l.*, the highest. The intermediate figures were 1,115*l.* and 1,235*l.*

THE Amalgamated Union of Carpenters, London, have telegraphed to the Toronto carpenters, who are now on strike, encouraging them in the fight they are making against the employers and promising to send them funds from Great Britain.

THE quarterly report of the Amalgamated Society of Carpenters and Joiners states that the cash balance at the end of June was 93,924*l.* 11*s.* 9*d.*, an increase of 8,881*l.* 16*s.* 10½*d.* on the three months. The officials hope that at an early date they will be in a position to revert from the triple levy of 9*d.* a week to the double levy of 6*d.* a week.

DR. MEREDITH YOUNG, the medical officer of health of Stockport, in a report which he has issued, states that the Council will shortly have to face the question of improving the sanitation of courtyards. Infectious diseases, he says,

are undoubtedly more readily communicated from one occupant of a courtyard to another, coupled with the probability that life in such courtyard does not tend to a high standard of morality. The case against such a method of building is irresistible.

ON Monday morning nearly 200 unemployed men drawn from the Finchley district were engaged to commence work for the construction of a reservoir on the borders of Hampstead. When they arrived at the ground the contractor's foreman explained that the payment would be 6½*d.* per hour. A murmur went round, and some dozen men came forward and demanded another halfpenny per hour, refusing to touch a stone until that was acceded to. They laid down their tools and marched off. The remainder drew up an ultimatum and presented it to the foreman, adding that it would expire at ten o'clock. On the stroke of ten, no satisfactory answer being forthcoming, the men left the works in a body.

THE Home Secretary has been pleased to appoint a departmental committee to inquire into the dangers attendant on building operations, and to prepare a draft for regulations embodying the precautions which may in their opinion be desirable for the safety of the workers. The members of the committee are Mr. William Dawkins Cramp, I.S.O., deputy chief inspector of factories (chairman), Mr. John Batchelor (Operative Bricklayers' Society), Mr. E. T. Jessup (Amalgamated Society of Carpenters and Joiners), Mr. William Shepherd (London Master Builders' Association), and Mr. Alexander R. Stenning (Surveyors' Institution). Any communications on the subject should be addressed to the secretary, Mr. Leonard Ward, Home Office, Whitehall.

THE works which are to be erected at the Bute Docks, Cardiff, by the Cardiff Washed Coal Company, will, it is stated, be the largest and most up-to-date coal washing, screening and sizing installation in Europe. They are estimated to cost 100,000*l.* The machinery will be electrically driven. The superstructure will be erected on a reinforced ferro-concrete slab supported by about five hundred ferro-concrete piles driven to a depth of 45 feet.

CATHEDRAL SERIES.—ST. DAVIDS: FROM SOUTH-WEST, SHOWING SOUTH PORCH AND SOUTH TRANSEPT—EXTERIOR, FROM SOUTH-EAST.

ELECTRIC NOTES.

THE Walsall Town Council have received the sanction of the Board of Trade to an expenditure of 28,000*l.*, the estimated cost of reconstructing certain of the tramway lines in the borough.

THE Brighouse Town Council have decided on an electric light and power supply scheme combined with the provision of a destructor for dealing with the refuse, at an estimated expenditure of about 25,000*l.*

THE Beckenham Council find that the adoption of the incandescent gas mantle in place of the old flat flame burner has resulted in a saving of about 55*o*l. during the past four years. A contrast between electric light and gas shows that the comparative cost per mile is 57*l.* for incandescent gas lighting and 57*o*l. for electric arc lighting.

THE cost of mining in Mexico has been diminished by the use of electric power. In the El Oro mining camp power is received over a 200-mile transmission line at 50*o*l. gold per horse-power per year, while the cost of steam power had previously been from three to four times that amount. This has reduced the cost of working the ore from 7*o*l. to 5*o*l. per ton.

THE Marylebone Town Council offer to instal and supply, through wiring contractors, two pairs of 50-watt lamps to any new and approved customer for an inclusive charge of 20*s.* per lamp per annum, to cover the use of the

wiring and the supply of electricity up to 1,500 hours a year. All new lamps are to be paid for by the consumer, and electricity consumed in excess of the quantity named is to cost 1*d.* per unit.

THE fire hazard of electricity as computed from the fire losses in New York City from 1902 to 1905 is very slight as compared with the other causes of fires. The total number of fires traceable to defective electrical wiring or other electrical causes was in that time only 361, which is 1.34 per cent. of the total number of fires; the total loss from these 361 fires was 207,610*o*l., which is 1.15 per cent. of the total loss from fires due to all causes.

MR. J. B. McNAMARA, of Cairo, chief electrical engineer of the State railways of Egypt, has been making a tour of the United States, during which he has inspected the Pennsylvania, New York Central, Long Island and other electrified steam roads. Mr. McNamara stated that the management of the State railways of Egypt has decided to instal a 19-km. single-phase line near Cairo and put a 10-minute service in operation. The road has previously been operated by steam. Bids will be asked for the construction of this line probably in January.

THE fourteenth annual report by the Glasgow Corporation electricity department, which embraces the year ended May 31, 1906, states that the gross revenue amounted to 195,841*l.* 14*s.* 11*d.* and the working expenditure to 91,416*l.* 4*s.* 11*d.*, leaving a balance of 104,425*l.* 10*s.*, out of which the committee had to meet their statutory requirements. After this was done there remained a surplus on the year's operations of 3,808*l.* 5*s.* 9*d.*, which has been transferred to the credit of the reserve fund account, which now stood at 16,913*l.*

INSTRUCTIONS were recently given to Messrs. Laidler & Sons, electrical engineers, New Elvet, to provide a complete installation for Durham Cathedral. A five-light fitting will depend from the inside centre of each arch in the church, and will, it is expected, be ready for use long before the dark days of winter set in. It is conjectured that these will furnish a satisfactory method of lighting both nave and aisles, and leave uninterrupted the view from one end of the noble church to the other. Another advantage claimed is that the light will be thrown where mostly required, just

over the heads of worshippers, the old system being objected to because a flood of light was thrown on the vaulted roof, whilst the floor of the church was, to the disadvantage of the congregation, always in semi-darkness.

THE Leamington Town Council have received from the Board of Trade the memorandum drawn up by Colonel Von Donop, the inspector recently sent down to investigate the complaints as to the shrieking noises made by the tramcars in rounding certain curves in Leamington. He said that the rails at one of the curves were worn away to a dangerous extent, and there were marks of frequent derailments. The company attributed the wearing away of the rails entirely to the action of a few radial axle cars, the wheels of which failed to "radiate." They had already given orders for some cars of rigid wheel base, and were confident that when this was done the wearing away would cease. The inspector agreed to the company's views, and did not think they could be pressed to take further steps at present. With regard to the noise, which was not confined to the radial axle cars, the company could not account for it, but had undertaken to look further into the matter.

THE Board of Trade in their annual report upon the accidents that occurred on the railways of the United Kingdom during 1905 record that within the year 1,099 persons were killed and 6,459 injured by accidents due to the running of trains or the movements of railway vehicles. A table in the return points to the conclusion that experience is gradually making for safety in the management of electricity as a motive force on railways. The table in question shows the number of persons killed and injured in 1905 on the Lancashire and Yorkshire, the London and South-Western, the Metropolitan, the Metropolitan District and the North-Eastern Railways through coming in contact with electric "live" rails. In 1904, when only two of these railways were using electric traction, eight persons were killed and twenty injured in the way named. Last year one servant and one trespasser were killed and thirteen servants and five trespassers were injured on the same railways.

THE United States Consul at Berne gives further particulars of the project for a trunk line called the "Lotschberg," with electricity as motor-power, to pass through the Bernese Alps and connect at Brig with the Simplon, which are published in a report to the Washington Bureau of

Manufactures. The new railroad will require five and a half years to build, and necessitates a tunnel $13\frac{1}{2}$ kilometres long out of an entire length of 56 kilometres. The cost will be over 3,000,000*l.* The steepest gradient will be twenty-seven one-thousandths. It will serve as the most direct means of communication between Northern Italy (Milan, and Genoa) and the vast district lying to the north and north-west of Switzerland. It will shorten the approach to the Simplon, that now must be reached *via* Lausanne, and will compete with the Gothard tunnel railroad. Paris will be 15 miles nearer the cities of Italy than *via* the new Lausanne-Simplon tunnel route, and about 100 miles nearer than *via* Gothard. From Calais Northern Italy can be reached with 52 miles less travel than by Lausanne through the Simplon.

SHEFFIELD City Council have received an interesting report with respect to the maintenance of the existing electric tram system. Sheffield has adopted a universal penny fare from the centre of the city to all suburbs, and passengers are carried in some instances as far as three and three-quarter miles for the penny, a cheaper rate than has been attempted either in this country or on the Continent. The Council find that the income of the undertaking is sufficient for its needs, and that reasonable assistance out of the surplus will probably be available year by year in aid of the rates. It has been decided to establish a renewals fund of 75,000*l.*, and to put aside each year towards renewals an amount equal to 1*d.* per car-mile travelled, which will realise about 26,000*l.* or 27,000*l.* per year. That sum, it is considered, will be sufficient to meet all calls on this account, though it is pointed out that neither Sheffield nor any other city has yet had sufficient experience to guide them to any exact figure.

THE London County Council, in connection with the widening of Hampstead Road at its southern end, found it necessary to acquire the site of the Old King's Head public-house. Claims were sent in by the freeholder and leaseholder amounting to 71,000*l.* After prolonged negotiation, the Council will pay 29,200*l.* for the leasehold and trade interest in the house and 18,000*l.* to the Metropolitan Railway Company, the freeholders.

VARIETIES.

MR. A. CARNEGIE presented to Dundee in 1902 the sum of 37,000*l.* for the erection of district free libraries. Owing to the difficulty of obtaining suitable sites only one building has so far been erected. Last week it was announced that two further sites have been offered free to the Council by citizens.

THE Canadian Manufacturers' Association reports that 6,273 employes are required in Canada, apart from those required by contractors and farmers. In the iron and steel trade 935 workmen are required, chiefly in Ontario, and 102 cabinetmakers. Of the total number 3,394 men are required, 1,231 women, 405 boys and 1,183 girls. The total for the province of Ontario is 3,318, and for Quebec 1,665.

THE Newport works and general purposes committee are of opinion that greater powers should be given to local authorities to direct in what manner building lands should be developed so that streets on different estates should be made to join one another and thus avoid *cul de sacs* and afford better facilities for police supervision, &c. With this object they recommend the Council to urge upon the Association of Municipal Corporations the desirability of having legislation granting such powers to local authorities.

THE opponents of the proposal to erect a new town hall and municipal buildings at Hamilton, N.B., have taken legal opinion on the legality of a recent resolution of the Town Council to defray the cost out of the Common Good. The Council have given their opinion that a town hall cannot be erected without a plébiscite of the ratepayers, and that the resolution to defray the cost out of the Common Good is illegal. They consider that any ratepayer would have a right to challenge the resolution.

THE Local Government Board have several times refused to sanction the plans for additions and alterations to the Rotherhithe infirmary, estimated at an enormous sum. The plans have been revised each time with a view to economy, and the cost has been reduced to 45,000*l.* The Local Government Board, however, still refuse to sanction such an expenditure and suggest a further reduction by 2,000*l.* exclusive of furnishing. They have approved the plans, but subject to the cost being reduced by the amount stated.

THE Board of Education in the course of a communication to the Governors of the New Mills secondary school suggest some of the leading manufacturers might be approached, so as to ascertain in what way courses of work can be arranged for the greatest benefit of workmen and apprentices. Encouragement might best be given by paying the fees of students, or by allowing students time off on the morning following the evening on which they have been at the classes. Both these plans have been adopted by employers in various parts of the country.

THE President of the Local Government Board has refused to alter his decision allowing only twenty-six years for the repayment of the additional 25,000*l.* borrowed to defray the cost of erecting the new municipal buildings at Walsall. The Town Council had Parliamentary sanction to borrow 75,000*l.* for fifty years, but the scheme actually involved an outlay of 100,000*l.*, and the Corporation had urged the Department to extend the period for repayment of the additional loan to that allowed by their Parliamentary powers. The general purposes committee has forwarded to the Local Government Board a resolution strongly protesting against its action, particularly of its refusal to receive a deputation on the subject.

MR. POLLOCK, official referee of the High Court of Justice, who sat for three days at Lincoln recently to assess the damage done by the flooding of Messrs. B. Cannon & Co.'s glue, &c., works at New Boutham in 1903, through the negligence of the trustees of the Lincoln West Drainage Commissioners, South District, has made his award. The plaintiffs claimed 3,700*l.*, and the defendants paid 1,200*l.* into court prior to the hearing of the reference. The official receiver has awarded Messrs. Cannon 1,200*l.*, the amount paid into court. The question as to who is bear the costs of this inquiry will be settled by Mr. Justice Swinfen Eady, by whom the question of the defendants' negligence was decided.

MR. G. H. HILL, engineer, Manchester, has prepared a report concerning the Harrogate Corporation's waterworks undertakings at Masham. Mr. Hill estimates that a further expenditure, from July 12, of 125,000*l.*, after giving credit for the materials on the ground and for the sum likely to be realised by the sale of the plant, will be necessary. total amount of the original loan was 325,000*l.* Up to July 12 there had been spent on the works 280,000*l.*, together with 17,176*l.* in accumulated interest, making the total expenditure 297,685*l.* Mr. Hill considers "that the masonry in the dam should not be raised higher, but must be suspended until satisfactory foundations have been reached at both ends of the trench, and the refilling these lengths has been brought to the level of the masonry now put in. After this it is necessary that the construction of the dam should be carried on right across the valley at about the same level, and breaks in the masonry avoided."

THE Commercial Intelligence Branch of the Board of Trade have received from His Majesty's Consul at Christiania a copy of a notice inviting tenders for the supply to the Government Inspector of Roads and Bridges of about 42 tons of iron framework bridges, and the erection of the same. Apart from the usual Customs duties, a preference of from 10 to 15 per cent. is given to Norwegian manufacturers. In all cases of Norwegian Government contracts it is obligatory that a resident agent should act for tenderers not residing in Norway, and be responsible to the Government, but it is not necessary for the agent to be a Norwegian firm.

In the City of London Court on Tuesday a novel claim for compensation for injuries received was heard. A painter on January 18, when a hurricane of wind was blowing, was walking along West Ham Lane on his way to work. A huge notice-board on the gate of some empty premises announcing their sale by auction was blown down on him, striking him to the ground. For seven weeks he was laid up, and he now demanded compensation. The board had been up for three years. The defendant (who was the auctioneer) argued that the owner of the land on which the board was placed was liable if anyone. The real blame rested with the wind, which was abnormal. The jury found for the plaintiff for seven guineas.

At the next meeting of the Newport Town Council the chairman of the electricity and tramways committee will move that application be made to the Local Government Board for sanction to borrow 10,000*l.*, repayable within fifteen years, for the purpose of providing and supplying electrical fittings, motors, &c. The chairman of the sanitary

committee will move that application be made for sanction to borrow sums of 6,560*l.* and 2,360*l.* for the purpose of constructing main sewers and outfall works in the Malpas and the Caerleon Road districts respectively. The chairman of the education committee will also move that application be made for sanction to borrow 26,000*l.*, required for the provision of higher elementary schools to be erected on the Stow Hill site.

A VERY material extension of the port of Gothenburg is under consideration, and will probably soon be taken in hand. The plan for the purpose of procuring a better bridge connection between the new harbour and the city of Gothenburg, proposes to divert the course of the Gota river for a distance of about a mile and a half some 2,500 feet further north. The new bed of the river, which forms a big curve, will thereby be made to go round the greater part of the new harbour area. A new thoroughfare, principally built as a viaduct, will supersede the present Hising Bridge, and to the west of the viaduct referred to a movable bridge will be built across the old river, which is only about 100 feet broad there, and which bridge it will only be necessary to open for vessels unable to pass under the said fixed bridge, which will probably be some 25 feet above ordinary water-level.

THE Humber Conservancy Commissioners have been informed by officials of the Treasury that the Government had maintained defensive works at Spurn Point under a misapprehension of their liability, and unless the Conservancy Commissioners were prepared to share the future responsibilities the Government would probably decide to abandon the works. They propose transferring to the Commissioners the future maintenance of all needful defences against sea encroachment. The Treasury intended to grant a sum of money to pay for works of defence, estimated to cost about 12,000*l.*, for Spurn, Kilnsea and the vicinity, the money to be repaid. The Conservancy Commissioners have decided to write to the Board of Trade denying any liability, but stating their willingness to send delegates to a conference.

THE Court of Appeal has given judgment in the case of the Manchester Corporation against the Moss Colliery, Ltd. The Corporation originally sued for damage to their Audenshaw reservoir caused by a subsidence of land,

due, it was alleged, to the working of minerals by the colliery company. Mr. Justice Farwell, before whom the case was brought, decided against the Corporation, who appealed. Lord Justice Cozens-Hardy, in giving a judgment with which his colleagues, Lords Justices Vaughan Williams and Romer, agreed, said the mineowners gave notice to the Corporation that they intended working the minerals under land bought by the Corporation from a Mr. Taylor, and the Corporation had the right to say within thirty days whether they intended to purchase these mineral rights, and so prevent the working. They did not do so, but he shrank from saying that would deprive them of their common law right to recover damages for injury to the reservoir, so the appeal of the Corporation would be allowed and an injunction granted. The order, however, would be made without prejudice to the rights, if any, which the defendants sought to assert by counterclaim. The appeal was therefore allowed, with costs. The decision, it was stated, would cover arrangements with respect to other lands purchased by the Corporation.

According to an American Consular report, the use of coloured papers for house decoration, which was scarcely known in China until quite recently, is now becoming general. It is believed that these papers would find a good opening in the country, because in certain towns like Shanghai, Hankow and Tientsin, they would be used not only in the houses built for Europeans, but also in those of the Chinese of the wealthy class who follow European customs and habits. The papers used in China are very varied in colours, qualities, patterns and prices; it is therefore advisable to send the greatest possible variety of samples, and papers representing landscapes, scenes and pictures of Teniers, tapestry, &c., would probably sell best. The frieze, which is placed immediately below the cornice, is generally of a greater depth than that common in European countries, and often measures as much as 15 inches or 16 inches. The best papers represent in these friezes landscapes, seascapes, borders of flowers, garlands, &c.; the ceilings of houses are also covered with paper with a simple pattern on a light-coloured ground. Manufacturers are recommended to send varied and detailed catalogues of papers for walls, ceilings, friezes and borders, with samples at least 15 inches square. At the same time it is a good

plan to send with the catalogues, which should be in duplicate, a small consignment of paper sufficient in quantity to decorate two or three rooms of ordinary dimensions, i.e. 16 feet by 20 feet.

AUSTRALIAN MARBLE.

THE American Consul at Sydney reports that the marble deposits in New South Wales are the finest in the world. Some of the quarries are easily worked without the use of any mechanical appliances and yield large-sized blocks of a good quality. The Consul says that not only are the deposits of variegated marble in New South Wales among the finest in the world, but if properly worked and developed they should give the means of livelihood to thousands of workers in quarrying, carting, working the machinery, &c., not only for local consumption but for exportation. Unfortunately for the industry, the quarries are being worked by bodies of men who have not the funds available for opening up these quarries, and for keeping on hand a sufficient number of blocks of marble to meet a sudden demand, or the properties belong to persons who are too extensively occupied in other directions to admit of their devoting the necessary time to the development of this industry, which, if properly worked, would, it is said, give a better return than many a gold mine. The men, it is added, are working without the necessary appliances, and they have too much unsuitable machinery, without the expert knowledge of the needs and requirements of the market, and have not sufficiently studied the purposes to which marble can be applied.

STRAINS IN IRON.*

FROM the engineer's point of view a much more important matter than fatigue of elasticity is the fatigue of strength that causes fracture when a straining action is very frequently repeated. Experiments which I made with Mr.

* From the address of Mr. J. E. Ewing to the Engineering Section of the British Association.

CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

ARTHUR L. GIBSON & COMPANY,

19, 20 & 21 TOWER STREET, UPPER SAINT MARTIN'S LANE, LONDON, W.C.

Humfrey showed that this action begins with nothing more or less than slight slip on surfaces where the strain is locally sufficient to exceed the limit of elasticity. An alternating stress, which makes the surfaces slip backwards and forwards many thousands or it may be millions of times alternately, produces an effect which is seen on the polished surface as a development of the slip lines into actual cracks, and this soon leads to rupture.

We have therefore to look for an effect equivalent to an interruption of continuity across part or the whole of a surface of slip, an effect progressive in its character, becoming important after a few rubbings to and fro if the movement is violent, but only after very many rubbings if the movement is slight.

That there is a progressive action which spreads more or less into the substance of the grain on each side of the original surface of slip was clearly seen in the experiments referred to. It was found that a slip-band visible on the polished surface of the piece broadened out from a sharply defined line into a comparatively wide band with hazy edges, and this was traced to an actual heaping up of material on each side of the step which constituted the original line.

I think this suggests that under alternating stresses which cause repeated backward and forward slips these do not occur strictly on the same surface in the successive repetitions, and hence the disturbance spreads to some extent laterally. It may be conjectured that slip on any surface leaves a more or less defective alignment of the molecular centres; that is to say, the rows on one side of the plane of slip cease to lie strictly in line with those on the other side. If this occurs over neighbouring surfaces, as a result of slips or a number of parallel planes very close together, the metal throughout the affected region loses its strictly crystalline character, and with it loses the cohesion which is due to strict alignment.

Mr. G. T. Beilby, in a very suggestive paper, has advanced grounds for believing that portions of a metal may pass from a crystalline to an amorphous formation under the mechanical influence of severe strain, as in the hammering of gold leaf or the drawing of wire, and that this occurs in the polishing of a metallic surface, and also in the internal rubbing which takes place at a surface of

slip within the grain. In both cases he suggests the formation of an altered layer. When a polished metal surface is etched the altered layer is dissolved away, and the normal structure below it is revealed.

Without accepting all Mr. Beilby's conclusions, I think the idea of an altered and more or less amorphous layer is supported by the considerations I am now putting forward. We have assumed that in normal crystallisation the inter-molecular forces lead to a normal piling, in which each molecule touches six neighbours. But it may be conjectured that some of them may take up pyramidal piling (touching twelve others) under the compulsion of strong forces—such forces, for example, as act on the superficial molecules of a surface that is being polished.

If this also occurs at a surface of slip, it gives us a clue to several known facts. It at least assists in explaining the familiar result that metal is hardened by straining in the sense of being made less plastic. Again, it accounts for the general increase of density which is found to take place in such an operation as wire drawing. Further, if a local increase of density occurs in the interior of a grain through piling of some molecules in the closer manner where repeated slips are going on, the concentration of material at one place requires it to be taken from another; in other words, the closer piling tends to produce a gap or crack in the neighbourhood where it occurs. This is consistent with what we know of the development of cracks through repeated alternations of strain.

Recourse to the model shows that with pyramidal piling the polar axes point in so random a manner that the aggregate may fairly be called amorphous. To illustrate this a group is shown with centres fixed at the corners of equilateral triangles.

It is obvious that any pyramidal piling at a surface of slip tends to bar further slip at that particular surface. Hence not only the augmented hardness due to strain, but the tendency in repeated alternations to lateral spreading of the region on which slip occurs. The hardness due to straining is, of course, removed when we raise the metal to such a temperature that complete recrystallisation occurs, normal piling being then restored in the new grains.

Taking a previously unstrained piece, it is clear that the facility with which slip will occur at any particular surface

GILBERT WOOD & CO. Ltd., 6-11 IMPERIAL BUILDINGS, LUDGATE CIRCUS, LONDON, E.C.

of slip in any particular grain depends not only on the nature of the metal and on the orientation of the surface in question to the direction of the stress, but also on the amount of support the grain receives from its neighbours in resisting slip there. In other words, for a given orientation of surface the resistance to slip may be said to consist of two parts; one is inherent in the surface itself, and the other is derived from the position of the grain with reference to other grains.

To make this point clear, think of a grain (under stress) in which there is a gliding surface oriented in the most favourable direction for slipping. Slip on this surface can take place only when its yielding compels the neighbours (which are also under stress) to yield with it, and the surfaces in these on which slip is compelled to occur are, on the whole, less favourably situated. Hence the original grain cannot yield until the stress is considerably in excess of that which would suffice to make it yield if it stood alone, or had neighbours equally favourably inclined.

Apply this consideration to the case of steel, where there are two classes of grains: the ferrite, which is simply iron, and the pearlite, which is a harder structure. Slip on any ferrite grain is resisted partly by the strength of the surface itself, and partly by the impossibility of its yielding without forcing slip to take place on neighbouring (harder) grains. Now suppose the structure is a very gross one, such as Mr. Stead has shown may be found in steel that is seriously overheated. On the large grains of ferrite in overheated steel the resistance to slip will be but little greater than it would be in iron, and, consequently, under an alternating stress fatigue of strength, leading to rupture, may be produced by a very moderate amount of load. Mr. Stead has shown how the effects of overheating can be removed by the simple expedient of raising the steel to a temperature sufficient to cause recrystallisation—a homœopathic remedy that transforms the gross structure of the overheated metal into an ordinarily fine structure, where no ferrite grain can yield without compelling the yielding of many pearlite grains. Hence we find, as Rogers has demonstrated by experiment, that steel cured by reheating from the grossness of structure previously produced by overheating, has an immensely increased power to resist the deteriorating effects of often repeated stress.

THE LINCOLN ARTESIAN BORING.*

Down to the present time since the year 1847—when the waterworks were commenced by a public company—Lincoln has depended for its supply of water upon surface streams, impounded into reservoirs and subjected to a filtering process, the quantity dealt with amounting to about 331 millions of gallons a year, with a rainfall of about 25 inches. Needless to say, a supply from such sources was found to be unsatisfactory on the grounds both of quality and quantity. In 1885 Dr. Harrison was requested to report on the former of these subjects, and he produced elaborate analyses, the general result being that, as some of the sources were liable to pollution, the water was unfit for domestic purposes.

Owing to the rapid growth of the city the conditions became more unfavourable, and it was determined by the Corporation to ascertain whether some better source of supply might not be available. With this object the late Mr. De Rance, F.G.S., was instructed by the Corporation to report "on the probability of obtaining a pure and sufficient supply of water for the city." Accordingly he presented a report, dated September 15, 1891, containing the results of a prolonged and careful study of the geological conditions, and stating his opinion that a boring of large diameter to a depth of from 1,250 to 1,500 feet at Torksey or Collingham would yield at least a million of gallons per day of the purest water, also suggesting supplies from the oolite limestone formation.

This report does not appear to have been immediately acted upon, and nothing was done until the year 1898, when I received instructions to report on "the probability of obtaining water by boring near the present pumping-station, and if so, at what depth and at what expense?" After a preliminary survey I recommended a well and boring to be carried down into the new red sandstone, which I estimated would be reached at a depth of about 1,400 feet, from which I anticipated a supply of about a million gallons per day, and that the water would rise in the boring and well up to or nearly to the surface of the ground by hydro-

static pressure. It will be observed that my conclusions went to verify those of Mr. De Rance, both being founded on well-recognised geological data, and they have now been abundantly borne out by actual experiment.

Not until the year 1901, however, was a contract signed with Messrs. C. Chapman & Son, of Salford, for carrying out this, the deepest water boring in the United Kingdom. Nor was it till Sunday, June 10, 1906, that the success of the undertaking was demonstrated, when, on reaching the top beds of the new red sandstone at a depth of 1,561 feet 6 inches, the water burst in with great force, and (to adopt the words of the newspaper reporter) "the roaring sound of rushing waters far below was distinctly heard at the surface, and was likened by one of the workmen to the rush of the eagle on the Trent when the tides are at their highest." From this time the water steadily rose in the bore and well, which is 1,502 feet in depth, at the rate of 12 feet per hour, until it ultimately reached the surface and overflowed, which event took place on the Wednesday morning following the inburst of the water.

The following are the formations passed through:—

	Feet.
Lower Lias clay	641
Rhætic beds	52
Red marl and sandstone (Keuper)	868
Total	1,561

Below the above is the new red sandstone and conglomerate, which reaches the surface in a broad tableland of an average of 300 to 400 feet above the sea-level to the north of Nottingham, and constitutes the source of supply for that town and a large district ranging into Yorkshire. At its nearest border it is about 20 miles from Lincoln, and spreads westward to its margin at Worksop for a distance of five or six miles, receiving and absorbing, probably, two-thirds of the rainfall over its area. Owing to its extreme porosity, its absolute continuity in the direction of the dip of the beds, there being no faults between, and the constantly increasing hydrostatic pressure of the water in the direction of Lincoln, we have all the conditions for a successful artesian water-supply. The success of this undertaking has produced amongst the inhabitants of that important city a

feeling of the greatest relief and satisfaction, which finds expression in the local paper in the words, "Sunday, June 10, 1906, will be a day to be recorded in the annals of Lincoln."

GAS FOR LIGHT, HEAT AND POWER PRODUCTION.

THE question of a cheap and abundant supply of energy is one of vital importance to this country. During the present session a large number of Bills for the supply of electrical energy to London have been before Parliament, and a select committee of the House of Commons has recently presented a special report on the subject. Though not seeing their way to give the London County Council the powers which they asked for, the committee "consider that the provision of cheap electrical power for London is so important and pressing that they do not view with favour the possibility of the question being indefinitely hung up."

While attention has been concentrated on electricity as a medium for the supply of light, heat and power, the claims of gas have been to some extent overlooked, although its field of usefulness coincides very closely with that of electricity. A paper on the subject was read by Mr. A. J. Martin before the British Association at York.

The late Sir William Siemens used to insist strenuously that gas should be used for all purposes in place of coal, the burning of which in its raw state he denounced as "a barbarous practice." The substitution of gas for coal has been greatly impeded by the circumstance that it was first introduced solely as an illuminant, in which light it is still generally regarded. This conception of gas continues to dominate the methods of manufacture and distribution, to the great detriment of users of heat and power.

The main obstacle to the general use of gas for purposes other than lighting is its cost, which varies from 11d. per 1,000 cubic feet (at Widnes) to upwards of 7s. 6d. The higher prices of gas are due to various causes, the chief of which are the standards of illuminating value to which it has to conform, the large capital involved, the disproportion-

tionate cost of manufacture on a small scale and the high prices paid for coal, consequent on the cost of carriage from the collieries. These causes together swell the cost of the gas consumed in this country every year by many millions of pounds. Illuminating standards are now in many cases being relaxed, but not to such an extent as to give the consumer the full benefit to which he is entitled. The effect of high capital charges and that of working on a small scale are automatically reduced with every increase in consumption, and the greater part of the cost of carrying coal may be saved (in the case of London) by making the gas at the pit's mouth and piping it under pressure to the Metropolis. It is well known among engineers that a pipe line is the cheapest means for transporting anything which can be made to flow. This has long been recognised in the case of water, which no one would think of conveying by rail, except on an emergency, such as recently occurred at Lincoln. Water is piped to Coolgardie, a distance of 352 miles, and petroleum over 400 miles to New York Harbour. The advantage of generating power at the collieries on a large scale and transmitting it to the areas of supply has been pointed out by the Royal Commission on Coal Supplies, but in this country proposals of this kind have been directed chiefly to the conveyance of electrical energy from the coal-fields. A proposal to supply the Metropolis in this way was laid before the select committee, who dismissed it as not suitable.

Gas has many advantages over electricity for transmission purposes. It can be conveyed at less cost and at a much higher efficiency; it can be stored cheaply and without loss, and used at any desired rate, and it requires no conversions, as in the case of high-tension electricity. Moreover, even where electricity is required, it will generally be cheaper to convert the coal into gas and pipe it for use in gas-engines than to generate current direct from coal.

Down to very recently the conveyance of gas under high pressures to long distances would have been regarded as impracticable, owing to various difficulties arising from condensation and leakage and to other considerations. Of late years, however, both natural gas and coal-gas have been piped in America to great distances (extending in the case of natural gas to 200 miles) with marked success, and further projects of the kind are under way.

In this country, in the absence of natural gas, either a fuel-gas, such as Mond-gas or water-gas, or coal-gas of reduced illuminating power might be used. The latter could probably be sold in London at something like 1s. per thousand cubic feet, at which price it would displace the greater part of the coal now used for heating and power purposes. The larger cities and towns in Lancashire and Yorkshire, and other districts within easy reach of coal-fields, might also with advantage lay down pipe-lines of their own, but smaller and more remote places could only do so in combination—preferably through a board formed on the model of the Metropolitan Water Board—of representatives of the various Corporations and companies interested.

The inauguration of a general supply of cheap gas would have far-reaching consequences. The smoke nuisance, with its appalling death-roll, would be done away with, and the annoyance and damage to property from smoky fogs brought to an end. A cheap and abundant supply of sulphate of ammonia would come to the aid of our distressed agricultural interests. The most far-reaching effect of cheap gas, however, would probably be in stimulating the establishment of manufacturing plants in rural districts, thus helping to relieve the congestion in our overcrowded towns. No single factor has played so great a part in determining the distribution of industries as the existence of natural sources of power, and with gas at such prices as it could be supplied at from the collieries, gas-power would be even cheaper than water-power.

Last, but in the long run not least, in importance is the part which the substitution of gas for raw coal would play in postponing the exhaustion of our coal-fields.

RADIATION FROM GAS MANTLES.*

As the object of this paper is to stimulate a discussion in order to elucidate the subject, I will state one point of view and oppose some others, inviting criticism, even if quite destructive, and see what happens.

Offices—56 BLACKFRIARS ROAD.

Works—COLLINGWOOD STREET, BLACKFRIARS ROAD, LONDON, S.E.

The ordinary explanation of the great luminous efficiency of the gas-mantle is that rare earths have a property of selective radiation, in virtue of which they send out a larger proportion of their radiant energy in the form of light than ordinary hot bodies.

Other explanations are that there is catalytic action going on; that cerium has two oxides and oscillates between the two states, and this produces the effect.

Another explanation, first given, I believe, by Ram ("Incandescent Lamp," p. 196), is that the Bunsen flame is really very hot, and that the mantle is of such low emissivity that it gets rid of so little power that there is little difference of temperature between it and the flame, and it is therefore hot enough to give the light by pure temperature radiation without any anomaly.

One reason why the simple temperature explanation has been questioned is that the temperature of the Bunsen is generally taken to be much lower than it is. It is generally measured by means of platinum wires or thermocouples. These can never rise to the real temperature of the flame, as they are radiating and must therefore be taking in heat by conduction, in which case they must be cooler than their surroundings.

The simple temperature explanation fits the phenomena. If pure thoria has low emissivity it will rise to a temperature near that of the shell of flame bathing it. Having low emissivity it will then give out little light, but the light will have a large proportion of visible and refrangible rays. If a very little of a body with a high emissivity be added, radiation will increase, but the temperature of the mantle will fall, as there must be a steeper heat gradient to supply it. The total radiation is then increased, and though the proportion which is luminous will be diminished, the total light will be increased. Further addition of the emissive substance increases the total radiation and reduces the temperature until the light given is less even than with pure thoria.

By selective radiation may be meant that a body at the temperature of a black body emits some rays and omits others, or that it has the power of emitting more refrangible rays than a black body at the same temperature. If two black bodies are in a reflecting envelope, at the same temperature, each radiates to the other and absorbs power from

the other. The heat in each is in a state of degradation corresponding to the temperature, and in a state of equilibrium it must be radiated and absorbed by each without further degradation. Heat radiated from a black body into a closed space in equilibrium is thus not degraded. If a body only emits the portion of the rays of high frequency, though it may radiate less power or energy per second, that energy must surely be of a higher grade than that of the black body at the same temperature, because it can be degraded into radiation of lower frequency. If that is so, this sort of selective radiation violates the second law. Emitting more refrangible rays than the black body is worse still. It does not follow from this that a body cannot emit rays of high frequency balanced by another batch at low frequency, so that their degradation corresponds with the temperature. This form of selective emissivity has not yet been invented by the advocates of this theory.

The catalytic action theory is vague. Generally catalytic action merely accelerates a change from unstable to stable equilibrium. It is difficult to see how catalytic action can affect radiation. A suggestion may be made. The gases in the hot shell combine at a certain rate, and the flame radiates heat and comes up to a certain temperature. If the mantle causes quick combination intimately among its own particles, it may be possible that the temperature there may be higher than in the flame itself, so that the mantle may really be hotter than the flame. I have not seen this idea put forward. It is not needed to explain the phenomena, and it would be curious that all the bodies capable of increasing the light of pure thoria should be coloured oxides.

It is sometimes urged that the particles of rare earths have a special way of vibrating in resonance with the particles of hot gas and thus radiate light preferably. This again would mean elevating heat energy to a grade higher than that corresponding to the temperature, without rejection of heat at a lower temperature, a violation of the second law.

The same reasoning holds against the theory that ceria oscillates between two states of oxidation. If it did it could not supply energy by such means, and therefore could not deliver energy supplied as heat at a grade higher than that corresponding to the temperature of the body.

THE "DRAWWELL" GRATE

WAS PLACED

First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the
Coal Smoke Abatement Society
In Conjunction with
H.M. OFFICE OF WORKS,
At the New Government Buildings in Parliament St., London.

REPORT

(See page 25 of Supplement in Issue of June 8).

As a final result of the whole of the tests the Examiners find that of the
grates submitted those of

Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results.
The amount of coal consumed by these grates was found to be moderate in com-
parative proportion with temperature obtained; the fires were bright and clear.
N.B.—Thirty-seven grates were tested, including nearly all the best known
modern types.

RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

VELURE

VELURE

WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable.
Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

WORTH

ONE GALLON
WILL COVER ABOUT
90 SQUARE YARDS

TRYING

WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.
Good after Three Years on Bath.

I may mention that when speaking to Mr. T. I told him how well your Velure had stood on my bath. It was painted about three years ago, and in use practically every day and is in first class condition still: and the holly green which I used for the back of my house is much admired by the builder, and it was put on over some very bad paint and only one coat. J. D. POTTER.
March 17, 1906. 140 Elms Road, Clapham, S.W.
We have hundreds of Testimonials similar to this.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

COMPETITIONS OPEN.

THE Board of Trade have given their sanction to the carrying-out of an experiment in the Llanelly estuary, upon the application of the harbour trust. In order to increase the depth and width of the channel to the sea, the harbour superintendent has devised a scheme for running out a temporary spur of sand-bags from the existing training wall. The object of the experiment is to see whether the waters of the Loughor river can be diverted from their present course into a new channel, the effect of which would be to make a new channel sweeping past the harbour lighthouse. If the experiment proves successful the bags will be removed and a permanent structure laid down on the same line of direction. The harbour trust are acting in consonance with local opinion and against the advice of the expert engineers who have been consulted.

TRADE NOTES.

THE tender of Messrs. Strode & Co., lighting engineers, amounting to 849/., has been accepted for the electric-light wiring at the new workhouse, Isleworth.

MESSRS. PATMAN & FOTHERINGHAM, LTD., have obtained the large contract for rebuilding Gloucester House, Piccadilly, W. (the late Duke of Cambridge's residence), for Mr. J. J. Duveen, of Messrs. Duveen Bros., Bond Street, W. The architects are Messrs. Colcutt & Hamp.

MESSRS. MOLESWORTH & Co., of the Ketton Stone Quarries, inform us they are supplying the whole of the stone now being used in the extensive restorations of York Minster, particulars of which appeared in our last week's issue.

THE Directors of the Manor Mill, Ltd., whose mill is being erected at Chadderton, near Oldham, have decided to protect their premises with automatic sprinklers; the order has been placed with Messrs. George Mills & Co., Radcliffe, the proprietors of the "Titan" sprinkler.

THE business of the Universal Wine Bin Company, formerly conducted at Alfred Road, South Norwood, is now and has for some time past been transferred to 2 Occupation Road, Manor Place, Walworth, S.E., under the auspices of Messrs. J. Stevens & Co.

NEW CATALOGUES.

THE firm of Newton, Chambers & Co. have several specialties. The catalogue of their cast-iron tanks would be remarkable if it were only from the list of large tanks which they have manufactured and supplied. The capacity of those selected amounts to the total of 7,797,800 gallons. Messrs. Dowson, Taylor & Co., of Manchester, purchased no less than 300 tanks, and two were supplied to the Salford electricity power station, each being 97 feet 6 inches by 48 feet 9 inches by 6 feet 3 inches. The list is enough to excite the envy of foreigners. One advantage possessed by the firm is that they have a large and varied stock of patterns of standard sizes. They can be combined with expedition, and there are ribs, flanges and bolts which

correspond with the plates. In that way tanks of dimensions that might be considered colossal can be built up, and if, as happens in some of the colonies, it is necessary to support the tanks on columns and joists they are also at hand. As aids in manufactories and in waterworks capacious tanks are invaluable.

THE style of ornament which found most favour in the eighteenth century is less easy to imitate than most people imagine. The patterns appear to be simple, but they have a peculiar character which is not fully attainable by modern modes of teaching. All who see the grates of the Carron Company might imagine that the style was imitated with unusual perfection. The explanation is, however, that they are produced from carvings by two students of the Royal Academy in the eighteenth century whose names were William and Henry Haworth. The forms of the grates have been altered to correspond with modern desires. But the ornament with which they are adorned is owing to genuine eighteenth-century inspiration.

THE United States Government, with a view to cause paint to adhere firmly to galvanised iron, have recently adopted specifications compelling the use of vinegar for washing the surface preparatory to painting. This is said to corrode or roughen the surface, thus giving the paint better opportunity to adhere.

MR. N. MCK. BARRON, waterworks engineer, Lincoln, has submitted a report to the Lincoln City Council dealing with the present mode of water distribution and the condition of the reservoirs, and making certain recommendations. Mr. Barron is of opinion that the right situation for a new reservoir is on the high ground near Cliff Hill reservoir. This he considers preferable to the Westgate site because of the possibility of utilising the existing mains. It is also pointed out that it would be impracticable to provide a good supply for the county asylum from Westgate. The report, which will be considered at the October meeting of the Council, estimates the total cost of the works recommended at 55,100/.

ELECTRIC NOTES.

THE Surbiton Urban Council have been advised by Messrs. Talbot & Stevenson, consulting engineers, that a further expenditure of 20,000*l.* is advisable in connection with the electric lighting scheme, on which 50,000*l.* has already been spent.

THE Lancashire United Tramways Company have completed their section of the Liverpool to Manchester tramway from Winton to Boothstown. It is now possible to travel by tramcar from Liverpool landing-stage to the Manchester Exchange with two changes. The journey occupies five or six hours, and the route taps a population of nearly one and a half millions of people and includes a score of towns.

THE Yardley District Council were unable to come, on the 21st inst., to a decision on the subject of a recommendation by the tramways and electric-lighting committee, that the Council's undertaking authorised by the Yardley Rural District electric-lighting orders 1904 and 1906 be transferred to the Corporation of Birmingham or to the Shropshire, Worcestershire and Staffordshire Electric Power Company. Negotiations are to be opened up with the Birmingham Corporation.

THE Londonderry Corporation held a special meeting on the 16th inst. to consider a letter from Messrs. White, London, the contractors for the electrification of Belfast trams, to purchase the entire undertaking of the Corpora-

tion, which includes both a public and private lighting installation, which cost over 60,000*l.* The company also offered to promote tramways, electrically propelled, throughout the city, and to give guarantees to satisfy the Corporation and consumers. The proposal was received with favour, and has been referred to a committee to ascertain further particulars.

At the half-yearly meeting of the Midland Railway Company Sir E. Paget, the chairman, in referring to the fact that the directors had decided to electrify that part of their line from Lancaster to Heysham and Morecambe, said:—Up to the present they had been content to see what other people were doing, but, as it seemed to be the general opinion of experts that the locomotive power of the future was likely to be electricity, they thought their own officers should gain the experience necessary to give the advice in the future as to the extension of their electric plant. That part of the line was particularly well adapted for their purpose; they had an electric-power station which supplied electricity for lighting Heysham Harbour, and they could enlarge it more cheaply than they could establish a new one in any other part of the country. No doubt it was an experiment, but it was an experiment which the directors ought to undertake, and even if the whole thing had to be scrapped through electricity not becoming the locomotive power of the future as was supposed, it would not be a heavy burden upon the Midland shareholders.

VARIETIES.

THE total length of the railways of the United Kingdom at the end of 1905 was 22,847 miles, and the total track mileage 38,431 miles without sidings and 52,322 with sidings.

THE Manchester Building Industries Federation have adopted Mr. Thomas Park, general secretary of the Amalgamated Wood-cutting Machinists, as a trade-union candidate for St. Luke's Ward at the November election.

THE Kent County Council have decided to increase the salary of the county surveyor from 700*l.* a year to 1,000*l.* It was stated that in Middlesex the surveyor is paid 1,200*l.*

HIGHLY GLAZED FIRECLAY LAVATORY BASINS.

Fig. 945.—THE "DE SOTO."

London Offices & Showrooms: 2 & 3 NORFOLK STREET, STRAND, W.C.

in Hereford 1,250*l.* and 1,000*l.* in Surrey, Notts and Warwickshire.

THE Feltham District Council have decided to adhere to its present system of street lighting by oil in preference to gas, which the Sunbury Gas Company offered to supply at a price estimated to be about 25*l.* per annum more than oil now costs.

A SUB-COMMITTEE of the Portsmouth Corporation has been requested to carefully examine the phraseology of the fair wages clause which figures in the contracts entered into by the Town Council. The Board of Guardians have also decided to overhaul this particular clause in their standing orders.

LAST year 61,953,459½ gallons of water were used in the City of London for washing streets and courts. The engineer of the Corporation states that the quantity appears to be exceedingly heavy, and that steps are being taken to reduce the same without affecting the efficiency of the cleansing.

THE rival of the Eiffel Tower erected by Sir Edward Watkin in Wembley Park is being demolished. The material of the structure has been sold, a firm of Manchester contractors has the work of pulling down in hand, and the Metropolitan Railway Company has the sidings ready prepared for its removal.

THE first pile in the provision of new harbour works to be erected at Southwold at a cost of 45,000*l.* was driven on the 20th inst. The existing piers, which practically form the harbour, are to be extended 340 feet, and there is to be a uniform depth of water of 40 feet on the north side of the harbour. There will be a concrete quay 1,000 feet long.

THE Local Government Board held an inquiry at Droylsden into an application of the Council for sanction to borrow 9,000*l.* for sewage extension purposes nearly a year ago. Sanction has not yet been received. As the sewerage works are urgently needed, the Council are going to try and obtain an interview in London with the local board.

THE Flintshire education committee have decided that the county surveyor shall be paid the following percentage, viz. 1½ per cent. upon all expenditure in respect of buildings which had already been completed or which were now in process of erection, and 3 per cent. in respect of all buildings to be hereafter erected, the surveyor making his own arrangements as to the preparation of bills of quantities and the duplicating or printing of same.

THE river-wall at Fambridge, Essex, having collapsed in March, a body of unemployed were brought down from London to repair the breach under the direction of Mr. A. E. Carey, M.I.C.E. The work of over a hundred men during five months has now been destroyed. Two breaches in the main river wall, about a third of a mile apart—one 150 yards in length, the other 200 yards—have caused over 200 acres of land to be flooded at high tide to a depth of over 6 feet.

A SHORTAGE of wood in Litchfield County, Connecticut, has led to a new application of gas as an industrial aid. The lack of the usual fuel was threatening the restriction and possibly the entire abandonment of a once flourishing lime-burning business, when it was suggested that experiments should be made with gas as a substitute. As a result, the daily output of the kilns at Canaan and New Milford has been increased from 80 to 100 barrels a kiln. It is alleged that this is the first instance in any country of the use of gas in lime-burning.

A COMPANY has been formed under the title of the Manchester Tenants, Ltd., for an enterprise which has some features in common with the Garden City movement. Its purpose is to provide better housing accommodation for the clerks and artisans of Manchester. Every house is to have its own garden patch, and each is to be arranged with a due regard to the general appearance of the whole. The Society has been formed under the auspices of the Co-partnership Tenants' Housing Council. The scheme is one of collective ownership. Each tenant member takes five 10*l.* shares, paying up by instalments, and if he has to leave the neighbourhood the shares are transferable, unless he desires to keep them.

THE FARNHAM PROCESS.

THE Municipality of Paris offer prizes for the most artistic façades, and in consequence the city has been enriched by many excellent private buildings. We cannot expect the Corporation or the County Council to follow the example, but they might at least do something to promote the cleansing and reparation of the fronts of houses in the streets of London. In such a case the Farnham process would carry off many of the awards. The company have at present in hand the premises at the corner of Fenchurch Street and Billiter Street, which they are now treating under the direction of Mr. A. R. Stenning. The stone has suffered by the weather.

Farnham, Ltd., are removing by their patent process all the decayed surface of the stone, and the sound surface will then be treated by their patent waterproofing process, and impregnated to a considerable depth by pure paraffin wax, so that the pores of the stone will be entirely filled by an inert, colourless material which cannot be affected by acids or alkalis, and thus the stonework will in future be absolutely preserved from all possibility of decay.

An inspection of the work while in progress will be interesting to many architects and house-owners in London who have to solve similar problems. Building stone in London is subject to disintegration through atmospheric causes, and all such cases can be treated with absolute certainty of success by the Farnham patent processes.

CORROSION OF IRON AND STEEL.

A PAPER was read by Dr. Henry M. Howe, at the recent meeting of the American Society for Testing Materials, in which some of the popular opinions as to the relative resistance to corrosion of iron and steel were compared with scientific observations upon the same matter.

Since the general introduction of steel for iron in nearly all departments of construction it has been found that steel

is vastly superior in many respects, but there have been maintained certain views as to corrosion which, if true, become very important in some special cases. It is generally believed that wrought-iron does not corrode nearly so rapidly as steel, all other things being equal, and in locations where resistance to corrosion is essential, many engineers will use wrought-iron if it can be obtained. One of the objections to steel pipe is the general belief that it corrodes much more rapidly than wrought-iron, while experience seems to confirm the view that iron resists the corrosive action of gases, as in boiler stacks, overhead railroad bridges, &c., far better than steel.

Dr. Howe reviews these opinions in the light of accurate observations, and succeeds in disposing of some of the charges against the behaviour of steel, while others are suggested as suitable for further exhaustive scientific investigation.

On one hand we have the very general public opinion that steel corrodes not only faster but very much faster than wrought-iron, an opinion held so widely and so strongly that it cannot be ignored. Smoke does not prove that fire exists; but much strong smoke bids us look carefully for fire. On the other hand we have the results of direct experiments by a great many observers in different countries and under widely differing conditions; and these results certainly tend to show that this popular belief is completely wrong, and that on the whole there is no very great difference between the corrosion of steel and wrought-iron. Under certain sets of conditions steel seems to rust a little faster than wrought-iron, and under others wrought-iron seems to rust a little faster than steel. Thus taking the tests in unconfined sea water as a whole, wrought-iron does constantly a little better than steel; and its advantage seems to be still greater in the case of boiling sea water. In the few tests in alkaline water wrought-iron seems to have the advantage over steel, whereas in acidulated water steel seems to rust more slowly than wrought-iron.

Dr. Howe calls attention to the fact that with the general introduction of steel into structural work there has been also a great increase in sulphurous acid in the air of cities, while at the same time the presence of stray electric currents in the ground has introduced another cause of corrosion. Hence it is altogether possible that metallic struc-

tures may be more subject to corrosion than formerly, and yet this increased corrosion may be due to causes independent of the change in the materials themselves. It is admitted that popular beliefs, while lacking in scientific precision, are generally based upon a larger number of observations than are possible in the laboratory, and a greater variety of conditions of service, and hence they should not be hastily discredited, but given due weight in connection with scientific investigations.

In view of this great discrepancy between popular belief and the results of our direct tests, it behoves us who have relied chiefly on these latter to examine their conditions carefully, to see whether they really have represented fairly the conditions of actual industrial use and service in such a way that, if there is a real difference between the corrosion of steel and that of wrought-iron, such a difference would become manifest. In short, have our direct comparative tests been trustworthy?

Now, when we review our conditions in the light of this apparent contradiction between popular belief and the results of the differences between steel and wrought-iron which ought to cause a difference in their rapidity of rusting, there are three prominent differences:—(1) Blowholes; (2) manganese; and (3) the presence of cementite in the steel and of cinder in the wrought-iron. Let us take these up in order and see how they require that direct tests should be very prolonged or pushed to destruction.

1. Blowholes exist in steel but not in wrought-iron. But blowholes, at least blowholes which do not weld up and thus cease to exist, are not necessary. Yet they are to be prevented only by care and skill. Hence, get your steel only from careful and trustworthy makers.

2. Steel always and almost necessarily contains more manganese than wrought-iron. This may or may not hasten its rusting. If it does, then its effects ought to be made manifest even in short-time tests. From the fact that such tests do not show that steel rusts materially faster than wrought-iron, I infer that this manganese is probably not a serious cause of rusting.

3. Steel is generally richer than wrought-iron in cementite, the iron carbide Fe_3C . Wrought-iron always contains very much more cinder than steel. Each of these substances—the cementite of the steel and the cinder of the

wrought-iron—may have a double influence on corrosion, hastening it through difference of potential and retarding it by acting as a mechanical barrier like so much paint, to exclude the oxygen or the air or the water. It is not clear that the influence of difference of potential ought to change materially as corrosion proceeds; but it is clear that that mechanical protection given by the plates of cementite and of cinder ought to increase as corrosion proceeds. When a piece of wrought-iron, for instance, is first exposed to corrosion, only the outcrops, so to speak, of the sheets of cinder come to the surface; its mechanical protection is very small. But as corrosion proceeds and more and more of the metal which at first overlay the sheets of cinder is eaten away, the remaining cinder forms a larger and larger proportion of the outer surface, and therefore protects a constantly increasing proportion of the underlying metal from corrosion. In short, the mechanical proportion afforded by the cinder ought to increase as corrosion proceeds. Here, then, is a cause which, as corrosion proceeds, should continuously tend to retard the corrosion of wrought-iron, and to make it compare more and more favourably with steel. But, in like manner, as steel is gradually corroded away, more and more of its surface should come to be composed of cementite, and this fact should tend to retard the corrosion of steel, because cementite, too, should protect the underlying free iron or ferrite.

These causes may, in time, reverse the initial relative rapidity of rusting of steel and wrought-iron. Steel which in the first few months may rust faster than wrought-iron may, on greatly prolonging the experiments, or pushing them to destruction, actually rust more slowly, and *vice versa*.

Now of the two, the cinder of wrought-iron ought to gain more than the cementite of the steel, in its value as a mechanical retarder of corrosion, as time goes on and more and more of the metal is eaten away. The reason for this is that the cementite is in such extremely minute microscopic plate that the eating away of a very small quantity of the iron from above them ought to bring very nearly the full proportion of this cementite to the surface; whereas the much larger and more distantly scattered plates of cinder in wrought-iron would not constitute their full

share of the surface until a much thicker layer of initially overlying metal had been eaten away. This, then, may be the true explanation: that is, the reason why steel does not rust faster than wrought-iron in our direct tests, though it does in actual use, is that our direct tests are too short to

bring out the full protective action of the cinder of the wrought-iron. Or the reverse may be true. As time goes on, the harmful effect of the difference of potential of the cinder may grow more than its protective action. Let us, therefore, henceforth push our tests to destruction.

WORKING-CLASS DWELLINGS.

In the course of his report on the accounts of the London County Council Mr. T. B. Cockerton, the official auditor, refers to those relating to the erection of working-class dwellings. The Council, under their various improvements Acts, are restricted from acquiring houses occupied by persons belonging to the labouring classes until they have obtained the approval of the Secretary of State for the Home Department to a scheme for providing new dwellings for the number of persons residing in the houses proposed to be acquired. In the capital accounts of the dwellings built to satisfy these statutory obligations it has not been the practice of the Council in past years to charge the actual value of the land used for the building of such dwellings, but an amount which the valuer of the Council estimated the land would be worth if bought with the condition that it should be used for the erection of dwellings for the working classes, and this course has always appeared to the auditor as reasonable. During the year to March 31, 1905, the Council appear to have departed in certain cases from this practice, and in these cases to have charged to erection of dwellings account amounts which, in their estimation, will enable the Council to erect and carry on the buildings without a charge on the rates. In two of these cases, where the commercial value of the land was 4,500*l.*, and the value for the erection of working-class dwellings as recommended by the Council's valuer 2,250*l.*, nothing was charged for the land to the erection of dwellings account. In a third case a sum of about one-fourth the commercial value was so charged. The auditor points out that the difference between the amount charged to the erection of dwellings account and the actual value of the land becomes a charge on the improvements capital account, and that with regard to joint improvements, such as the Mare Street improvement, to which the Hackney Borough Council contribute one-fourth of the cost up to 125,000*l.*, the contributing authority is adversely affected. He states that he has passed the accounts relating to these matters as submitted to him, but he expresses the hope that the Council will give instructions for transfers representing full housing values to be made between the different accounts, as it would appear that the dwellings capital

accounts have been considerably undercharged. During the year sums amounting to 11,835*l.* were transferred from special county rate account to the appropriation accounts of dwellings built under Part III. of the Housing of the Working Classes Act, 1890, to make good the estimated deficiency. Although these accounts were relieved to that extent from rate account, there were still deficits at March 31, 1905, amounting to 1,664*l.* During the year the clerk of the peace received certain fees in respect of services rendered by him under the Licensing Act, 1904, and has not paid the amount with the other fees received by him to the county fund, but has kept the money in hand. The auditor states that there is apparently some doubt as to whether these fees are payable to the Council, and the matter is engaging the attention of the solicitor.

METROPOLITAN IMPROVEMENTS.

THE improvements committee of the London County Council, at the first meeting after the summer recess, will submit for approval a list of the county improvements for which they propose that statutory powers shall be sought in the session of 1907. The list this year is a very modest one, and the suggested improvements with one exception are for road widenings in connection with the construction of proposed new tramways, the most important of which are from St. John's Hill, Wandsworth, to Putney Bridge, from Norwood to the Crystal Palace, from Lea Bridge Road to Lower Clapton Road, from High Street, Stoke Newington, to Mare Street, Hackney, and in connection with the doubling and reconstruction of the lines taken over from the London Southern Company. In their report upon the subject the committee point out that the total net cost to the Council of the suggested improvements was estimated at 146,760*l.*, after deducting contributions from local authorities. If there was added to this an amount in respect of contributions towards the cost of local improvements, say, 100,000*l.*, the amount recommended for the year 1906-7 became 246,760*l.* That was less than the annual amount recommended in some of the previous years. If the Council adopted their present proposals the net amount voted for

street improvements during the eighteen years beginning March 1889 and ending March 1907 would be about 7,968,456*l.*, which represented an average annual vote of about 442,700*l.* The Metropolitan Board, during the thirty-three years of its existence, spent upon street improvements, including the embankment of the Thames, 11,516,974*l.*, an average annual expenditure of 349,000*l.* Since the Board was superseded by the Council the traffic in London had considerably increased, and the need for new and widened thoroughfares had become more and more pronounced. Having regard to this great public need, it became exceedingly difficult for them to refrain from submitting to the Council several important and necessary schemes, but in view of the large amount to which the Council was already committed in respect of street improvements, and having regard to opinions recently expressed in the Council against further extensive liability being incurred, they had decided this year to submit only a few of the most urgent schemes in connection with tramway proposals, special circumstances making it desirable for them to be undertaken without delay.

The Richmond (Ireland) District lunatic asylum authorities at their last meeting adopted a resolution requesting the architect to furnish an explanation as to why defective verandah work had been certified for at Portrane.

The Derbyshire Association of Urban District Councils' Surveyors has sent to the urban councils of the county a series of resolutions adopted by the Association, urging the taking of steps to improve the roads. In a letter to the authorities it is pointed out that the main roads throughout Derbyshire do not compare favourably with those of other counties in England, and contending that it is only by an increased annual allowance from the county authority that the main roads through urban districts can be maintained in a manner equal to present-day requirements. The Association requests any urban authority not satisfied with the allowance offered by the County Council to refuse to enter into a contract, and to combine with other authorities in a like position to urge the County Council to increase its allowances offered to an amount in keeping with the estimate of the urban authority's surveyor.

CARLISLE WATERWORKS.

The new waterworks for Carlisle were inaugurated last week. The supply is derived from two streams known respectively as Old Water and New Water, which below their junction become the river Gelt, drain an area of about 7,500 acres consisting entirely of open moorland, and have within their sheds several springs yielding a copious supply of pure water. Under their Water Act of 1898 the Corporation obtained power to appropriate and use for the purposes of water supply the Upper and Lower Tarnmonath Springs, Old Water Bridge Springs and Sheepwash Springs in the Old Water Valley, Leach's Springs in New Water Valley, Priest's Springs on the west slope of the Gelt below Geltsdale Farmhouse, and the waters of the two streams Old and New Water, with their tributaries.

The water of each spring in Geltsdale is led by pipes to the main receiving chamber situated at the junction of the waters. Weirs have been built across both Old and New Water above their junction, enabling the water of the stream to be diverted through copper wire gauze screens into pipes which deliver into the receiving chamber. The spring water is always clear and bright, but in times of flood the streams may become turbid. The receiving chamber is so arranged that the spring water and stream water are delivered into separate tanks, and the latter can be entirely shut off when discoloured by flood. The amount of water coming into the receiving chamber from either source is automatically gauged and recorded, and a copy of the record of the flow of the river Gelt over the gauge at Hynam bridge is electrically transmitted to the receiving chamber, so that the man in charge of the valves may know when to abstain from taking water. The highest spring is situated at an altitude of 1,290 feet above Ordnance datum, the top-water level of the receiving chamber being at 751.0 O.D.

A storage reservoir was necessary in order to maintain the full supply to the city in times of drought, and as there was no suitable site for such a reservoir in Geltsdale, it was decided to make use of the neighbouring valley of Castlecarrock, where a reservoir holding upwards of 170,000,000

gallons, and covering about 42 acres, is in course of construction. This reservoir, which will have its top-water level at 508.0 O.D., is to be formed by an embankment across the valley, 40 feet high in the deepest part, the waters of Castlecarrack beck being diverted round the eastern side. Seven filter beds, covering an area of 5,250 square yards, have been built below the embankment; two additional beds can be added when required.

The water from the receiving chamber at the junction of the waters is brought to Castlecarrack by a cast-iron main, 20 inches in diameter, three miles long, and can be delivered either into an open tank situated on the eastern slope about 90 feet above the filters, or into the filters direct. When the embankment is complete a pipe from this tank will deliver water into the southern end of the reservoir. For the purpose of providing a supply of water to the Brampton Rural District Council at a high level pumping has to be resorted to. Turbines driven by the flow of water from the upper tank down to the filters have been installed at the north-east corner of the filters. These turbines actuate centrifugal pumps which are capable of delivering the required quantity into the Brampton Council's reservoir at Garth Head, and a further quantity required for the supply of the farms round Castlecarrack and for the purpose of washing the sand for the filter beds. This latter water is delivered into a covered tank which adjoins the open tank at the end of the 20-inch gravitation main, and is at a sufficient elevation to command the houses and fields to be supplied.

After passing through the Castlecarrack filters the water is collected in a covered pure water tank, with top water level at 474.0 O.D., whence it flows through a 16-inch cast-iron gravitation main six miles long to the covered service reservoir at Cumwhinton, which holds 5,000,000 gallons, and can be doubled in size when necessity arises. As the top-water level at Cumwhinton reservoir is at 275.0 O.D., or 150 feet above the existing service reservoir at Harraby, the pressure in the city mains will be largely increased under the new scheme. From Cumwhinton a 21-inch cast-iron main four and a half miles long conveys the water into the city, and has been coupled up to the existing distributing mains at the junction of Warwick Road and Broad Street.

The scheme is designed to give an ultimate daily supply of three and a half million gallons, sufficient for a population of well over 100,000 persons.

The contract for the first portion of the scheme, including the intake works in Geltsdale, the gravitation mains, Castlecarrack filters and Cumwhinton reservoir, has been carried out by William Kennedy, Ltd., Partick; and the contract for Castlecarrack reservoir is in the hands of Messrs. Harold Arnold & Son, of Doncaster. Messrs. Gilbert Gilkes & Co., of Kendal, have supplied and erected the turbines and pumps at Castlecarrack; and Mr. G. Kent, of Holborn, has furnished the recording apparatus in Geltsdale and at Hynam bridge. Cottages for the men in charge at Geltsdale, Castlecarrack and Cumwhinton are being built by Mr. J. Heward, of Brampton, and Mr. W. Latimer, of Carlisle.

The resident engineer for all the works is Mr. A. W. Lewis, assisted by Mr. J. C. Boyd and Mr. P. H. East.

SMOKE.*

SMOKE is nearly always worst in the early stages of a fire, and although in the daytime it is often the best fire alarm possible, at night it is a serious danger to the sleeping inmates, and hampers the rescue work of the firemen. Being formed during combustion the gases within the floating vesicles and the other products are expanded by the heat which formed them, and are lighter than the surrounding air, and rise so that even in a room full of dense smoke breathing is possible close to the floor, whilst anything which will filter off the tar vesicles and dust leaves the air in a condition fit to breathe for a certain time.

The construction of a satisfactory smoke and dust respirator for use by firemen under conditions where the smoke is so thick as to seriously impede their labours is by no means an easy problem, and of the hundreds of such appliances that have been suggested and made very few even approach efficiency.

In making such an apparatus it must be remembered

that simplicity, lightness and compactness are essential. At the same time the filtering material must be sufficient to arrest the tar vesicles and particles of dust and carbon without offering so much impediment to the passage of air as to render breathing difficult, because the need for the helmet will probably arise under conditions of considerable exertion.

During the early stages of a conflagration when there is more smoke than fire, a good smoke respirator or filter of simple construction would afford much help, as the poisonous products of incomplete combustion are absent, but when a fire has been in progress for some time and there is a considerable mass of incandescent carbonaceous matter at the seat of the mischief, a large proportion of the product of incomplete combustion, carbon monoxide, begins to make its appearance with the smoke, steam and carbon dioxide. This introduces a new and serious source of danger to the workers, owing to the intensely poisonous nature of the gas.

The increase in quantity of this gas with increase in the mass of burning material is due to several factors:—

1. When the mass of incandescent matter is large the amount of air is rarely sufficient to complete the combustion, and carbon monoxide is produced.

2. With increase of temperature the proportion of monoxide to dioxide increases with great rapidity.

The playing of water on to the incandescent carbonaceous mass and the action of the steam generated on the glowing carbon yield carbon monoxide.

It might be imagined that as carbon monoxide ignites at about 700 degrees C. and burns readily in air, forming the comparatively harmless carbon dioxide, there would be but little chance of any escaping unburnt with the products of combustion, but dilution plays an important part in preventing the combustion of such gases, and air may contain from 16 to 18 per cent. of oxygen still left in, and yet extinguish the flame of carbon monoxide if there be any considerable percentage of carbon dioxide present in it.

It is generally stated that air which extinguishes a flame is irrespirable and will not support life, but it has been shown clearly that if the oxygen in the air be reduced to about 17 per cent. and the carbon dioxide increased to between 3 and 4 per cent., either by respiration or by combustion, although a candle placed in this air will be at once

extinguished, the mixture may be breathed by a healthy man for a very considerable period without any noticeable effect being produced.

Carbon dioxide is not a poison, but acts by keeping the oxygen of the air away from the lungs, and in small quantities by interfering with the diffusion processes which in the lungs enable the blood to discharge the carbon dioxide formed in the body, and to reoxygenate itself from the inhaled air. When 6 per cent. of carbon dioxide is present in the air men inhaling it begin to pant and show signs of distress, which becomes severe with 10 per cent., whilst 15 per cent. soon leads to unconsciousness.

With carbon monoxide, however, a distinct toxic action is set up with the presence of even small traces in the air inhaled. The gas forms a definite compound with the hæmoglobin of the blood, and so prevents it from carrying out its normal functions; 0.1 per cent. of carbon monoxide in the air will, after half an hour's breathing the atmosphere produce inability to walk, whilst 1 per cent. will produce unconsciousness in a couple of minutes, followed by death if the man "gassed" is not quickly removed to an uncontaminated atmosphere. Should a man be overcome, artificial respiration and the inhalation of pure oxygen is the only treatment to employ.

The history of attempts to produce apparatus providing a means of breathing smoke-laden air for any length of time affords the best idea of the difficulties that have to be overcome. Amongst these attempts some of the earliest were breathing-tubes, consisting of a muzzle fitting to the mouth with valves connected to which were long tubes, which remained in the open air and down one of which the wearer breathed, whilst fresh air was sucked in through the other. These were exceedingly awkward to manage, especially when corners had to be turned, and the skin friction of the air passing through the tubes rendered respiration extremely hard.

An improvement of this idea was to have an airbag with a short tube, which enabled a man to enter an atmosphere of smoke and remain in it for two or three minutes. A more complex apparatus was the smoke jacket, consisting of a blouse of cowhide fitted with a helmet over the head, the ordinary water hose being screwed into an inlet in the blouse, into which air instead of water was pumped by the

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW, and 6 Crosby Square, LONDON.

engine, whilst in the same clumsy class of apparatus Aldini's fire-protecting suit, consisting of asbestos covered by fine wire gauze and surmounted by a helmet, may be placed.

In 1875 Professor Tyndall, in conjunction with Captain Shaw, devised and introduced the smoke cap, which consisted of a hood of calf-skin, fitting practically air-tight over the head and shoulders, and which carried goggles for the eyes, and in front of the mouth a valve for expired air and a filter tube through which the air could be respired. The tube was closed with wire gauze at each end, and contained alternate layers of wool, wool moistened with glycerin, freshly burnt charcoal and freshly burnt lime, the whole apparatus weighing about 4 lbs.

In such a smoke-filter the wool moistened with glycerin is especially active in retarding the passage of such particles of dust and vesicles of tar vapour as could pass the dry cotton-wool, whilst the charcoal exercised a certain amount of absorptive effect on the gaseous products of combustion, the lime taking up the carbon dioxide.

In the smoke-helmets used at the present time no attempt is made to rely on filtration of air to render it fit for breathing, as it is recognised that to be of real service a helmet of this kind must render it possible for a man to enter any atmosphere, poisonous or otherwise, and the only way to do this is to keep him supplied with fresh pure air.

Perhaps the apparatus most used for this purpose is a survival of the old air tubes known as König's patent respirator. It consists of a helmet fitted with goggles, a valve for escaping air and inlet to which an air tube is attached; the neck of the helmet is made of soft leather which straps round the man's neck. The air tube, which may be of any length, is attached to the helmet, the other end being fixed to double-acting bellows worked by a man in the outer air, which drives fresh cool air round the face of the wearer, and the air being under slight pressure prevents the entrance of any gases or smoke to the helmet, the air finally escaping through a valve in the top of the helmet.

This form of smoke-helmet is popular with the men, as a small attachment near the bellows allows the tube to be used as a speaking tube, so that the man wearing the helmet can keep in communication with the man outside

and direct operations. Thus the feeling of isolation is done away with.

In case of a great disaster, such as a theatre or hotel fire, where the rescue of a large number of people has to be conducted rapidly, more independence of action than would be given by the König apparatus is needed, and for this purpose the Vajin-Bader helmet is excellently adapted.

It consists of a fire and gas-proof helmet, fitting tightly on to the shoulders and carrying mica eyepieces with revolving cleaners; a metal cylinder attached to the back flap of the helmet is filled with air under pressure, and this is allowed to escape slowly into the body of the helmet, the foul air leaking out through the shoulder-pieces.

Another excellent piece of apparatus of the same type is the Chapin-Sherman cap, which comes from San Francisco, and consists of a light oiled silk cap covered with fireproof material and connected with air reservoirs strapped on the fireman's back.

The supply of air carried is larger than with the Vajin-Bader apparatus, and the air cylinders, being lower down the back, form a ledge that would help in the carriage of an unconscious person on the fireman's back.

As we have seen, rapid combustion or fire is induced when the ignition point of a substance is reached, but in studying the causes of fire one soon discovers that they are by no means limited to those cases in which the combustion is caused by the direct application of flame or other source of heat, many secondary actions tending to bring a mass of material accidentally to its ignition point.

On taking the causes of fire as revealed by the statistics of any large town, one generally finds that matches in one way or another are a most prolific cause, whilst defective vents and flues or fireplaces, owing to the overheating of beams and woodwork near them, also mount up to a very large total, the other cases being due to a number of causes, amongst which the spontaneous ignition of goods in bulk plays an important part.

Taking the fire returns for 1904 in London, Liverpool, Manchester, Glasgow, Leeds and Sheffield, we find that the chief ascertained causes of fire were:—Matches, 1,695; overheating from defective flues and fireplaces, 853; gas, 464; oil, 408; candles, 327; whilst a myriad of other causes make up the remainder of the list.

POLISHED MARBLE WORK OF EVERY DESCRIPTION.

SUITABLE FOR PRESENTATION.

NOW READY,

PROUT'S

CONTINENTAL SKETCHES

Proofs on Thick Plate Paper in Handsome Portfolio, Cloth, Gilt Lettered, Size 21 inches by 15 inches, Price 42s. Net.

The work consists of 75 Plates, and was originally published at 30 Guineas. The Plates are the full size of Prout's Drawings, and are an exact reproduction by the

PERMANENT INK PHOTO PROCESS.

Mr. RUSKIN, Author of "*The Seven Lamps of Architecture*," &c., &c., referring to these Drawings, says:—

"Prout ransacked every corner of France, Germany, the Netherlands and Italy."

"Prout was, and he remains, the only one of our artists who entirely showed Turner's sense of magnitude; and of all forms of artistic susceptibility reverent perception of true magnitude is the rarest."

"Numerous as have been his imitators, extended as his influence, there has yet appeared nothing at all to equal him; there is no stone drawing, no vitality of architecture, like Prout's."

"His 'On the Grand Canal, Venice,' is an Arabian enchantment, his 'Street in Nuremberg' is a German fairy tale."

"Prout drew every lovely street in Europe."

"I have," says Mr. Ruskin, "both in my earlier books and in my lectures at Oxford, spoken of the sketches of Prout with reverence and enthusiasm."

"The sharpest photograph is not half so natural."

"No architect, however accurate in his measurements—no artist, however sensitive in his admiration—ever gave the proportion and grace of Gothic spires and towers with the loving fidelity that Prout did. This is much to say; and therefore I say it again deliberately, there are no existing true records of the real effect of Gothic towers and spires—except only Prout's."

THE PORTFOLIO INCLUDES THE FOLLOWING WELL-KNOWN PICTURES:—

Street in Nuremberg.
The Grand Canal and Church of St. Maria, Della Salute, Venice.
The Ducal Palace and Pillars of St. Mark, Venice.
Piazzetta San Marco, Venice.
The Interior of St. Mark's, Venice.
The Rialto, Venice.

COOLEY'S PATENT

DOUBLE DOWEL-PINS.

By this system each Block is securely fastened to its neighbour, and by means of the double-grip of each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.

For Wood-Paving purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of vibration.

Art Plates from "The Architect."

AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION
AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which
have appeared in "THE ARCHITECT" can now be obtained in a
separate form on proof paper suitable for framing.

The Corn Field.—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOUIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudouin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial*. "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage*. "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudouin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman*.

AND NUMEROUS OTHERS.
In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

Gaia.

From the Painting by RAPHAEL in the Villa Farnesina, Rome.
Size 30 in. by 22 in. Price Two Shillings. Free by post, carefully packed inside patent roller.

St. George.

From the Painting by RAPHAEL, in the Louvre.
Size 15 in. by 20 in. Price One Shilling and Sixpence. Free by post, carefully packed inside patent roller.

HALL'S Sanitary Washable DISTEMPER

The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,
SISSONS BROTHERS & CO., Ltd., HULL.

GOOD ADVICE.

Architects, Contractors, and others are recommended to journey by the

GREAT CENTRAL RAILWAY.

They will find it

RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

COMPETITION OPEN.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. TRADE NOTES.

THE Burgh Hospital, Peterhead, is being warmed and ventilated by means of Shorland's patent Manchester grates, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

THE London and Lancashire Fire Insurance Company announce that Mr. A. Percy Eccles, of the firm of Alexander Eccles & Co., has joined the head office board of the company in succession to his late father, Mr. Alexander Eccles, who had been a member of the board for sixteen years.

THE Safety Water Elevator Company some two years ago, under the management of Mr. W. Scott, started the manufacture of the safety water elevator, or Jonet's patent well gear, in High Street, Dunstable, but the rapid growth of their business necessitated larger premises, and early this year they acquired the Chiltern Engineering Works, with two acres of ground, situated just opposite the Great Northern Railway station. These works have now been fully equipped with machinery, and the company will be in a position to cope with the ever-increasing number of orders.

MR. CONSUL MACLEAN has reported on the trade of the consular district of Dar-al-Baida, comprising half Morocco, for the year 1905 and part of 1906. He states that public works will shortly be undertaken in all the coast towns, and adds:—"Changes are in the air; the Algieras conference has unlocked the door of Morocco to enterprise, and has made it clear that all public works are to be tendered for in the open market, and a State bank is to be established which will watch over the administration of finances. There is to be no favouritism. Private individuals are likely to build extensively in the near future, and everything appertaining to the building trades may find a market, but the orders are not likely to go to the United Kingdom unless the trades concerned combine to send out shrewd and tactful experts to take stock of local requirements and conditions and to make acquaintance with the men on the spot who could assist them to obtain business. Catalogues alone will not attract orders."

ELECTRIC NOTES.

SIR A. B. W. KENNEDY has been engaged to investigate and report upon the Woolwich Borough Council's electricity undertaking.

AN American Consular report from Reichenberg gives particulars of a discovery of a complete substitute for celluloid, which is not yet patented nor on the market. It is stated that the new invention overcomes all shortcomings, although retaining all the desirable qualities of celluloid. The substitute is but little dearer than glass, which is much cheaper than celluloid and of about the same weight. The material is a non-conductor of electricity and can be used for insulation.

MR. DALRYMPLE, general manager of Glasgow Corporation tramways, has prepared a report for his committee in view of the drafting of a provisional order for further extension of the city's tramway system. In this report he suggests, amongst other things, the opening of a new tramway route from Eglinton Toll, on the south of the river Clyde, over the Clyde into Dixon Street and St. Enoch Square. This would necessitate the erection of a steel bridge across the river, connecting South Portland Street and Dixon Street. The congestion of traffic on Jamaica Street is, he says, growing annually greater, the number of cars crossing each way at present being at the rate of one every eighteen seconds. The extensions suggested in the report for different parts of the system would make a total of $4\frac{1}{2}$ miles of double track.

ACCORDING to the annual report of the manager of the Bradford Corporation tramways, the undertaking in that city suffers seriously on account of the gradients. Two heavy items of expenditure are directly attributable to this fact, namely, power and car repairs. In a level city the consumption of power per car mile is, roughly, one unit, as against 1.9 units in Bradford. This would mean a difference of nearly 20,000*l.* Car repairs in a level city were generally about 0.5*d.* per car mile, as against 0.8*d.* in Bradford, a difference of 0.3*d.* per car mile, amounting roughly to 6,300*l.*, so that to the gradients an extra expenditure of 26,000*l.* was directly attributable. The net profits were 11,637*l.* and over 9,000*l.* was paid by the department as rates.

VOLUME LXXV. OF THE ARCHITECT.

Handsomely bound in Cloth. Gilt Lettered, price 12s. 6*d.*
Imperial Buildings, Ludgate Circus, E.C.

A SCHEME is under consideration for utilising the water power of Loch Awe and the river Awe for commercial uses. It involves the construction of an embankment or dam 11 feet high, at a point about midway between where the river Awe debouches and the bridge which carries the public road over the river, so as to raise the dam to the normal level of the loch. The effect will be to prolong the narrow tongue of water in the Pass of Brander to the site of the embankment. From the embankment an open canal will conduct the water for two miles and discharge it through steel pipes to the power-house stationed at Bonawe. The electric energy generated at the power-station will be transmitted by overhead cables to works which it is proposed to construct at Achnacree more, an extensive peat moss near the North Connel station of the new branch of railway to Ballachulish. At these works the promoters contemplate the manufacture of steel by means of electric furnaces.

VARIETIES.

MR. JOHN HANCOCK, aged eighty-four, of Clifton Hill, Exeter, brick and tile manufacturer, bequeathed various sums to charities. His estate has been proved at 120,524*l.*, net personalty being 93,630*l.*

THE baths committee of the Camberwell Borough Council have decided to arrange the principal bath at Church Street during the winter for cricket practice. Three good pitches will be made.

THE United States Government will build at Manila two steel wharves with concrete piers. One of the wharves will be 650 feet long and 110 feet wide, and the other 600 feet long and 70 feet wide.

At the next regular quarterly meeting of the Association of American Portland Cement Manufacturers, to be held at Chicago, Ill., on September 11 and 12, Mr. R. L. Humphrey will give a talk, accompanied by stereopticon views, on "The Behaviour of Structural Materials under Earthquake Shock and Fire at San Francisco."

THE Midland centre of the Sanitary Inspectors' Association held their annual meeting at Lichfield on Saturday.

The officers elected for the ensuing year are as follows:— Messrs. W. Wilkinson (Derby) chairman, J. T. Cowderoy (Kidderminster) vice-chairman, A. Kent, hon. secretary.

THE Stockport Town Council has decided to proceed with the construction of an earthen dam in connection with the Kinder reservoir. About a year ago the Council gave up the attempt to reach suitable foundations for a masonry dam after expending over 70,000*l.* to no purpose. New contracts will be invited.

THE Heywood and Middleton Water Board have decided to promote a Bill in the next session of Parliament giving them powers to borrow 125,000*l.* for the purposes of the waterworks undertaking, and for the extension of time for the completion of works authorised by the Act of 1901. The Board have already expended over 160,000*l.* in connection with a scheme comprising the construction of a reservoir on Ashworth Moor.

THE Brechin district committee have agreed to build a bridge at Justinhaugh at a cost of 4,000*l.*, build a bridge at Powmill at a cost of 500*l.*, and alter a bridge between Brechin and Edzell at a cost of 1,500*l.* For new bridges and alterations in the district the sum of 10,000*l.* will be expended. Mr. A. Goodwillie, road surveyor, Alford, son of Mr. Goodwillie, surveyor, St. Andrews district of the Fifeshire County Council, was appointed surveyor for the Brechin district.

THE United States Bureau of Labour has issued a bulletin in which the rates of wages paid in America, Great Britain and Germany from 1890 to 1903 are compared. The figures cover thirteen of the most important branches of labour, and show that the British employer pays nearly 50 per cent. more for his labour than does the German, while the difference as against the American employer is 191 per cent. At the same time it is shown that the German worker is increasing his rate of wages toward the British standard.

THE designs of the new technical school for Burnley have received the approval of the Board of Education. The site in Ormerod Road was purchased for 5,000*l.*, and the cost of the entire institution is expected to be 65,000*l.* The accommodation provides for 736 day scholars, with additional provision in the chemical and physical laboratories,

art-rooms, workshops, &c.; and 1,351 scholars can be accommodated at one time in theoretical and practical science, art and technology. The designs for the new school were prepared by Mr. G. H. Pickles, the borough surveyor.

THE Liverpool Corporation estate committee have agreed to recommend the City Council to sell to the Royal Liver Friendly Society, for 70,000*l.*, about 6,000 square yards of land on the site of the Old George's Dock for the erection of new offices. This is one of the best positions in the business part of the city, being close to the landing-stage and to the new office of the Mersey Dock Board. It is stated that the Royal Liver Society's new building is to cost nearly a quarter of a million sterling. Part of the building, it is believed, will be occupied by one of the large shipping companies.

As a result of protests by Blackburn ratepayers against any portion of the valuable Blakey Moor property being used as a site for fire brigade headquarters and drill yard, the architects for the scheme have prepared two alternative plans for adapting the existing headquarters in Clayton Street. One is estimated to cost 36,781*l.* and the other 42,574*l.*, but the architects point out that neither provides for the required minimum of firemen's dwellings and drill-yard space, as laid down in the original Blakey Moor scheme. The fire station forms only a small part of a comprehensive scheme which includes the erection of police headquarters and courts, grand jury room, magistrates' offices, &c.

FISHGUARD HARBOUR, which was formally opened for traffic on Thursday, is situated in South Cardigan Bay, on the Pembrokeshire coast. There is a sufficient depth of water to accommodate vessels of the largest draught at all states of the tide, and excellent anchorage on a soft, rockless bed is afforded. The quay space at present available is 1,120 feet in length, which is sufficient to enable three vessels of large tonnage to be berthed simultaneously, and a surplus of 1,000 feet will be utilised for extensions when these are necessary. Nine electric cranes, each able to handle loads of 30 cwt., are available for dealing with mails and cargo direct from the steamer to the quay or train, or *vice versa*. In addition there is a 21-ton stationary

electric crane, capable of lifting a laden coal waggon in a cradle and tipping the coal direct into steamer or lighter.

At the meeting on Tuesday of the Liverpool water committee Alderman W. J. Burgess, the chairman, remarked that a very alarming report had appeared in the newspapers that a burst had taken place between Oswestry and Malpas. It was said to be a burst of the main pipe 42 inches in diameter, but as a matter of fact the burst was of quite a subsidiary character, being only 12 inches in diameter. Although the occurrence was unfortunate, it was not nearly so serious as the public might be led to imagine from the somewhat vivid description which had appeared in the newspapers. Little or no damage had been done, and he was glad to say the pipe had been sufficiently repaired.

THE directors of the Busby Water Company have informed the Glasgow Corporation that they are prepared, subject to the consent of Parliament being obtained by the Corporation, to advise a sale of the company's undertaking to the Corporation at the price of 30,413*l.* 17*s.* 2*d.*, subject to adjustment when the actual amount of the further expenditure has been ascertained. The company will pay off all loans and debts due by them, and retain and uplift all sums in their hands or due to them. The company's stores will be taken over at a valuation in addition to the price. Two committees, being unanimously of opinion that it would be in the public interest that the Corporation should acquire the sole right to supply water in the area at present supplied by the company, have recommended the Corporation to accept the offer.

SIR WILLIAM WARD, in a memorandum on German ceramic industries and German trade in ceramic products, has informed the Foreign Office that the extent of German industry and trade in the various descriptions of ceramic ware, including bricks, &c., has largely increased during the past thirty years, and it appears likely to develop further during the near future. One or the other branch of ceramic industry is now to be met with in almost every part of Germany. Common clays which can be utilised for brick-making, and also those which can be used for the manufacture of common earthenware goods, are of frequent occurrence. The rather superior kinds, and among them those kinds which turn white after burning, are likewise not unfrequent.

THE Egham (Surrey) surveyor reported to the Council that the tar surface of the main road, which had been placed for a certain distance, was breaking up. He had written to the county surveyor asking him to express an opinion on consolidating macadam by rolling only, as against using a grouting material while the rolling was in progress. The county surveyor had replied that, although he had often tried to roll the granite dry, he had never succeeded in consolidating a single yard without some binding material. He believed that if it was ever done at all it was only after the roller had crushed the granite sufficiently to produce some fine material to fill up the interstices. He was absolutely certain that if large experiments were made in trying to roll granite dry on such roads as those through Egham, which are used by thousands of motorists, the motorists and drivers of other vehicles using the road would soon be begging the Council to go back to the old method.

At Lambeth Mr. John Troutbeck held an inquest touching the death of William Robins, forty-six. According to the evidence it appeared that on January 8 deceased was erecting scaffolding on some flats which were being erected in Chester Street, Lambeth. The deceased was in the act of tightening the rope around the scaffold when it broke, and he fell out over the scaffold into the road, a distance of 28 feet. The jury returned a verdict of "Accidental death," and added a rider that "the ropes should be overlooked before leaving the works for the job." The

coroner said the question of the dangers of scaffolders was being very carefully considered by Government authorities in order to see whether rules could not be drawn up whereby the dangers would be materially lessened. Cases such as the one the jury had heard that day were valuable in showing precisely what the dangers were and how they could be guarded against.

MR. C. F. WIKER, the Sheffield city surveyor, in his annual report states that the number of houses erected and certified for occupation was 1,982, being 19 houses more than the number in 1904; other buildings to the number of 420 were satisfactorily completed, an increase of 49. No fewer than 46,990 houses have been erected under the by-laws since 1864; there are now 16,600 back-to-back houses, and a total number of 100,700 houses in the city, of which from 3,500 to 4,000 are unoccupied. Consideration of the details of the great sewage scheme, estimated to cost 270,000*l.*, for remodelling and extending the present works, has occupied close attention. The Local Government Board now being prepared to allow the Corporation to proceed at once with work to the value of 100,000*l.*, a commencement is being made. The section of the work includes an alteration of the catch-pits and inlet channels, the construction of settling tanks and contact beds of sufficient capacity to treat from 10,000,000 to 12,000,000 gallons per day. The volume so to be provided for is practically equal to the present dry-weather flow. On the completion of this section of the work a considerable improvement in the purity of the effluents may be anticipated, as well as an increase in the volume of storm water treated.

THE medical officer to the Berks County Council in his annual report says:—The importance of a pure and plentiful water supply cannot easily be overrated. It is true that communities may for many years be dependent on a polluted supply, such as is drawn from shallow wells in a soil impregnated with sewage, and yet no outbreak of illness directly traceable to it occur, but not a year passes without affording an object-lesson on the possibility of waterborne disease being introduced. It is against common sense to use the same land for refuse disposal and water supply, but this is what is unintentionally being done in some villages. The area of land around individual houses

THE LEEDS FIRECLAY COMPANY LTD

Head Office WORTLEY LEEDS

LONDON OFFICE 2 & 3 NORFOLK STREET STRAND.W.C.

is usually so small that any leakage from privy middens, leaking cesspools and refuse heaps must find its way, in a very imperfectly filtered condition, into the wells. These facts are fortunately becoming more generally recognised, and in the sinking of new wells proper construction and selection of site with regard to sources of pollution are receiving better attention. Every urban district in the county now has a public water supply available, and the number of unsatisfactory wells in use is steadily diminishing.

SCAFFOLD ACCIDENTS.

At the London City Coroner's Court Mr. Francis Thomas held an inquest recently on the body of Nathaniel Dickerson (55), a stonemason's labourer. Deceased was working on the top of the new Bartholomew's Hospital buildings which are being erected in Giltspur Street. About seven o'clock he was sent below for more cement, and had started to come down when he missed his footing and fell nearly 50 feet. He was taken to St. Bartholomew's Hospital, where he died two hours after admission from shock following fracture of the skull and other serious injuries. The general foreman said the ladder down which the deceased was coming had been tied to a horizontal "ledger," which had been depressed by the weight of material on it. As the material was taken away the "ledger" lost its depression, and getting back to its normal position caused the ladder to swing clear of the scaffolding so that the moment deceased got on it it swung and threw him off. Replying to the coroner, the foreman stated that he had never heard of such an accident before. The jury returned a verdict of "Accidental death," and expressed the opinion that more care should be taken in such cases in the future. Several witnesses engaged in the building trade said they had never heard of such an accident before.

A CAREFUL investigation has shown that the reconstruction of San Francisco will involve an expenditure of about 80,000,000*l.*, of which skilled and unskilled labour will reap a reward of 38,000,000*l.* These figures are based upon the cost of building material and the rate of wages current.

A NEW STEEL PROCESS.

PARTICULARS of a new steel process are given in a report by Mr. D. H. Ross, Canadian commercial agent at Melbourne. The results achieved are said to be so successful that the process is to be exploited throughout the world. It is called the Heskett-Moore process for directly converting iron ore into malleable iron or steel by a continuous system, and, it is claimed, effects a saving of 25 per cent. in the manufacture. The ore is simply concentrated by ordinary methods, or if it is magnetic it is separated electrically until the pure oxide of iron is obtained. The oxide of iron is passed through a revolving cylinder heated by waste gases from subsequent operations and brought in that cylinder to a dull red heat. It drops from the cylinder to a second similar cylinder, and in the latter it is brought into contact with the deoxidising gas, which is forced through and brought into contact with the heated ore. The heated ore is thus converted into a pure iron. Accompanied by and protected by the deoxidising gas, it is passed into a third chamber or melting hearth, where it falls into a bath of molten iron and is converted directly into steel or balled up as malleable iron. The savings claimed for the process are those of time, labour—the whole process being automatic—fuel and avoidance of flux. The inventors claim that they have discovered a direct method of producing steel from one operation instead of using the blast furnace and converter.

CONCRETE LINTELS.

THE desire to employ reinforced concrete is unprecedented. The use of wrought and rolled-iron girders was not attended with so much eagerness sixty years ago. It is not to be supposed that the new mode of building is only adapted to be employed on a grand scale. Cases arise in everyday work where a beam or lintel of reinforced concrete would be advantageous. Messrs. Joseph Sankey & Sons, Ltd., have anticipated that demand by preparing skeleton steel in 3 feet, 4 feet, 5 feet, 6 feet, 7 feet and 8 feet lengths, and which can be obtained through any builders' merchant. The depth corresponds with two or three courses of brickwork, as the case may be.

BIRMINGHAM SCHOOL OF ART.

THE session at the Central school of the Birmingham Municipal School of Art will begin on Monday, September 10. During the previous week the school will be open to public inspection from eleven A.M. to nine P.M. daily, and the head master (Mr. R. Catterton-Smith) will attend on four days in order, as far as possible, to arrange the courses of study of intending students. Classes will be held there throughout the session on five mornings, six afternoons and five evenings a week. The courses of study cover elementary and advanced drawing, painting and modelling, including work from plants, living animals and birds, the antique, groups of still life, life, and an outdoor painting class; and highly-skilled experts will teach the following processes:—Bookbinding, embroidery and other needlework, metalwork and enamelling, including carving, chasing, chipping, damascening, engraving, mounting, raising, repoussé, setting, &c.; ironwork, book illustration, pictorial design, &c.; stained-glass work and figure design applied to decoration; surface design, gesso, leatherwork, &c.; wood-carving, writing, illumination and heraldic drawing, house-painting and decoration.

Mr. W. H. Bidlake, M.A., will begin the session with lectures upon the development of Gothic architecture in France, Germany, Spain and Italy, and will conclude with references to recent architecture. Mr. H. T. Buckland and Mr. Edwin F. Reynolds have prepared new syllabuses respectively in the advanced and elementary stages of architectural design. Mr. Francis B. Andrews, assisted by Mr. Ralph Berrill, remains in charge of the classes in building construction, and Mr. Alfred W. Baylis retains the teachership of taking builders' quantities.

NEW MANCHESTER INFIRMARY.

A MEETING of the Manchester Royal Infirmary Board was held on Tuesday. Messrs. Hall & Brooke, the architects, reported on the progress of the works of the new Infirmary. They stated that the steelwork of the first floors was fixed over the large wards of six pavilions, and the other pavilions were being pushed on with rapidity, the walls being from 4 to 10 feet high above the ground level. The surgical theatres were also about 4 feet above the ground

floor. There was a large quantity of material on the site, amounting in value to many thousands of pounds. There were more than 460 men at present at work on the site, and this number would be augmented as rapidly as possible. It appears that there had been correspondence with the waterworks committee of the Corporation as to an assured supply of water to the institution when water was cut off from private houses in cases of drought. The architects now expressed their satisfaction that there would be no conceivable risk of the Infirmary being deprived of water at any time.

A WORKING SCULPTOR.

A CORRESPONDENT of the *Glasgow Weekly News* gives the following account of an interview with Mr. Pittendrigh Macgillivray, R.S.A., of Edinburgh:—

When I called on Mr. Macgillivray at his studio at Ravelstone Elms the other morning I found him busy with a very important commission which he has now in hand, and which, when completed, will be the sculptor's masterpiece. I refer to the national monument to the memory of the Right Hon. W. E. Gladstone, which is to be erected in St. Andrew's Square, Edinburgh. On a pedestal 18 feet high will stand the figure of Mr. Gladstone in Court dress as a member of the Privy Council, and robed in the gown of the Chancellor of the Exchequer. In his portrayal of the great statesman the artist has set himself to express the strong mental calibre of the subject, while as accessories there are to be a series of symbolic figures. On the pedestal will stand representations of "Faith," "Fortitude," "Vitality" and "Measure" (the classic term for harmony in arrangement). On the base, on a scale larger than life, figures symbolic of "Eloquence" and "History" will find a place, while on a prow-shaped peak in front stand two Greek youths holding aloft a large laurel wreath, with depending bands, on which are inscribed Homeric quotations.

As I glanced over the sketch models of this creation I could not help feeling that the idea was indeed worthy of the great memory it was to honour, and Mr. Macgillivray's achievements in the past leave no doubt that its execution will be equally worthy the occasion.

CABOT'S INSULATING - AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

ARTHUR L. GIBSON & COMPANY,

19, 20 & 21 TOWER STREET, UPPER SAINT MARTIN'S LANE, LONDON, W.C.

"Do you prefer to work in bronze?" I asked, as I noticed that much of his best work had been completed in that material.

"No, I have no preference. The bulk of my work has been in bronze, because it has been work of a public nature."

"You studied abroad, of course?"

"I did not," replied the artist with emphasis. "I have been abroad, but not as an art student in the sense you imply. I acquired the technical part in the studio of a man who, like myself, had little or no scholastic training—Mr. William Brodie, R.S.A. I have spent most of my time in Edinburgh and Glasgow. To Mr. Brodie's studio in Edinburgh I went when only about fourteen years of age to serve an apprenticeship to the technical side of sculpture. I was also with Mr. James Steel, who was a clever ornamentist in Glasgow. Later I was with Mr. John Mossman, R.S.A."

"It was Mr. Mossman who had the commissions for the statues of Livingstone and Thomas Campbell in St. George's Square, in Glasgow?"

"Yes. I was Mossman's assistant at that time, and was engaged on those statues. It was as a craftsman I worked in the studios of those men. All the art training I received was from books, and the works of men in these and other cities I have visited at home and abroad—sources open to anybody."

"But don't you think, Mr. Macgillivray, that we don't do enough in the way of art teaching in this country?"

"One hears a great deal of talk, as if much could be done to instil a knowledge of art into pupils. Some talk about the time they were in such and such a famous artist's studio, and received from him the spirit, as if it were something of the nature of the laying on of hands. Personally, I don't believe in that sort of thing. My opinion is that unless a man has got that in him which will stamp him as an artist in the true sense of the word he cannot be educated to it. You can train him to use his hands and eyes, but that is all."

"For instance, you come across a young fellow who is interested in art, and would like to know something about it, but that may be really the sum total of his capabilities. He takes a course of lessons from an art teacher, and gets the length of painting pretty subjects. Somebody comes

along, admires them and advises him to take a studio. But all the while he has been painting a variety of things for which there seems to be no use, for which there is no market, and the opening of the studio does not create that demand."

"Education will not solve that problem. What, then, is the remedy you would suggest?" I asked.

"That the student study his art in relation to a craft on a practical basis. For instance, when the painter sets out on his artistic career we would teach him the use of his tools and the materials with which he is to work—teach him everything about the paint he is to handle, and how to use it in a practical way. In fact, first make him a craftsman, then follow that up with instruction in the higher branches. In that way, if he were not a success as an artist he would still be able to earn his living."

"That was your own experience?"

"It was. I began by cutting marble and preparing clay."

"But it would require a tremendous revolution in art circles to bring that about?"

"Perhaps; but remember it is scarcely more than what has been going on in Paris and elsewhere in connection with some of the schools. A great many people have the idea that to succeed in art one has to go abroad and study under great masters. I hold that more is done by training a man to be a workman, and if he has the talent it will show itself once he knows his tools."

STAINING MARBLE.

THE art of staining or colouring marble was at one time a very lucrative secret, though there was scarcely anything in the process that has not, at one time or other, been made known. Kincher was one of the first who published practicable information about it. This author, meeting with stones in some cabinets presumed to be natural, but having figures too nice and particular to be supposed of nature's making, and these not only on the surface, but sunk through the whole body of the stones, was at the pains of finding out the artist who did the business; and on

his refusing to part with the secret on any terms, Kincher, with Albert Gunter, a Saxon, endeavoured to find it out, in which they succeeded at length. Their method was the following:—Take aqua fortis and aqua regia, of each two ounces, sal armoniac one ounce, spirit of wine two drams, about twenty-six grains of gold and two drams of pure silver; let the silver be calcined and put into a vial, and pour upon it the aqua fortis; let this stand for some time, then evaporate it, and the remainder will first appear of a blue and afterwards of a black colour. Put the gold into another vial, pour the aqua regia upon it, and when it is dissolved evaporate it as the former. Put the spirit of wine upon the sal armoniac, and let it be evaporated in the same manner. All the remainders, and many others made in the same manner from other metals, dissolved in their proper acid menstria, were kept separate and used with a pencil on the marble. These will penetrate without the least assistance of heat, and the figures being traced with a pencil on the marble the several parts are to be touched over with the proper colours, and this renewed daily till the colours have penetrated to the desired depth into the stone. After this the mass may be cut into thin plates, and every one of them will have the figure exactly represented on both surfaces, the colours never spreading. The nicest method of applying these or the other tinging substances to marble that is to be wrought into any ornamental works, and where the back is not exposed to view, is to apply the colours behind and renew them so often till the figure is sufficiently seen through the surface on the front, though it does not quite extend to it. This is the method that, of all others, brings the stone to a nearer resemblance of natural veins of this kind.

INDUSTRIAL OCCUPATIONS.

A CORRESPONDENT of the *Times* gives some remarkable figures bearing upon industrial occupations. During the last twenty years the persons engaged in productive work have increased by 19 per cent., while the occupied persons merely rendering services to others have increased at the rate of 41.2 per cent. The population engaged in agriculture has diminished 11.4 per cent., and that engaged in textiles has been stationary. It has only increased 0.7 per cent., and has fallen from the third to the seventh place among the occupational groups. Mining shows an increase of 52.3 per cent., due to the increased export of coal. Metals, machines, &c., show an increase of 49.8 per cent.; building, an increase of 47.5 per cent., much of it due to municipal activity in effecting improvements; the brick, pottery and glass industry shows an increase of 36.9 per cent.; and paper, &c., no less than 76.3 per cent. On the other hand, in the unproductive occupations every group, except domestic service, shows a large and in many cases an enormous increase. Thus Government (general and local), 60.2 per cent.; defence, 57.1 per cent.; professions, 45.3 per cent.; commercial, 40.3 per cent.; conveyance, 59.7 per cent.; gas, water and sanitary service, 170.8 per cent.; drapers and some other dealers, 73.0 per cent.; clerks have increased 100 per cent.; railway men, 98.6 per cent.; carmen and carriers, 117.7 per cent.; dockers, 134.8 per cent. Trade and export have replaced productive industry, particularly transport, which has risen from the sixth to the second place among occupational groups. The writer whose figures we are quoting concludes that "the root cause of this change in the occupations of the people, with its consequences, is the system of free imports, which fosters

trade and transport, combined with restricted foreign markets, which discourage productive industry." However that may be, his figures, which are not open to controversy, invite serious consideration.

PRESERVATION OF SQUARES.

THE Act 6 Edward VII., Session 1906, provides that the freeholders, or persons otherwise interested in the sixty-nine squares or enclosures in the administrative County of London, having consented to its provisions, it shall not be lawful to erect any building or structure upon any part of the scheduled lands, save such buildings as are necessary or convenient for the use of such lands as gardens, or for the purposes of recreation. In certain cases the persons now interested cannot bind their successors, who are therefore specifically protected in the Act by a provision which is probably more a legal expedient than a prospective difficulty. The maintenance of "scheduled lands" now managed by the Commissioners of Woods shall be undertaken by the London County Council if it is required to do so, and as to the open spaces generally the operations of the Act may cease if the owner for the time being of an estate of which any of the scheduled lands form part shall set apart other lands which the County Council regard as an equivalent area.

The value of this effort of the London County Council to perpetuate these areas as air-spaces can only be gathered from a list of the "scheduled places" giving the name of the square or enclosure or the locality of the lands. It is as follows:—

City of Westminster.—Bessborough Gardens (triangular garden enclosure), Montpelier Square (garden enclosure).

Camberwell.—Leyton Square and Camberwell Green (garden enclosures), One Tree Hill, Summer Road, Varcoe Road, Grove Lane (recreation grounds), South Grove, Rye Lane and Cox Walk, Forest Hill (enclosures).

Deptford.—Wickham Gardens (garden enclosure).

Finsbury.—King Square, Bartholomew Square, Finsbury Square, Northampton Square (garden enclosures), the Triangle of St. John (triangular enclosure), Wilmington Square (public garden enclosure and fountain).

Greenwich.—Westcombe Hill (enclosed lands).

Hackney.—St. Thomas's Square (enclosed garden), Shacklewell Lane (green and triangle), Stonebridge Common (garden enclosure), Kenton Road Triangle, (enclosed land).

Hampstead.—Stanley Gardens, Chalcot gardens (garden enclosures).

Islington.—Alwyne Square, Canonbury Square, Penn Road, Caledonian Road Triangle, Edward's Square (garden enclosures), Thornhill Crescent (enclosure), Thornhill Gardens, Thornhill Square (garden enclosures), Islington Green (triangular garden enclosure), Newington Green, Kingsdown Road (garden enclosures), Market Road (playground and garden), Highbury Park (enclosed land).

Kensington.—Hereford Square, Emperor's Gate (garden enclosures), St. Quintin's Avenue (triangular enclosure).

Lambeth.—Melbourne Square, Clayland's Road Triangle (garden enclosures).

Lewisham.—Addington Grove, Adelaide Road, Dermody Road Triangle (garden enclosures), Queen's Road Circle (garden), Stanton Square (enclosure), Stanstead Road Triangle (garden enclosure), High Street, east side (enclosure), High Street, east side (three garden enclosures), High Street, strips, west side (nineteen garden enclosures), Rushey Green (five garden enclosures).

The New American City.

BRACKETS, and WIREWAYS:

Extensive ranges of COLUMN PATTERNS, SPANDRILS, FRIEZES, &c., as catalogued, for CONSTRUCTIONAL WORK, BALCONIES, STAIRCASES, &c., all ready for instant operation on receipt of detailed plans and specifications. Enquiries will have immediate attention.

St. Pancras.—Camden Gardens (garden enclosure), Munster Square (two garden enclosures), Clarence Gardens (two garden enclosures), Pond Square (three enclosures of land), College Gardens, Lismore Circus (garden enclosures).

Shoreditch.—Charles Square, Hoxton Square (garden enclosures), Windsor Terrace (enclosure), Goldsmith Square (recreation ground).

Southwark.—Redcross Gardens (garden enclosure), Portland Terrace (enclosed land).

Stepney.—Trafalgar Square (garden enclosure).

Wandsworth.—West Hill Road (triangular garden enclosure), West Hill Road (triangular enclosed space), Melrose Road Triangle (garden enclosure), Paget Terrace (three garden enclosures).

THE EMBANKMENT TRAMWAYS.

THE London County Council are making the necessary arrangements for the construction of the tramways over Westminster Bridge and along the Victoria Embankment. They have entrusted to their works committee the work of constructing the subway from the Strand to the Embankment which is intended to carry the trams and form, when connected with the existing tramway subway, a through route between the north and south of the Thames. When this is completed the subway will extend from the Embankment to Southampton Row. It is also proposed to construct a subway station for the trams near the Strand beneath Wellington Street. The work, which is estimated to cost about 65,000*l.*, will be begun as soon as the necessary property has been acquired, and every effort is being made to expedite this matter. Contracts are also being let for constructing the lines over Westminster Bridge and along the Embankment as far as John Carpenter Street, with connection with the proposed subway at Waterloo Bridge. The cost of the trackwork on these lines is estimated at 96,000*l.* Ultimately the lines will be extended to the south side of Blackfriars Bridge, but this will not be possible until, according to the arrangement arrived at when the subject was before the Parliamentary committee, that bridge has been widened by the City Corporation. Pending the com-

pletion of the circular services it is not anticipated that any extra rolling stock will be required, and the power for driving the tramcars will be secured from the Council's own generating station at Greenwich. Arrangements are being made for the erection of a permanent sub-station in the Gray's Inn Road. The lines across the bridge and along the Embankment will, in accordance with a suggestion made by the select committee of the House of Commons, be laid on one side of the road near the kerb, on the downstream side of the bridge and the river side of the Embankment. Certain necessary alterations will be made at the present Westminster Bridge Road terminus, and connections with the Battersea and Wandsworth tramways are included in the proposals. It is anticipated that the tramways will be finished and ready to be worked by the end of the present year or early in 1907.

STONE IN AMERICA.*

THE points that it is important to consider, if one would write stone specifications that will leave no loopholes for dishonesty or slackness, are the mineral and chemical composition of a stone, strength and durability, effect of weathering, porosity, texture and crystallisation, mode of occurrence (whether massive or stratified), freedom from impurities and method of quarrying. There have been so many serious delays in the furnishing of stone for important buildings that it is getting to be the custom for architects and building committees to inspect competing quarries before large contracts are given out. The man who writes the specifications should also have the benefit of extensive quarry observations, if he is to do his best. A study of the weathering of stone can be made with far better effect as it lies in its natural bed than after it has been placed in a building. Besides, we have few stone buildings of any great age. Many of the most popular varieties of stone now in use have been only a few years on the market. No idea of their durability and weathering qualities can be had unless they are carefully examined where nature laid them down.

Published every Friday by GILBERT WOOD & Co., Ltd., at the Office, 6-11 Imperial Buildings, Ludgate Circus, London, E.C.

The marvellous growth of our cities and the constant shifting of the centres of business and population have heretofore given but a short life to the average city building. But we occasionally erect monumental structures that are intended to endure through generations. With our great public and office buildings, costing millions of dollars each, we have probably now reached a more permanent stage, and the selection of a durable material of construction becomes important.

A great deal of stress is laid on the strength of stone. When crushing tests show a high result the producer of the stone makes a leading argument of the fact in favour of his material. For ordinary building purposes it makes no practical difference whether a stone can withstand a crushing test of three to four thousand or thirty to forty thousand pounds per square inch. A variation of thousands of pounds in crushing strength can be shown by stones from the same quarry, merely by the skill with which the cubes are prepared for testing. Therefore the ordinary crushing-strength tests made for commercial purposes are largely empirical, and the most careful specification need take no further heed of this question than merely to call for stone of "approved strength."

It is strange that specifications rarely, if ever, make a distinction between varieties of stone of the same general class, but widely different in themselves. For instance, if white marble is wanted, the true carbonate of lime marbles and the dolomites are treated in the specifications as if they were absolutely identical. It is not intended in this place to compare the relative merits of the true marbles and the dolomites. Each has its strenuous advocates. But they should not be confused in the specifications. These documents should always give plain evidence that in the office from which they come the two stones will be distinguished one from the other, and an intelligent choice made. One of the most conspicuous and important public edifices in New York is built of the most coarsely crystalline of the carbonate of lime marbles. Some years after it was erected it was desired to build an addition. The choice fell on a very fine-grained dolomite. The former stone is noted for its non-absorbent qualities. A drop of red ink can be allowed to stand on its surface for hours, and when washed off leaves scarcely a trace. The dolomite absorbs the ink

as a lump of sugar takes up coffee from a saucer. It needs no scientist to predict what a lack of harmony there will be between the original building and the addition in a few years time. If the specifications had been carefully drawn so as to require an accord between the stones of the two parts, the choice of this particular dolomite would have been impossible.

Granite specifications present few difficulties. As this is a bedded stone that is won from the earth by blasting, it is necessary, of course, to provide against "starts and powder-shakes." It is also well to require a freedom from sap, as occasionally stains penetrate the stone for a few inches from the surface and along open seams. Many fine granite fronts and columns are disfigured by splotches of black. These could be avoided by a clause requiring that there be no "knots or concretionary nodules on exposed surfaces." The only objection to this is that with some granites it is an instance of asking too much from nature. If a fine-grained granite is desired the words "of uniform texture throughout" should always be included in the specifications. There are often bands of porphyritic formation running through the fine granites, and these must be excluded. If granite is called for and a strongly laminated gneiss finds its way into the building, as frequently happens, this is no fault of the specifications, and need not be dwelt upon.

There is a great deal of looseness in the requirements for granitework. The specifications for a handsome business building recently erected in New York called for "bush-hammered finish," but mentioned no particular cut. The contractor gave a good six-cut job, as this is the usual finish for buildingwork and may be understood in the absence of precise instructions. When the stone was delivered the architect objected; he had specified bush-hammered, he said. After he had been finally convinced that the work came strictly within this category, he showed what it was that he wanted. He pointed to a soft stone, finished with a diamond hammer. As a particular effect was desired, it was necessary to rehammer and painfully rub the stone by hand after it was set in the wall. There have been constant disputes over hammered granitework, but these could all be avoided by care in the specifications. Five grades of fineness are generally recognised,

IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the
Coal Smoke Abatement Society
In Conjunction with
H.M. OFFICE OF WORKS,
At the New Government Buildings in Parliament St., London.

REPORT

(See page 25 of Supplement in Issue of June 8).

As a final result of the whole of the tests the Examiners find that of the
grates submitted those of

Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results. The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear. N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

Works: Heathfield Station, Newton Abbot, DEVON.

LONDON OFFICES: 87 NEWMAN STREET, OXFORD STREET, W.

4-cut, 6-cut, 8-cut, 10-cut and 12-cut. The cost increases with each degree of fineness. If there is any opportunity to substitute the coarser for the finer finish, the contractor is tempted to avail himself of it. The patent or bush hammer was originally made in no other size than with a head seven-eighths of an inch in thickness. The cut then had reference to the number of blades in the head. But if the head is increased to an inch or more in thickness while the number of blades remains the same, it is apparent that this will make an appreciable difference in the fineness of the finish. So it has come about that some people interpret the finish to mean so many cuts to the inch, while others make it mean the number of blades in a standard hammer. Owing to this confusion, specifications should always read:—"To be bush hammered with a patent hammer containing six [or any number desired] blades to a seven-eighths inch head."

With a stone of strongly stratified formation, often running into shalelike laminations, like many sandstones, attention must be paid to the bedding planes. A large part of the trouble that followed the use of brownstone a generation or two ago was caused by a failure to lay the stone on its natural bed. A block would be set on edge and it would continue to scale off, sometimes to a depth of several inches. The architects learned a lesson from this, but they learned it too well. Some of them cannot write a specification without the words "to be laid on its natural bed." Unless a stone is very thin-bedded or of a decided laminated formation, this clause should never be inserted. An expert examination would fail to show the natural bed of very many stones once they are away from the quarry. In these cases the requirement cannot be enforced and so it is worse than useless. Here is one evil that the "natural bed" fallacy may work. A contract is given for a building in white marble, the stone to be free from colour, and to be laid on the natural bed. In most quarries there are bands of colour that generally run at a slight angle to the bed. They do not affect the strength in the slightest degree, but according to the specifications we have in mind, they could not appear on the surface of acceptable blocks. Marble quarries are operated in so-called floors, and one entire floor may be marked by a band of colour. If the blocks were set on edge the colour would not show,

but this the architect will not permit, although any sound marble will weather just as well on its edge as on its bed. Consequently this entire floor of marble must be rejected, and for what the quarryman cannot help thinking is a mere unreasonable whim.

Even in stratified sandstones the bedding planes do not play the all-important part in disintegration that is usually supposed. A striking proof of this is frequently seen. If one will examine the quoins in a building he will very often find that one has scaled with equal freedom on the front and on the side. Both of these cannot be bedding planes, and, in fact, neither one may be.

Special care should be observed, of course, in the preparation of specifications for additions to existing buildings, unless contrast is sought. It is not enough to call for stone of the same general class and appearance. Chemical analysis, texture and strength must all be taken into account. It would be well, if possible, to obtain the new stone from the same neighbourhood from which the old was taken. The same stone varies sometimes in its weathering qualities according to the local conditions under which it was deposited or erupted. An instance showing the danger of using two different stones in the same building is furnished by the State Capitol of Washington at Olympia. Use was made of two sandstones, from different localities, that appeared almost identical at first. Under the influence of weathering they grew very dissimilar. An effort was made to bring the inferior stone back to its original appearance by the use of acid washes. It was an unfortunate expedient, for the treatment only made the defects worse. A striking example of the effect of changing from one material to another is also to be seen in the Washington Monument. The variation in colour, 50 or 75 feet from the base, is so distinct that it can be noticed miles away when the sunlight falls on the shaft.

Apart from the choice of stone, there are certain details connected with the setting that must be cared for in the specifications unless disappointment is to result. It should be remembered that the word "non-absorbent" is only a relative term as applied to stone. The slightest porosity, and all stone is more or less porous, means the possibility of staining, unless it is carefully guarded against. Iron rust will deeply penetrate most stones in a short time,

SHONE'S HYDRO-PNEUMATIC SEWERAGE SYSTEM

The ONLY Perfect System for Sewering Town Areas, Residences, Public Buildings.

In Operation at Eastbourne, Southampton, Warrington, Fenton, Henley-on-Thames, Houses of Parliament, Heston and Isleworth, Hampton Wick, Rangoon (Burma), Campos (Brazil), Slaughter Houses, Moscow, and numerous other places.

Manufacturers—HUGHES & LANCASTER, Albany Buildings, 16 Victoria Street, Westminster, S.W.

and oil is a common disfiguring agency. In the central part of the State of New York is a handsome public building erected of a choice marble. It was set in Portland cement instead of a non-staining cement, and the blocks were not even treated with asphaltum. As a result the stone is terribly stained. The quarry that furnished the material was almost ruined, for the natural assumption of those who did not know the facts was that the marble itself was worthless. This is a case where the specifications were evidently at fault. Carelessness or ignorance in inspection and supervision of buildingwork frequently works an injury to the material itself. The blame in such cases, too, unjustly falls on the quarry. In the erection of one of the costliest and most elaborate buildings in New York the exhaust pipes of the hoisting engines were turned towards the walls. Day after day they continued to belch against the delicate stonework showers of steam impregnated with dirty oil from the cylinders. The effect was not noticed until the engines had long been removed and the walls were cleaned down. To this day many architects and stone men believe that the stains, which cannot be eradicated, are a natural defect in the stone.

If one were permitted to sum up the question of stone specifications epigrammatically, it would be, "Do not ask of nature more than she can give. But where she has been generous let not greed, nor ignorance, nor carelessness spoil her gifts."

FIRE RISKS.*

NEXT to matches as a cause of accidental fire comes the firing of woodwork by faults in flues or overheating in the vicinity of the fireplace. One would imagine that such a thing as building a beam into a chimney, or laying a joist close under the hearth of a firegrate would be so manifest a danger as to insure it never occurring, but such criminal carelessness is by no means so uncommon as one might imagine, and in such cases it is only a question of time and chance for a fire to be caused by it.

* From the Cantor Lectures on Fire, Fire Risks and Fire Prevention, by Professor Vivian B. Lewes.

A beam, the end of which impinges on the interior of a flue, may be so far above the grate that for years no trouble arises, but the hot upcurrent of gases in the chimney will gradually dry and carbonise the wood, whilst any collection of soot in the chimney catching fire will start a smouldering combustion in the beam that may go on for a considerable time before it gets sufficient air to cause it to break into active combustion.

A more usual source of danger is to be found in the perishing of the mortar used in building the flue, and so leaving gaps in the brickwork behind which the woodwork is situated. Mortar practically consists of a mixture of slaked lime and sharp sand, and when brickwork has been laid with this, the first hardening of the mortar is dependent upon the slaked lime absorbing carbon dioxide from the air, which converts it into carbonate and causes it to harden, whilst after a lapse of many years a further action takes place by the silica of the sand acting on the calcium carbonate to form a silicate of great hardness and strength. With modern buildings, however, the first action is the only one that has taken place.

The brickwork in the interior of a flue is often very roughly laid, being out of sight, and the bricks, instead of being laid true and nearly touching, are made up with broken bricks and a considerable quantity of mortar. After this has set, the action of heat upon it is again to burn the calcium carbonate back to lime, so causing the crumbling down of the mortar, and should a joist have been built in close to the casing of the flue, hot gases will find their way through the perished mortar to it, and gradually bring about slight carbonisation of the wood, and occasionally cause its ignition.

Another fruitful source of danger is to be found in the replacement of one form of grate or fireplace by a new one. For instance, a grate is getting rather old, and you determine to have it replaced by one of modern construction, say one of the well fires. In the old grate the hearthstone was flush with the floor, and under this was a sufficient mass of concrete or mortar amply to protect the joists below from undue heat. You probably buy a new grate from a local ironmonger and entrust him with the job of fixing it, and the old hearthstone and insulating material having been removed to make way for the entirely different struc-

ture, the inexperienced workman fails properly to insulate the bottom of the well-grate, with the result that the joists below get overheated.

Dangers of these characters can only be got over by strict supervision during the building of a house, and by entrusting alterations and repairs only to workmen who thoroughly understand the work which has to be done.

All heating dangers are largely increased, and indeed chiefly exist from the fact that lightly charred wood becomes almost pyrophoric in its character, and can readily be set on fire at temperatures considerably below those needed to start the combustion of either uncharred wood or charcoal. The changes taking place in wood under the influence of long-continued heating are of a complex and interesting character.

Wood consists mainly of a definite chemical compound called cellulose, a body formed from carbon, hydrogen and oxygen, and besides cellulose we find wood contains the constituents of the sap and a varying quantity of water. The amount of water present depends upon the season of the year and the portion of the tree from which it is taken, whilst the percentage is as a rule greater in soft than in hard woods, the following table giving an idea of the quantity present in various kinds of wood:—

Beech	18.6 per cent.
Oak	34.7 ..
Common fir	32.7 ..
Alder	41.6 ..
Elm	44.5 ..
Poplar	50.6 ..

When wood is placed under cover and exposed to the air for about a year the moisture is reduced to about 20 per cent., and the remaining moisture can be got rid of by subjecting the wood to the action of heat, the last portions requiring a temperature sufficient to char the wood. If, however, the wood be heated somewhat below this point the greater part of the moisture is removed; but on again allowing the wood to cool to atmospheric temperatures and exposing it to the air, the hygroscopic nature of the wood gradually attracts moisture until the percentage reaches about 20, at which point a sort of equilibrium is established between the moisture in the air and the wood.

When wood is exposed to the long-continued action of

heat it undergoes progressive changes nearly akin to those which have taken place during the conversion of vegetation into coal. Up to 100 degs. C. (212 degs. F.) practically only moisture is expelled from the wood, and at a few degrees above this point not only water but volatile hydrocarbons are slowly driven out, whilst at 150 degs. C. (302 degs. F.) oxides of carbon, together with more hydrocarbons, are disengaged, and slightly above this temperature the wood commences to assume a scorched appearance and to turn brown. At about 250 degs. C. (482 degs. F.) wood is converted into a soft brownish form of charcoal, which is its most dangerous form, being highly pyrophoric and self-igniting at comparatively low temperatures. At 300 degs. C. (572 degs. F.) the carbon begins to assume the appearance of soft black charcoal, getting harder and more metallic in its properties as the temperature increases.

The chemical changes which are taking place in the charcoal at these varying temperatures are strictly shown by the following table:—

Temperature.	Carbon.	Hydrogen.	Oxygen.	Ash.
270 degs. C.	71.0	4.60	23.0	1.40
363 degs. C.	80.1	3.71	14.55	1.64
476 degs. C.	85.8	3.13	9.47	1.60
519 degs. C.	86.2	3.11	9.11	1.58

It is seen that as soon as 270 degs. C. is reached the action consists in a gradual increase in the percentage of carbon, owing to the elimination of hydrogen and oxygen, and it is clearly due, therefore, to compounds still containing these three elements in comparatively large proportions that the pyrophoric carbon owes its dangerous character. If the contact of the wood with the heated surface be continued for a sufficiently long period of time, a temperature of a few degrees only above the boiling-point of water is enough to produce a semi-carbonised film on the wood, which will start smouldering at a very low temperature, the heat rising from an oil lamp or gas flame some distance away being sufficient to start the smouldering combustion. Indeed, the temperature of a steam-pipe has been found sufficient to cause ignition, this being due probably to the long-continued heat generating certain hydrocarbons of low ignition point, which remain occluded in the pores of the semi-charred wood, and are there brought into close contact with the occluded oxygen.

THE "DRAWWELL" GRATE

WAS PLACED

First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

Art Plates from "The Architect."

AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION
AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which
have appeared in "THE ARCHITECT" can now be obtained in a
separate form on proof paper suitable for framing.

The Corn Field.—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOUIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudouin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial*. "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage*. "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudouin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*AND NUMEROUS OTHERS*.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

TENDERS, ETC.

** As great disappointment is frequently expressed at the non appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 p.m. on Thursdays.

COMPETITIONS OPEN.

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. TRADE NOTES.

THE Columbian Fireproofing Company, Ltd., 37 King William Street, E.C., have been successful in securing the following contracts:—*Morning Post* buildings, Strand, London; new building adjoining Bond Street Tube station, London; Washington Street bonded warehouse, Glasgow.

MESSRS. CARTER & Co., of Poole and Hamworthy, have removed their London offices from 43 Essex Street, W.C., to 29 Albert Embankment, where they have ample facilities for showing their designs and samples of tiles, glazed fire-places, dadoes, floors, &c.

BUILDING AND BUILDERS.

A SYNDICATE are negotiating for the purchase of a site at Sleaford, Lincolnshire, for the purpose of erecting a sugar-beet factory at an estimated cost of 60,000l.

A MOVEMENT has been started among the various trade unions in Blackburn to erect a large central Trades Hall in which all the business connected with the unions can be transacted.

THE Blackburn Town Council will consider a resolution proposed by one of the members with the object of enforcing more stringently the fair contracts regulations of the Corporation. It provides, among other things, that no contractor shall be allowed to tender who prohibits his work-people from joining their respective trade unions, and includes also the following remarkable clause:—"Should any dispute arise as to whether a contractor is carrying out the provisions of this fair contracts clause any charge made against the contractor shall be deemed to be established unless he shall disprove the charge."

THE auditor of the accounts of the Manchester education committee makes the following remark on the elementary education accounts:—"The whole cost of the internal painting, whitewashing, &c., of non-provided schools has been paid out of the education funds by the education committee, and no part of the cost of such work would appear to have been recovered from the managers. Attention was called in my last report to the cost of certain repairs being

MARPEDO WHITE JAPAN

SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

wholly met by the committee, whereas only a proportion of such expenses should have been borne by you (vide section 7 (1) (d) of the Education Act, 1902). In connection with this matter the Board of Education in a letter dated October 5, 1905, addressed to the Norfolk education committee, stated, *inter alia*, that 'the Board consider that internal painting, whitewashing, colouring, varnishing the walls, ceilings and woodwork are *prima-facie* the duty of managers, subject only to the obligation of the local education authority to defray so much of the expenses as they consider due to fair wear and tear, &c.'

ELECTRIC NOTES.

AN electric-light power-station is being erected at Portland. It will generate all the power required for use in the Government offices, hospital, canteen, &c.

THE Government of New Zealand intend to erect a power-house for the purpose of utilising the waters of the Kaituna river in connection with a scheme to supply the Waihi goldfields with electricity.

THE electricity committee of the Salford Corporation have decided to recommend the Council to make application to the Local Government Board for sanction to borrow a sum of 10,000*l.* to cover the cost of the purchase of motors to be hired out to the public, as authorised by the Salford Corporation Act, 1900. They also desire sanction to borrow 25,000*l.* to cover necessary extensions and work on services during the next two years.

THE Carron Company are in keeping with the times by introducing "electric radiators" for general use. No. 1, consisting of ornamental cast-iron front and top, ground and berlin-blackened, four powerful electric heating lamps connected in circuits of two lamps controlled by separate switches, polished copper reflector in three pieces, complete with 6-feet lengths flexible cable, plug and socket for fixing, 18 inches wide by 25½ inches high, can be obtained for 100*s.* 6*d.* each. The maximum consumption per hour 1.06 Board of Trade units. Glow-lamps will burn 1,000 hours without renewal.

MR. J. F. C. SNELL, electrical engineer of the Sunderland Corporation, has decided to relinquish his appointment and

set up as a consulting engineer. The sixty-nine applicants for the vacancy have been reduced to the following:—Mr. Alfred S. Blackburn, of Bradford; Mr. A. A. Day, Bolton; Mr. H. F. Proctor, Bristol; Mr. C. E. C. Shawfield, Wolverhampton; Mr. C. D. Taite, Salford; and Mr. T. P. Wilms-hurst, Derby. The salary begins at 800*l.* and rises to 1,000*l.*

VARIETIES.

THE Altrincham Urban Council are going to proceed with a scheme providing for the erection of six blocks of workmen's dwellings.

THE inventory of the heritable and movable estate of the late John Fyfe, granite merchant, Aberdeen, has been lodged with the Sheriff-Clerk at Aberdeen. It amounts to 306,218*l.*, on which 9,986*l.* estate duty has been paid.

THE Sanitary Inspectors' Association will hold their congress at Blackpool from September 12 to September 17. Sir James Crichton Browne will deliver the presidential address. The delegates are expected to number nearly 400.

THE Waterloo-with-Seaforth Council have received the sanction of the Local Government Board to a loan of 14,500*l.* in connection with an improvement in the sewerage of Waterloo. The work is to be carried out by the Council's workmen.

THE sanitary committee of the Manchester Corporation are desirous of having included in the next Parliamentary Bill a clause for power to obtain a clearer definition of "sewer" and "drain" under the Public Health Act, 1875. The Parliamentary committee have informed them that as at present advised it is not anticipated that any application will be made in Parliament for a General Powers Bill in the next session.

THE brass and iron hinge-makers of the country, who have for a long time past complained of excessive competition and low prices, have just formed themselves into an organisation for putting the trade upon a better footing. The whole of the makers of the kingdom have consented to join and a list of prices has been agreed upon which shows a considerable advance upon those lately ruling, and places the trade in a position to obtain a profit on the orders executed. Severe penalties attach to underselling.

NEW PREMISES, NO. 27 MADDOX STREET, W.

LANTEGLOS-BY-POWEY, AFTER RESTORATION.

CARLE KEMP, NORTH BERWICK.

AN automobile bridge, the first of its kind as far as is known, has been erected by the Roswell-Torrance Mail and Passenger Stage Line in New Mexico, to span the Macho, a creek on the route. The bridge is so constructed as to prevent the passage of cattle, and is built without supports in the bed of the stream because of the heavy freshets. There is no floor, so that cattle can get no footing, and the automobiles cross on low-railed tracks on either side. The bridge has a total length of 64 feet.

THE Parliamentary committee of the Manchester Corporation, in response to a letter asking what assistance the Corporation would render to a scheme for an underground railway and tramway (plans for which, it is understood, will be deposited in November next), have replied that they adhere to their resolution of October 22, 1903, and that they are not prepared to grant any facilities as regards the promotion of such a scheme.

THE Worcester City Council decided on Tuesday to obtain closing orders with reference to a number of old buildings. The Mayor assured the councillors that no buildings of archaeological interest would be destroyed if possible, but old buildings, however interesting to the antiquarian, could not be allowed to remain at the expense of health or to prevent necessary street widening. It was decided to take photographs of buildings previous to their demolition.

COLONEL A. G. DURNFORD held a Local Government Board inquiry at Clutton into the application of Clutton Rural District Council for sanction to borrow 22,000*l.* to supply various parishes with water. It was asked that repayment be extended over the longest period—preferably forty years and even sixty years, if that could be done. The inspector said that probably thirty years would be the longest period. Mr. W. F. Bird, C.E., is acting as engineer.

THE Scarborough Harbour Commissioners reported at the annual meeting that the state of the foundation of the east pier for about 150 feet adjoining the connection with the wall of the Marine Drive had given much concern. Some damage had evidently been caused by the heavy sweep of the sea along the wall of the drive, and the Commissioners had asked the Corporation to build a groyne or groynes out from the wall, or to take some other steps to stop the scour of the sea.

THE water committee of Aberdeen Town Council have agreed to recommend to the Town Council that steps be taken to obtain Parliamentary powers for a new water-supply for the city from the river Avon. The scheme has been under consideration for some time, and it is now proposed to proceed at once with the engineering survey. A plan of the proposed line of aqueduct from the Avon to Countesswells was submitted to the committee, along with a supplementary report, in which it was set forth that the total cost of the Avon scheme, including the purchase of land, wayleaves, &c., would amount to the sum of 940,000*l.*

THE Lincoln Corporation, in the course of their boring operations for a new water-supply at Boultham, have reached a depth of 2,014 feet, the red sandstone, which is the water-bearing strata, having been well pierced, and the experts have now advised that there will probably be no necessity to penetrate the rock to a greater depth. Accordingly the waterworks committee of the Lincoln Corporation have decided to suspend boring operations and proceed to erect pumping machinery. Then probably a month will be taken up in making a thorough and complete test of the water, as to its fitness for domestic use, and should this test prove satisfactory, as there is every reason to believe it will, the Boultham water will be turned into the mains.

FOR the man whose business takes him from London to Doncaster for the whole of the race week special arrangements have been made by the Great Central Railway Company, enabling him to accomplish his journey not only in comfort but at a very cheap fare. On Monday, September 10, a special luncheon car express will leave Marylebone at 1.15 P.M. Return fares, first class, 28*s.*; third class, 14*s.* On Wednesday and Friday you may

THE LEEDS FIRECLAY COMPANY LTD

LONDON OFFICE 2 & 3 NORFOLK STREET STRAND.W.C.

Journey to Doncaster and back for 33s. 6d. first class, and 18s. 6d. third class, including *table d'hôte* luncheon and dinner *en route*. The trains are timed to leave Marylebone on St. Leger day at 8.48 A.M. and Cup day at 8.15 A.M. Cheap excursion tickets are also available by these trains, 27s. first class and 13s. 6d. third class. For the convenience of passengers, and to avoid the crowd at Doncaster station, these trains will arrive at and depart from St. James's Bridge station, from which place electric cars run direct to the course. In this outing the railway company provides everything to contribute to the enjoyment and comfort of the visitor from London.

THE epileptic colony established at Langho, near Blackburn, by the Manchester and Chorlton Boards of Guardians was opened on the 3rd inst. The estate comprises 166 acres of elevated and undulating land. The number of buildings at present erected is sixteen. These, however, occupy only a small portion of the estate, which affords ample space for future expansion of the colony. The existing buildings provide accommodation for 272 patients and the necessary officers and staff. The patients will be housed in separate "homes," each containing forty beds. The entire cost will be about 180,000/. The contractors were Messrs. Mill & Sons and the architects were Messrs. Giles, London.

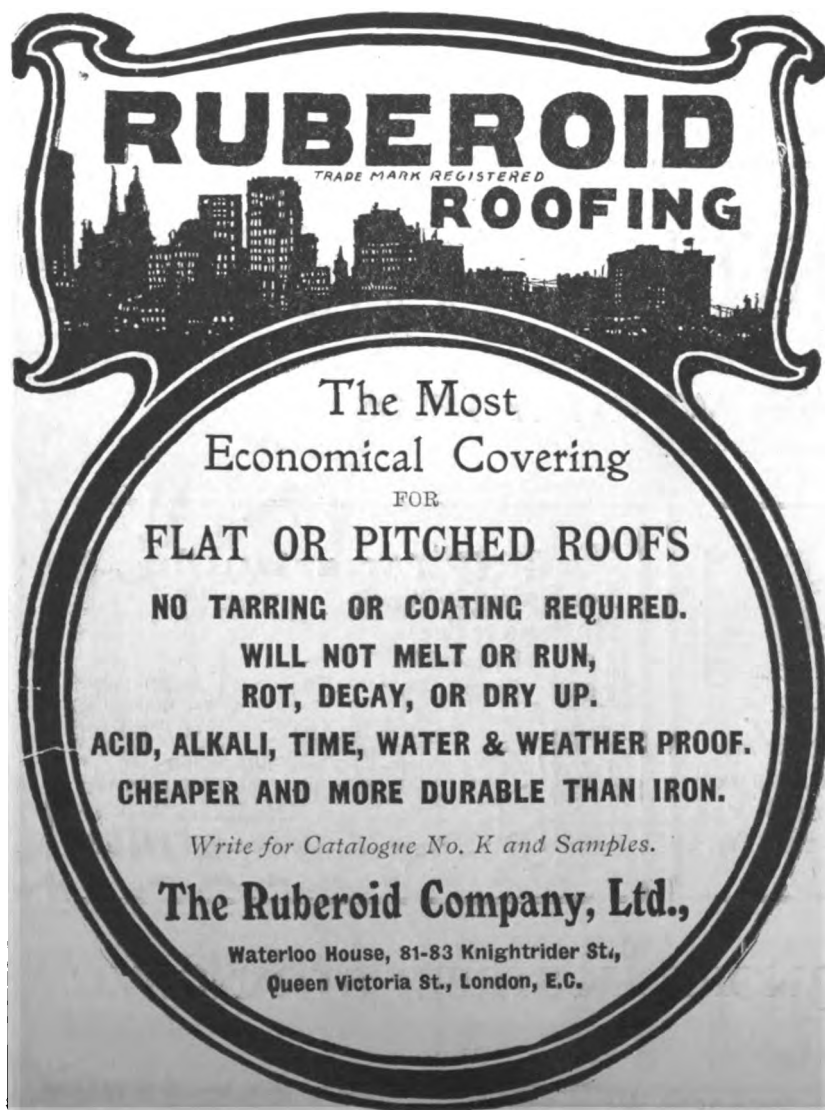

THE Concreters and Asphalters' Association met in Manchester on Saturday, and passed a resolution to the effect that one month's notice be given to architects, surveyors and builders, and all others concerned, that in future members of the Association will refuse to prepare any ground for patent flooring, terrazzo, &c., where cheap foreign labour is employed to displace British labour. It is contended that in future such work should be done by members of the Association, and under proper conditions. The meeting also approved of an alteration of rules for admitting to membership those who follow the wood-block flooring trade. It was further agreed to create a section of the Association for the concrete and asphalt labourers, who number five hundred in Manchester and the surrounding districts, and another section for bricklayers' labourers and others.

LORD SELBORNE'S RESIDENCE.

THE Transvaal has had a history of makeshifts, and it was quite in the nature of things that when the centre of South African politics was removed to Johannesburg the High Commissioner should have a makeshift residence in a suburban villa only a little less modest than its neighbours. Social as well as administrative duties attach to the office, and the little house at Parktown was never adequate to the fulfilment of these. In his new residence at Pretoria, however, which is almost ready for occupation, Lord Selborne, according to the *Transvaal Leader*, will have a home worthy of the King's representative.

A country makes its own impress upon architecture sooner than on any of the other arts. In new lands the styles are at first naturally importations, but the conditions inevitably modify the type until something distinctive is produced—something which bears the local stamp as unmistakably if not as obviously as the configuration of the land. It was to be expected that South African architecture would be an adaptation of the Dutch form, but the style has evolved in a manner which makes it the ideal type of residence in a land of perpetual sunshine and a crystal atmosphere. Groot Schuur is the outstanding example of the work from which a South African school of architecture may spring, and the new house which has been built for the High Commissioner at Pretoria carries the type a stage further. Both are the work of the same architect—Mr. Herbert Baker, of Baker, Macey & Sloper—and in both Mr. Baker has achieved full artistic success.

The Pretoria residence, still unnamed, is on the estate of Bryntirion, at the eastern spur of the ridge overlooking the valley, which rises on the other side in the circle of fort-crowned kopjes that girdle the capital. The view is a magnificent one—quite as extensive if not as green as that from Queen Mary's Lookout in Stirling Castle. The house has been designed on Dutch lines, with South African adaptations, and is much larger than Groot Schuur, though the inquiring taxpayer will be pleased to learn that it was less costly. The main front is surmounted with three quaint Dutch gables, and a square-roofed low-windowed

wing on the western side relieves the precision of the design while harmonising admirably with the general plan. The visitor's first impression is that of a spacious and stately mansion, brilliantly white against a brilliant sky, flanked on one side by the wing referred to and on the other by vine-clad pillars and a beautiful lawn. The central gable rises above the entrance and a stone-columned porte cochère gives dignity to the porch. The vestibule is small but in capital taste. Red Warmbaths stone has been used throughout, and a massive block over an inglenook bears an inscription which testifies that it was laid by Sir Arthur Lawley in September of last year. A short flight of red stone stairs leads to the spacious corridor, which gives access to the rooms on the first floor. Chief among these is the great banqueting-hall, the principal room of the house and the finest apartment in any dwelling in South Africa. Dignity has not been sacrificed to decoration, and the interior is magnificently plain. Above the polished teak panelling the walls are white, and the roof is crossed by dark joists of roughly-dressed timber. The feature of the room is a splendid bay window two storeys in height, and as deep as an ordinary room, which at once lights the hall and gives one a glimpse of the wide panorama of veld and kopje without. The fireplace is of Steenpan stone, unornamented save for the Royal arms, and the fire-back is a handsome specimen of bronzework. A gallery for musicians has been placed above the door, and the upper corridor forms a balcony destined to witness many historical gatherings.

Adjoining the banqueting-hall is the drawing-room, a spacious light apartment, entirely decorated in white. The dining-room is opposite—less large than the others and less brilliantly lit, but commodious and dignified. Modern convenience is consulted in the placing of a serving-room in contiguity with the dining-room. The private apartments at this end of the house include a very pleasant morning-room looking out on the garden, and a billiard-room with a dark rafted roof, and all sorts of ingenious devices for storing cues and the other fittings of the game. The upper floor of the main block is entirely private. There are several state suites of bedrooms remarkable for their comfort no less than for their elegance.

The side block contains the kitchen and kindred offices

and the servants' quarters generally. The kitchen deserves particular mention as an example of common sense applied to Domestic architecture. It is not a particularly large room, but the architect has made it almost as lofty again as it is broad and long. This means perfect ventilation, as much coolness as is possible in a kitchen, and insures that the culinary odours shall not penetrate other parts of the house. The fittings here and in the pantry are models of completeness, and the servants' quarters are models of comfort. At the opposite end of the house, away from the private apartments, is a suite of offices in which the High Commissioner will transact affairs of State. The A.D.C.s have their rooms directly under.

But the most charming feature of the house is not within the walls. Directly behind, Mr. Baker has designed one of the most delightful gardens in the country. A white-columned atrium and colonnade, with paved floor, shady and cool and airy, reminds one of a Spanish courtyard, and when a few orange-trees have been planted in pots the resemblance will be perfect. Beginning at the wing which looks over the valley, all the space between the house-walls and the rocky edges of the kopje has been made garden. Just outside the High Commissioner's office a long pergola, whose white pillars will by-and-by support creeping vines, shades a quaint little lawn and rockery, in which the Administrator may stroll when he is weary of the cares of State. There is a lovely English lawn, already as green and smooth as a Devonshire bowling-green, its borders gay with flowers. Every nook and cranny of this private garden, which is almost part of the house, has been beautified. The edges of the kopje have been built up with rock, and from this flower-bed one may look down into the valley as from a glorified balcony of nature's making, and view the rolling veld and the grim hills beyond. It is an unrivalled example of making the wilderness into a garden for the house beautiful. The park—if an old English name may be borrowed for the acres of veld before the house—will be used partly as a paddock, and in the lower stretches the clever gardener who has done so much for the adornment of the estate has already established a splendid garden. In a few years, when the trees have passed their infancy, they will enfold a residence fit for a High Commissioner.

The furniture will harmonise with the general character of the building, and many fine examples of old Cape Dutch furniture have been bought within the last few months. Dutch tiles have been brought from Holland and set into the walls for which they are suited.

Altogether the new residence is in every way a notable work and one which confers credit on all connected with it. The builders were Messrs. Edmanson & Thomas, of Johannesburg, and Mr. D. F. Ellis supervised the practical details of construction, while Mr. Herbert Baker, the architect, of course superintended the whole.

NATIONAL HARBOUR OF REFUGE.

In 1857, owing to strong pressure on the part of shipowners, underwriters and others interested in the safety of shipping and of the lives of fishermen and seamen, a select committee was constituted, and was followed by a Royal Commission in the following year. Nothing of a sufficiently definite character having resulted from these inquiries, the County Councils of Devon and Cornwall took the matter in hand, and called upon Sir Wm. Matthews. Discarding, for various reasons, Clovelly, Lundy Island (which affords a natural shelter from south-west gales), Newquay, and other suggested sites, Sir William Matthews has adopted St. Ives as the best suited for a harbour capable of admitting the largest of the ocean liners, while also affording a refuge for the mass of shipping associated with the fishing industry and the coasting trade.

In this judgment he is supported by the Select Commission of 1858, which recommended an expenditure of 174,000*l.* in the construction of a breakwater 2,000 feet in length, a sum which he declares, however, to be manifestly inadequate for the purpose. The Royal Commission of 1859 recommended St. Ives Bay also, and suggested that 400,000*l.* should be expended on the construction of a breakwater 3,750 feet long. "This estimate," Sir William declares, "is also entirely insufficient, and was based on a section consisting of external walls filled in with a hearting of loose rubble, a mode of construction which would certainly have proved disastrous in view of the heavy seas to

which such a work on the lines recommended would have been subjected." Sir William's own estimate of what is required involves an expenditure of 847,000*l.*, and the building of a breakwater 2,500 feet long, extending from just off the Merran Rock commencing on a curve generally in an east-south-east direction, and subsequently trending towards Hayle Bar. In addition (and included in the estimate of cost) he suggests the building of a spur on the Feather Bed Rock just south of the Merran, the outer end of which would be 500 feet landward of the western end of the proposed breakwater, leaving a good opening of that extent for circulation purposes.

As an alternative scheme Sir William recommends the building of a breakwater 1,500 feet in length as an isolated work, and leaving an opening between its western end and the shore at a cost, including the spur on Feather Bed Rock, of 400,000*l.* As soon as the report is printed a joint committee of the two County Councils, with, it is hoped, Mr. H. T. Ker and Mr. A. T. Goode, who assisted Sir William, will consider the details and the raising of the necessary funds. It is hoped that a larger scheme may prove practicable, and have national support as providing means for the saving of many thousands of pounds' worth of shipping and cargo and many thousands of lives each year.

THE LATE MR. GEORGE WOOLLISCROFT.

The well-known brick and tile manufacturer, Mr. George Woolliscroft, died last week at his residence, Cornhill, Leek, in the eighty-second year of his age. Mr. Woolliscroft had been confined to the house for a month and the cause of death was cancer. Mr. Woolliscroft, who was a most active, busy man for a long period, was, according to the *Staffordshire Advertiser*, the son of a farmer, and was born at Fulford, near Stone, on March 7, 1825. He was educated at the village school, afterwards at Mr. Robey's, Longton, and finished his education at a school at Shooter's Hill. Commencing his business career as an apprentice to a cabinet-maker at Longton, he enlarged his experience at Manchester, Liverpool and London. He had a brother who took the Crown inn in the village of Red Street, near

Chesterton, together with a malt-kiln and some land adjoining, but was unexpectedly prevented going into occupation. Mr. Woolliscroft returned to North Staffordshire with a view of temporarily filling the vacancy, but he remained there for six or seven years. In 1851 he took the Eagle and Child, Chesterton, and a brickyard and land near the inn. About that time he entered the round timber trade for the purpose of supplying props used in mining operations. Soon afterwards he commenced buying encaustic tiles, and about 1878 he purchased the tileworks formerly conducted by Mr. W. Ridgway at Hanley. About the same time he leased some land at Etruria and began to manufacture quarries, ridge and roofing tiles. When Mr. Woolliscroft became the proprietor of the tile works at Hanley nothing was made there but flooring tiles. He quickly added the manufacture of ordinary glazed tiles, and later decorated tiles of every description. Mr. Woolliscroft engaged one of the best ecclesiastical artists to be met with, and some wonderful work has been executed by him at St. Columba's Church, Sunderland; the Church of the Blind, Liverpool; Armagh and Letterkenny cathedrals, and elsewhere. Some remarkably fine examples of faience work have also been produced by the firm. At the Etruria works at the outset Mr. Woolliscroft was faced by an almost overwhelming difficulty, which by persistent efforts he not only overcame, but turned to advantage. Several feet below the surface a solid bed of rock was met with, rendering it difficult to get the clay. But it was found by tests that by mixing the rock with the clay the material was greatly improved for wearing purposes. Much success was met with in paving and other bricks. Not only was the material suitable to the purpose, but a special system of firing was adopted, and the firm patented a machine by which the bricks were subjected to a squeeze of 40 tons both at top and bottom. Another patent at the works is a coping press which makes the most perfect and true coping. In 1892 Mr. A. E. Blizzard joined Mr. Woolliscroft as a partner in the business, and two years later the firm was converted into a limited liability company, of which for some years Mr. Blizzard was managing director and chairman. Mr. Woolliscroft some time ago relinquished his place on the directorate, but was represented on the Board by members of his family, while he continued in other respects to retain a large interest

in the concern. There are employed at the works at Chesterton, Etruria and Hanley about 400 hands. In March 1905 when he attained his eightieth birthday, he entertained the workpeople at dinner, and the staff and operatives on their part testified their esteem for him by presenting him with a life-size portrait of himself, accompanied by an illuminated address. For the last six or seven years Mr. Woolliscroft has resided at Leek, but he continued till quite recently to visit the works at Hanley almost every day in the week. He was a surprisingly alert business man, who was held in the greatest respect by his fellow men in the borough of Hanley and the town of Leek.

FIRES IN FACTORIES.

THE President of the Local Government Board has had a circular prepared relating to provisions for aiding in the escape from fire by workers in factories. Section 15 of the Factory and Workshop Act, 1901, empowers every district council to make by-laws providing for means of escape from fire in the case of any factory or workshop, and by-laws so made are subject to the confirmation of the Local Government Board. Model by-laws have been drawn up after consultation with the Secretary of State. In view of provisions made in Section 14 of the Act of 1901 for factories and workshops in which more than forty persons are employed, the model by-laws have been confined to cases not coming within the limits of that section. The chief clauses are as follows:—

"3.—(1) Every building of more than one storey which or any part of which is used as a factory or workshop shall be provided with adequate stairs or steps, permanently fixed, which shall be constructed so as to be adequately lighted by natural or artificial means, and as to afford direct and unimpeded access from every part of the factory or workshop to the ground floor of the building, and where practicable to an open space on the outside of the building or a public thoroughfare. All such stairs or steps shall be directly connected with landings, corridors, lobbies or passages giving access to every part of the factory or workshop, and shall be provided with a suitable and sufficient handrail. Provided

always that for a period of twelve months after the appointed day the foregoing requirements of this by-law shall not be deemed to apply in the case of a building used as a factory or workshop prior to the appointed day [i.e. the date of confirmation of the by-laws]. (2) In the case of any building constructed for use as a factory or workshop after the appointed day, and in the case of any building constructed for use otherwise than as a factory or workshop in which alterations affecting the form and structure of the premises are made after the appointed day for the purpose of converting the building for use as a factory or workshop, all stairs or steps required to be provided in pursuance of this by-law shall, together with the supports thereto, be of fire-resisting materials. (3) The foregoing requirements shall not apply in the case of a building of which the ground floor only is used as a factory or workshop.

"4. Every building to which the foregoing by-law applies, any floor or floors of which being more than 30 feet from the ground, is or are used for factory or workshop purposes, and in which either more than ten persons are employed or readily inflammable materials are stored, shall, in addition to the stairs or steps required by these by-laws, be provided with means of escape in case of fire by (i.) an external staircase constructed of fire-resisting material; or (ii.) an efficient and suitable fire-escape; or (iii.) ready means of access to the roof of the building, and where practicable to the roof of any adjoining building.

"5.—(1) Every factory or workshop shall in every room in which persons are habitually employed be provided with at least one window, which shall be constructed so as to open easily at the level of the sill, and so that the aperture of the window shall be of an extent sufficient for the easy passage of any person employed in the factory or workshop, and where in any such room there is any window not so constructed, the window or windows that are so constructed shall be distinctly marked for the information of the persons employed. (2) Every window or door giving access to any external staircase or any fire-escape or means of access to the roof shall be distinctively marked for the information of the persons employed.

"6. Every person who, after the appointed day, erects a new building for use as a factory or workshop shall, in and about the erection of the building, and in and about any

works connected with the adaptation or fitting of the building for use as a factory or workshop, comply with every requirement of these by-laws which applies to a building of the like description.

"7. The owner of a building which on or after the appointed day is used as a factory or workshop shall execute all such works and do all such things as are necessary to bring the factory or workshop into a condition satisfying all such requirements of these by-laws as apply to a factory or workshop of the like description. Provided that nothing in or done under these by-laws shall deprive the owner of the benefit of any covenant or condition in a lease or in any other contract of tenancy to which the occupier of any such building is a party, or otherwise prevent the owner from enforcing any right to recover from the occupier or any other person any expenses consequent upon compliance with the by-laws.

"8. Every person who shall offend against any of the foregoing by-laws shall be liable for every such offence to a penalty of 5*l.*, and in the case of a continuing offence to a further penalty of 40*s.* for each day after written notice of the offence from the Council. Provided nevertheless that the Court of Summary Jurisdiction before whom any proceedings may be taken in respect of any such offence may, if the Court think fit, adjudge the payment of any sum less than the full amount of the penalty imposed by this by-law."

PRIZE COTTAGES.

JUDGMENT has been given in the Cleveleys cottage competition. The judges were Mr. John H. Woodhouse, president of the Manchester Society of Architects; Mr. Charles H. Barnsley, Birmingham, past president of the Institute of Builders; and Mr. H. R. Aldridge, secretary of the National Housing Reform Council. Their report to Mr. David Abercrombie, chairman of the executive committee, is as follows:—

The task of adjudicating in classes 1 and 2 of these competitions was rendered very difficult by the great differences in cost among the buildings erected. The conditions asked for "the best and most economical cottage," either single or in pairs, without any limitation as to cost,

and the competitors have built cottages, on some thirty different plans, which can be duplicated at a cost varying from 175*l.* to 500*l.* for each cottage. This variety adds to the interest of the exhibition, and we consider that most of the competitors are to be congratulated on their success in solving their differing problems on practical lines, and in many cases with pleasing architectural result, although we think that some of the buildings are too large to be considered as "economical cottages." Taking as our first consideration the ratio between cost and accommodation in each case, we selected, after careful study, a number of cottages which were fairly entitled to be called economical. Of these several were disqualified through faults of planning, while a few cottages, with very excellent and economical plans were so lacking in architectural character that we excluded them from the list of awards. Other cottages possessing many valuable features were disqualified as a result of their incompleteness at the time of our award. Of the remaining cottages we very carefully compared the architectural character, economy and convenience of planning, soundness of construction and cost of maintenance, and we award as follows:—

Class I.

First prize (100*l.*).—Exhibit No. 27. Architect, Albert E. Done, Blackpool; builder, various local builders.

Second prize (50*l.*).—Exhibit No. 14. Architect, Bertram Drummond, Blackpool; builder, J. Preston & Sons, Fleetwood.

Third prize (25*l.*).—Exhibit No. 22. Architect, Patrick Abercrombie, Chester; builder, E. Saville, Blackpool.

Honourable mention.—Exhibit No. 32. Architect and builder, Lancaster & Atkinson, Fleetwood. Exhibit No. 24. Architect, Gilbert Fraser, Liverpool; builder, Lancaster & Atkinson, Fleetwood. Exhibit No. 8. Architect and builder, Dickinson & Kirkham, Bolton.

Highly commended (not for competition).—Exhibit No. 13. Builder, J. P. Wilson, Fleetwood. Exhibit No. 31. Architect, Tom G. Lumb & Co., Blackpool.

Class II.

First prize (100*l.*).—Exhibit Nos. 42 and 43. Architect, G. Mangnall Bluhm, St. Annes-on-Sea; builders, Lancaster & Atkinson, Fleetwood.

Second prize (50*l.*).—Exhibit Nos. 25 and 26. Architect, T. Faulkner Shephard, Birkenhead; builders, Leech & Sons, Cleveleys.

Third prize (25*l.*).—Exhibit Nos. 11 and 12. Architect, Alfred T. Martindale, Bridlington; builder, T. V. Martindale, Bridlington.

Honourable mention.—Exhibit Nos. 28 and 29. Architect, John H. Mawson, Cleveleys; builder, Thomas Riley, Fleetwood.

THE CURZON COLLECTION.

At Bethnal Green Museum there is now on view in the central hall of the building, which it entirely occupies, a large portion of the Asiatic collection of Lord Curzon of Kedleston, made by him in the course of his travels in the East during the last twenty years, and notably during the seven years from 1898 to 1905, when he was Viceroy and Governor-General of India. This collection illustrates chiefly the art of India, Burma, Nepal and Tibet, but specimens are also included of the art productions of Turkey, Persia, Afghanistan, Siam and China. It thus embraces in a single survey the majority of the countries on the mainland of Asia, and presents a comprehensive picture of some at least of the principal artistic manufactures of the East, as well as many interesting personal mementoes of Lord Curzon's term of office in India.

Upon the right hand, on entering, are a number of objects connected with the celebration of the famous Coronation Durbar at Delhi on January 1, 1903, which was presided over by Lord Curzon. Here may be seen two of the embroidered coats worn by the trumpeters, one of the silver trumpets with banderoles used by them, and the tabard with the royal arms worn by the herald who read the proclamation.

Hard by are framed photographs of Lord Curzon and the late Lady Curzon in the robes that were worn by them at Delhi, and a sketch in oils made for the official picture of the State entry on elephants, which is the property of the Government of India.

The adjacent cases contain a number of caskets in silver, ivory, wood and other materials, presented to Lord Curzon

by municipalities and other public bodies in India, many of them of purely Oriental design, the remainder showing Western ideas. With these are displayed a number of richly embroidered bags and cases for addresses, kharitas (official letters), and ceremonial garlands made of thread of pure gold.

The Indian silverwork also includes a footstool and anklets of Baroda workmanship, and jewellery from the remote hill States in the Himalayas.

In neighbouring cases may be seen two *lapis lazuli* and silver tables, presented to Lord Curzon by the Ameer of Afghanistan, as well as a tall brass candelabrum of curious pattern from Kabul; and a large selection of objects purchased by Lord Curzon at the celebrated Art Exhibition at Delhi in January 1903. These include specimens of the best Indian wood-carving in tables and screens, inlaid coffers and cabinets from many parts of India, ivory boxes from Vizagapatam, and articles in the various metals and in jade. A separate case is assigned to the carved sandalwood and the inlaid ivory and rosewood manufactures of Mysore. Beyond these are the delicate ivory carvings of Murshidabad in Bengal, representing groups of native life, chessmen and sacred images. Hard by is a collection of old Indian bronzes, representing figures in the Hindu Pantheon, which were dug up and sold as treasure-trove at Coimbatore in Madras. Jaipur is represented by several beautiful specimens of its costly enamelwork upon a background of pure gold.

At the upper end of the hall, upon either side, may be seen domestic utensils, temple lamps and furniture and sacred images collected by Lord Curzon in Sikkim, Nepal and Tibet, all of which illustrate a common religion and style. Several of the smaller seated figures of Buddha were presents to the Viceroy from the ruling lamas at Lhasa and Shigatse, in Tibet, and are still clothed in their original silk wrappings of the sacred colours.

Attention may also be drawn to the large collection of bronze and copper teapots, beer-jugs and water-pitchers in use among the Tibetan monks and people, and to the richly-carved upright temple lamps. Here also are a very decorative gilt pole, used as a trumpet-rest at Lhasa, a temple trumpet of prodigious length, a large manuscript with carved wooden covers, a handsome metal helmet, a

necklace of human thigh-bones, a drum composed of two skulls, and charm-cases, &c., as used by the Tibetan monks in their priestly incantations.

A sharp transition carries us to the more refined products and the less forbidding conceptions of two other Buddhist countries, Siam and Burmah. These consist of encrusted and lacquered woodwork, chased silverwork and coloured faience from Chantabun; and, in the case of Burmah, of the red and black lacquer of Pagahn, the gold lacquer of Prome, the chased silver ware of Mandalay and Rangoon, the carved ivory of Moulmein and objects from the remote Shan States on the Chinese border. In the centre of the hall are a carved teak steering-chair, such as is used in the boats on the Irrawaddy, a number of gilt poongyi boxes, or chests for sacred manuscripts on scarlet stands, and a very fine specimen of the latter, encrusted with coloured glass, and culminating in a Buddhist shrine.

These exhibits are succeeded by a number of objects in bronze, lacquer, cloisonné enamel and porcelain, many of which were procured from Boxers' houses at the relief of Peking in 1900.

Finally, there is a case containing Græco-Buddhist stone carvings from Gandhara on the North-West Frontier of India.

On the walls in the same order are to be seen first various textiles, including Persian silk and velvet carpets, Indian embroideries, saris, kincobs, &c., then Pathan and Afghan knives, old Mogul armour, damascened shields, matchlock and flintlock guns from the frontier (many of them bearing on the barrels the crest of the Honourable East India Company) and other arms. On the north wall are carved screens and other objects, mostly Indian, two old Burmese and two old Chinese gongs and a pair of fine Tibetan paintings representing Tsong-kha-pa, founder of the Jelupka sect of Lamaism. On the corresponding wall westward are two carved doorways and fragments of railing from a demolished building in the former palace enclosure of Mandalay.

The collection will remain on view for a considerable period, and will be varied or added to from time to time. It may be commended to those who desire a first-hand acquaintance with the still surviving art productions of the East.

Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW;
and 6 Crosby Square, LONDON.

THE THREE LEADING PAPERS OF THE WEST.

THE BRISTOL DAILY MERCURY.

ESTABLISHED 1790.

Recognised as the most up-to-date newspaper
and most influential advertising medium in the
West of England.

THE BRISTOL ECHO.

Six Editions Daily, ½d.

Bristol's most largely circulated and most
popular Evening Paper.

The BRISTOL WEEKLY MERCURY

FIRST ISSUED 1715.

Newsiest and best Weekly Newspaper in the
Western Counties. A great Family Organ, and
a most successful advertising medium.

Proprietors—THE BRISTOL MERCURY, LTD.,
35 Broad St., BRISTOL; 174 Fleet St., LONDON.

THE DERBYSHIRE COURIER

IS THE

Oldest Newspaper in Derbyshire
(Outside the County Town), and is one of the best

Advertising Mediums.

It is and has been for over Seventy years a recognised organ
for the publication of

COUNTY ADVERTISEMENTS,

and its columns are largely used by

PUBLIC AUTHORITIES, by RAILWAY
and OTHER COMPANIES,

And by AUCTIONEERS and SOLICITORS,
for announcements requiring wide publicity.

Offices: HIGH STREET, CHESTERFIELD.

THE

STAFFORDSHIRE ADVERTISER.

ESTABLISHED 1795.

THE PRINCIPAL COUNTY PAPER
IN THE MIDLANDS.

Advertisers will find it the best medium for
reaching superior class of readers over large
area centred by Staffordshire, fifth county in
population and sixth in wealth.

Published at Stafford every Saturday (price 2d.)
by J. & C. MORT, and to be obtained at Euston
and Principal Bookstalls between London,
Liverpool and Manchester.

AUTOMATIC FLOOD TRAP*Murray's Patent, No. 23260.*

THIS GULLY TRAP provides means whereby, in the event of a sudden back flush of water in the drains, the Gully is automatically sealed from the interior and the water in the drains prevented from escaping through the inlet of the Gully.

ADVANTAGES.

Gully can be fixed without touching the drains. The working parts are very simple and cannot get out of order. The Gully can be cleaned out without moving anything. The working parts are made of noncorrosive metal. The trap is self-acting.

Price complete - - 24/-

These journals have the largest circulations, and are the recognised Organs of the Boot and Shoe Trade.

THE

LLANGOLLEN ADVERTISER,

Denbighshire,

Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years, has a very large and influential circulation throughout North Wales. Being conducted entirely on neutral principles, it finds its way into families of all classes. As it is also the only paper printed and published in this district, it offers peculiar advantages to advertisers.

HUGH JONES, Castle Street,
Proprietor.

SOUTH WALES DAILY NEWS.—Pre-eminent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

SOUTH WALES ECHO.—Eight editions daily, 36 columns, 1d. One of the largest and most attractive evening papers in the province. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together.—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

CARDIFF TIMES (Weekly, 1d.)—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2d. to a 1d. paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

# HALL'S Sanitary Washable DISTEMPER

## The Real Sanitary Water Paint.

Hall's Distemper is the real Washable Distemper. It was one of the first invented, and is to-day better than ever, because the Manufacturers have, by reason of many years of scientific and practical tests, continually improved its manufacture until perfection has been attained.

Hall's Distemper is made in two qualities—the inside quality is specially for interior wall decoration, the outside quality being most suitable for all other purposes, both inside and out, whether on wood, stone, brickwork, or any kind of building material.

Its utility for Farm and Estate Buildings, such as dairy and tool-sheds, kennels, barns, shooting boxes, and temporary buildings of all sorts, is remarkable.

Full particulars of Hall's Distemper, in the form of a beautiful booklet, entitled "Modern Development in House Decoration," will be sent post free on application to the Sole Proprietors and Manufacturers,

## PLAN DRAWING.

### ALL ARCHITECTS SHOULD BE INTERESTED.

In all plan drawing the quality of the pencil used is most important. A pencil is now on the market of which the grading is perfect, and absolutely guaranteed; it contains the smoothest and longest lasting lead ever produced.

MADE IN  
17 GRADES.

**VENUS**  
Drawing Pencils.

6B Softest  
to  
9H Hardest.

A GRADE FOR EVERY PURPOSE AND FOR EVERYBODY.

A SAMPLE sent free to all Architects on receipt of request.

Try the pencil, it is a marvel of perfection.

AMERICAN LEAD PENCIL CO., 20 FARRINGDON AVENUE, LONDON, E.C.

ART IN PENCIL MAKING.

AWARDED SILVER MEDAL, SANITARY INSTITUTE, 1902.

## THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

### HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

For Simplicity and Efficiency their Closet stands alone.

Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

### ITS ADVANTAGES ARE:—

1st. The simplicity, strength of the mechanism, and non-liability to get out of order. 2nd. It is self-acting. 3rd. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4th. The large capacity of the containing magazine holding the earth or other deodorising material. 5th. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

PRICE LIST AND FULL PARTICULARS SENT ON APPLICATION TO

THE BRITISH SANITARY COMPANY, 341 BATH LANE (at Charing Cross Station), NORTH STREET, GLASGOW.

### FIRE-RESISTING FLOORS.

Telephone No. 4725 Holborn.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\*\* As great disappointment is frequently expressed at the non appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The plan (if any) selected will be accepted subject to the approval of the Board of Education. YORK.—Sept. 19.—For erection of club-house near York, for the committee of the York Golf Club. Mr. J. Edmund Jones, solicitor, 1 Market Street, York.

MR. PICKERING, chief inspector of mines in India, in his annual report mentions that a theory has been advanced that there is a connection between the earth-tremors which frequently occur in most countries, and the extraordinary fluctuations in the number of accidents from falls of roof in coal mines. Seismologists appear to be agreed that earthquake waves are very shallow surface ripples even when they wreck buildings, but the fact that the passing wave was felt 500 feet underground at Mayo seems to point to the conclusion that a reflex of the surface wave may be produced in certain conditions in extensively worked mines. This would certainly have the effect of unlocking the faults, joints and partings of the strata, and predisposing the roof to fall.

## TENDERS.

### ARUNDEL.

For kerbing, channelling and making-up about 400 square yards of Wood View Road and Ford Road, Arundel. Mr. E. F. FARRINGTON, borough surveyor.

the conditions upon which the overhead wires were sanctioned were such as practically to meet the wishes of the Council and to insure the wires being placed underground at an early date. The works committee of the Deptford Council reports that "the judgment should be of assistance to this Council in insisting upon any such wires being placed underground in this borough, especially in roads fully built upon."

DR. FRASER, medical officer for a large portion and certainly the most mountainous portion of North Wales, holds very strongly that as it would be wrong to prevent a Welsh town such as Cardiff from taking water from Wales, it would be equally wrong to prevent an English town. "In wild Wales," he states, "we are fortunate in having uninhabited mountain land which forms an excellent gathering ground for the immense amount of pure water carried there by the Atlantic breezes. This collecting area is hundreds of square miles in extent, and a small fraction of the rain falling upon it would amply provide for the crowded towns of England, including London, as well as for the people of Wales. Let us in Wales not grudge the 'cup of cold water' to our less fortunate neighbours. What is needed is not restrictions upon sanitary authorities to prevent them from obtaining the necessary supply of water for the people, but an Act of Parliament securing to the people of one country, without distinction of race or district, the first claim upon our lakes and watercourses for a supply of water for drinking and domestic use. At present this right to abstract from a lake or stream even sufficient water to fill an inch pipe for a village supply does not exist unless a special Act be obtained. This proposed right might be limited to a certain proportion of the average flow. By some such means the present monopoly in a necessity of life would be abolished and the public health would be safeguarded."

THE Blackpool Town Council have agreed to the following resolution:—"That the extraordinary inconvenience and public disorder arising from want of adequate accommodation at the post-office prompted the Council to request the Postmaster-General to proceed at the earliest possible moment with the erection of a new post-office."

### ELECTRIC NOTES.

MR. A. A. DAY, of Bolton, has been appointed electrical engineer to the Sunderland Corporation at a commencing salary of 800*l.* per annum.

THE Corporation of Harrogate have decided not to grant running powers to the Wakefield Electric Tramway Company in the borough of Harrogate.

THE profit earned by the electric tramways in the borough of East Ham, London, amounts this year to over 7,000*l.*

THE electric-light undertaking at Cheltenham has not been satisfactory from a financial point for many years, but it is gratifying to announce that for the past year a profit has been earned of over 2,500*l.*

MESSRS. BRUCE PEEBLES & Co., the contractors for the new Llandudno light railway from Deganwy to Llandudno, have now commenced the work, and it is anticipated that the entire line will be in working order within two years.

THE Kashmir Durbar has, it is understood, entered into a contract with Messrs. Abner Dobb & Co., of San Francisco, and Messrs. The General Electric Co., of New York, for the supply of hydraulic and electric plant respectively, required in connection with the scheme for generating power from the Jhelum, near Rampur.

A SCHEME involving an expenditure of 500,000*l.* is being put forward for the construction of aluminium works on an extensive scale at Kinlochleven, on the borders of Inverness-shire and Argyllshire. The place chosen has an abundant supply of cheap water-power, and at an elevation of 1,000 feet above sea-level there is an excellent site for a reservoir. The reservoir will be about 7½ miles in length, with an average width of over half a mile, and when it is completed it will probably have the largest capacity of any artificial reservoir in Europe. It has been calculated that the approximate capacity of the reservoir will be something like 20,000 millions of gallons. The whole undertaking will cost over 500,000*l.*, and the period of construction is estimated at three years.

THE Ameer of Cabul has, according to the *Pioneer*, determined to employ electric power in the factories to be set up at Jabl-us-Siraj, a town which he is practically creating,

but the cost of fuel is so high that the driving of dynamos by steam would involve heavy expenditure. There is, however, an enormous amount of water-power running to waste in the Kohistan, and this is now to be utilised. At Jabl-us-Siraj, apparently, the Panjshehr is sufficiently strong to give all the power that is needed, and the necessary works are being undertaken to utilise this. An electrical engineer has been engaged, and machinery will be erected in due course. It is believed that the arms and ammunition factories will be eventually transferred to the new town, and it is probable that manufacturing industries may be located there as well.

THE annual report issued by the Zürich "Bank for Electrical Enterprises" gives some interesting data as to the actual state and future outlook of the Swiss electro-technical industry. Great progress has been made during the course of 1905. The solution of the problem of the application of electricity to railways has made further progress. In Germany the electrification of the State railways in and near Hamburg has been undertaken, whilst in Switzerland Messrs. Brown, Boveri & Co., Ltd., have introduced electric traction into the Simplon Tunnel at their own expense by way of experiment; the initial difficulties have, it is said, been successfully overcome, and the system is now working well. Several other proposals are made for the electrification of Swiss State and other railways, as well as for the utilisation of waterfall. The prospects for the future are considered encouraging.

THE auditor to Newcastle-on-Tyne Corporation, in referring to the tramways accounts says that the reserve account now stands at 128,173*l.*, and that in the opinion of the manager (Mr. Hatton) it should be 189,127*l.*, or 60,954*l.* more, against which there is a surplus on the revenue account for the past year of 18,704*l.* The auditor suggests that the latter sum should be carried to the reserve account. Reference has, he says, been repeatedly made in the press that it is not necessary to have a reserve and renewals fund, and the friends of municipal trading who argue on those lines—viz. that the whole of the net surplus should be devoted to the relief of the rates or the reduction of fares, &c., and that no such fund is necessary, seeing that the capital is being redeemed—are thereby placing the

undertaking in a false position, and it is only a question of years before this fact will be demonstrated. The statement that no reserve or renewals fund is necessary would be strictly correct if the life of the various parts of the undertaking coincided with the terms of borrowing; but since the life of these various parts of the undertaking is shorter than the periods the loans are granted for, and as the Corporation cannot re-borrow without first redeeming the outstanding loans, then, when these parts are worn out and require renewing, it will be necessary to levy a rate for that purpose."

### "THE VANGUARD."

THE practical philosophy which is expressed in the homely proverb, "A stitch in time saves nine," is peculiarly applicable in dealing with outbreaks of fire. If in each case effective measures could be adopted without delay or hesitation, both life and property would be preserved. Unfortunately, the majority of people are overcome by surprise and terror. The hesitation to act enables the flames to advance, and every second makes it more difficult to subdue the enemy. The "Vanguard Hand Chemical Fire-engine," manufactured by the Yorkshire Fire Appliance Company, is well adapted for use in dangerous emergencies. It is from its form, size and colour easily seen, and from the simplicity of its construction it can be made to operate immediately by the most nervous person. There is no part to become stiff from want of use or to break off when handled by excited assistants. What is also important, it can act at a distance of 40 feet. Captains and superintendents of various fire brigades have declared the "Vanguard" to be the cheapest and best apparatus for first aid in case of fire. As one can be purchased for 25*s.*, and the contents are not affected by lying idle, it will be evident that such a guardian can be obtainable by all classes of householders, as well as by those who possess workshops, factories and warehouses. "Withstand the beginning, after remedies come too late," is advice which should be remembered whenever there is the least possibility of a fire arising, and it should urge all to invest in a "Vanguard."

**SPRINKLERS AND FIRE ALARMS.\***

In ninety-nine cases out of a hundred a fire can be rapidly and easily extinguished if it be attacked within a few minutes of its starting. A large proportion of serious fires takes place during the hours in which the warehouse is closed, or the occupants of the dwelling-house are asleep, and in order to meet these cases numerous automatic devices have been brought forward to cope with fire in its early stages.

It was in 1864 that Major A. Stewart Harrison first introduced the present form of sprinklers, in which easily fusible metal-plugs or attachments are melted by the heat, any serious rise of temperature opening the flow of water-jets or sprinkling arrangements on the walls, ceiling and goods below. These sprinklers, however, have undergone many modifications since then, and many excellent forms now exist, but although adopted in a good many cases they have not achieved any very great measure of success in this country, a result partly due to the apathy of the owners of property, who are always unwilling to incur considerable initial expenditure over and above insurance for security from a chance of destruction of their property, especially as the feeling seems to exist in their minds that they might as well have their goods destroyed by fire as by water, whilst the spread of the fire to other people's premises is no business of theirs.

Sprinklers have been adopted to a far greater extent in America, where over 200 different forms are in use or suggested, whilst in England only some eight modifications of the original idea have been employed.

The importance of time in the early stages of a fire is so great that a vast amount of work and ingenuity has been devoted to devising fire alarms which on any sudden or undue rise of temperature shall draw attention to the fact. Many of the more serious fires that have occurred have started in closed warehouses, and have smouldered and burnt for hours, the smoke escaping up the chimneys so that no attention has been attracted until a tongue of flame has reached a window. Then the glass breaking air enters,

converting the smouldering mass into a raging conflagration when it is too late to do more than limit the area of the fire. It is in cases such as these that the use of good automatic alarms might save enormous loss.

The earliest forms of automatic alarms consisted of thermostats, which were practically delicate thermometers, so arranged that abnormal rise in temperature caused the expanding mercury to make contact between platinum terminals, and so started the ringing of a fire alarm. These, however, frequently failed owing to the surface of the mercury or platinum becoming acted upon and affecting the contact. In order to obviate this trouble, liquids having a cleansing action were introduced above the surface of the mercury to prevent any amalgamation or oxidation and insure contact.

One class of thermostat now in use is based on this principle, whilst a second kind consists of a closed tube containing mercury, above the surface of which in each limb a volatile liquid is confined, one limb being surrounded by an insulating sleeve. The effect of a sudden rise of temperature on this is to cause the vapour to form more rapidly in the uncoated limb, and this driving the mercury down opens a closed electric circuit, and closes a secondary circuit which transmits a signal to any desired spot. A differential thermostat is also used in connection with a second fixed temperature thermostat that remains stationary until a certain temperature is reached, and then has a long range for a small increase of temperature. After the first warning call has been given a further increase in temperature gives a fire call.

A third form of detector consists of a long copper wire stretched horizontally on a metal frame, which expands under the influence of heat to a far less degree than the wire, and causes it to sag in the centre and lower a suspended metal weight into a small mercury cup, thus completing the circuit and giving an alarm.

I do not wish to discuss the relative merits of the various systems, but must point out that in all such systems dependent upon electric currents, it is extremely difficult to insure connections, &c., from getting out of order. Should a fault take place the whole apparatus fails, and constant testing is necessary to make sure that it is in working order. That is just what the owner will not take the

trouble to do. For this reason I think the most valuable suggestion that has been made with regard to automatic fire alarms is to connect up a good indicator with the electric bells of the establishment in such a way that as long as they can be rung the apparatus can be guaranteed in working order. The bells are constantly in use, and any failure at once becomes manifest, and as our own comfort is dependent upon getting it put right at once, it is done, and the alarm kept efficient.

### MANCHESTER SHIP CANAL.

THE engineering department of the Manchester Ship Canal Company successfully completed on Saturday evening the difficult task of laying a 240 ton syphon across the bed of the canal at Frodsham. In order to increase the depth of the water in the canal by 2 feet, as they are empowered to do by their Act of 1904, the company had two courses open to them, namely, dredging or keeping in tidal water to the desired extent. The latter course was decided upon as being the easier and less expensive, but in order that it might be carried out arrangements had to be made for dealing with the Frodsham sewage and the Hoolpool Gutter and draining the low-lying marshlands round about, which would be more subject to floods at high tides under the new conditions. Accordingly Mr. W. H. Hunter, chief engineer to the company, had a two-pipe syphon constructed for carrying this water under the canal into the river Mersey. This syphon is constructed of 6 feet iron pipes, having an inside diameter of 3 feet 6 inches. Two lengths of pipes were strongly bound together and then covered with a coating of cement 5 inches thick, held together by steel wire netting. When completed the syphon was about 180 feet long and weighed 240 tons. To remove it from the wooden frame in which it had been erected at Norton much tackle and 150 men were employed, and it was safely dropped into the waters of the canal under the personal superintendence of Mr. Hunter. This work took three days to do, and on Wednesday afternoon the syphon was towed down to Frodsham Marsh, a distance of 8 miles. The ends, which were sealed, rested upon pontoons, and another pontoon sailed over the centre

supporting it. There was a tug fore and aft. Near the Weaver sluices at Weston Point the syphon went aground, and an hour was occupied in again getting it up. On Thursday the work of placing the syphon in the bed prepared for it at the bottom of the canal was begun, and when partly across the canal the huge mass cracked in the centre. The escapement of air threw up the water of the canal to a considerable height, and the filling of the syphon with water greatly enhanced the difficulty of placing it in position. On Friday a firm of Liverpool "wreckers" were called in to assist, and by seven o'clock on Saturday night the syphon had been duly laid.

Besides doing this work, the Ship Canal Company are contributing 7,500*l.* towards a sewerage scheme for Frodsham, estimated to cost 10,000*l.*, and are also providing the electricity and plant for pumping the sewage to the syphon. The canal is expected to be 2 feet deeper in a week or two.

### THE KINDER RESERVOIR.

THE contractor for the Kinder Waterworks, Mr. A. Kellett, points out that his solicitor, so long ago as August 4, wrote to the Stockport Council stating that "Mr. Kellett personally and myself have never ceased in the demand that the contract works should proceed. It has been pointed out over and over again that Mr. Kellett was ready and willing and desired to proceed. The contract provided for the increase or decrease in the size of the works, and the Corporation engineer, having before him the opinions of Mr. Deacon and Professor Unwin, gave to the contractor, and the contractor accepted, a written order to do additional work pursuant to and covered by the contract. These additional works met the difficulty to which the reports of the engineers had drawn attention, and the contractor was carrying out such works when the waterworks committee intervened, and upon their own responsibility stopped the works and continued the stoppage from October last to the present time, causing enormous damage to the contractor. That stoppage was not because of 'grave responsibilities' imposed on the contractor, but because of 'grave responsibilities' to be faced by the Corporation, and because the Corporation would admittedly have to pay the contractor for such in-

creased and additional works, estimated, I believe, at as much as 200,000*l*. The contractor has never in any manner or form required anything but to carry out his contract, and until he read the statements in the notice of the 2nd inst. he had never heard of or had mentioned to him any suggestion to the contrary—he had not, for the very simple reason that it never existed, it being well known that the one thing the contractor desired was to utilise his plant and materials. By stopping the works all this time and by now breaking the contract and deciding to abandon it, your clients have consulted their own policy and interests, and they must do so at their own risk and expense."

### CITY BRIDGES.

It is shown by the annual accounts of the Bridge House Estates that the receipts from the property administered by the Bridge House Estates committee for the year ending December 31, 1905, amounted to 151,937*l*., and included a sum of 141,569*l*. for rents and quit rents. The expenditure was 128,048*l*., leaving a balance in hand over receipts of 23,889*l*.

The amounts expended on lighting, cleansing and repairing the City's bridges were as follows:—

|                        | Lighting. | Cleansing. | Repairing. |
|------------------------|-----------|------------|------------|
| London Bridge . . .    | 232       | 750        | 76         |
| Blackfriars Bridge . . | 363       | 750        | 1,210      |
| Southwark Bridge . . . | 159       | 815        | 1,044      |
| Tower Bridge . . . . . | 1,287     | 1,400      | 410        |

The following were the total charges in respect of the maintenance of the bridges, the figures including the amounts given above:—London Bridge, 1,325*l*.; Blackfriars Bridge, 2,328*l*.; Southwark Bridge, 2,035*l*.; and Tower Bridge, 14,460*l*. In addition a sum of 2,000*l*. was spent on police services for watching the bridges and 105*l*. in an expert's fee for surveying the bed of the river at all the four bridges for two years. The great difference in the cost of the maintenance of the Tower Bridge over that of the others is accounted for by the fact that the Tower Bridge bascules necessitate the working of expensive machinery, and the consequent

engagement of a large staff of engineers, &c. The resident superintending engineer receives a salary of 315*l*., and the wages of his staff amount to 4,732*l*. A salary of 300*l*. was paid to the bridgmaster, while 1,664*l*. was spent in wages to his staff. In addition, 330*l*. was spent in casual labour. The hire of a steam tug for forty-four weeks to assist vessels past the bridge was responsible for 1,440*l*., coal and coke cost 893*l*., oil and stores 312*l*., supply of hydraulic pressure 60*l*., rent of private telegraph wire and maintenance of telephones 51*l*. and fire and boiler insurance 156*l*.

The City's four bridges, which are lighted by incandescent gas under pressure, are admitted to be the best illuminated bridges in the world, and the Corporation of London is justly proud of the fact that its bridges have been built and maintained since their erection—their maintenance alone amounting last year to 20,150*l*.—entirely out of funds belonging to the Bridge House Estates.

### CHEAP HOUSES.

At the Congress of the Incorporated Sanitary Association which was held in Leith, Mr. R. C. Munro-Ferguson, M.P., Leith Burghs, opened a discussion on rural housing. He said on this subject there was no finality; what satisfied to-day was inadequate for to-morrow, and what was remunerative half or quarter of a century ago was a dead loss now. Our forefathers attained the picturesque in their buildings. We had in many cases attained ugliness by dint of considerable expenditure. We admitted, on the other hand, a welcome degree of light and air. We had a good deal to learn yet in the matter of drainage. The rise of wages especially affected the cost of buildings, and hence the necessity of using cheap material—light and rough—which could be clodded with one kind of protection or another. Far greater discrimination was being exercised in the use of material. If they glanced at the main outlines of the problem, they found that as regarded agricultural housing the existing provision was ample, because land had been unfortunately denuded of population. On the other hand, in the suburbs of populous centres, in villages, in the seaside resorts and in the Highlands, where houses were good

but costly, there was, he thought, a great opening for a cheap house with four or five rooms and up-to-date sanitation. Small holdings would not arise solely under the wand of a landlord; much else was required to make them a success. This, however, he would say, so far as the question of equipment and sanitation was concerned, land could be as cheaply equipped for small holdings as it had been equipped for many of the existing and stately steadings. He thought some permanent sphere for practical experiment was required, and he would like the Government, together with architects, inspectors and others acting in combination, to maintain an experimental establishment where all the new schemes for building and sanitation might be set up, and where prizes might be given for annual distribution. He would commend the suggestion to the notice of members of the Congress, as well as to that of the Local Government Board and the Government. In spending on agricultural land the outlay was often rather in the nature of a rich spiritual experience than of a remunerative return. At any rate, it had yielded no direct return to him, while rents had fallen to about one-third. On the other hand, buildingwork might be done now for about one-half of what it was done for by him twenty or thirty years ago.

Wood, as a material for construction, was singularly neglected in this country. By having double walls lined with sawdust, or with an air space, or with lath and plaster, as warm a house could be provided as one of stone. A house of this kind, with a bath and scullery, 24 feet by 17 feet, cost about 55*l.*; a three-roomed house with outbuildings, 36 feet by 15 feet inside, cost about 100*l.*; a four-roomed house, 125*l.*; a five-roomed house, with bath and scullery, and larder and coal-room, under one roof, 170*l.* The last named was a house he had lately experimented in, and which he let at a rent of 16*l.*, and it was suited to the suburbs, villages, seaside resorts, or small holdings. These economies in material would not admit of provision for sanitation. What was needed for the supervision of such things was a reconstituted Government Board for Scotland, with a practical representative element upon it. Lawyers and experts were saving the country in many ways, but it was rather as advisers than administrators. They must have a practical man as an adminis-

trator, and it was the administrator who was lacking under the whole bureaucratic system of government.

Mr. Robert Lindsay, sanitary inspector, said he was not quite sure any of the local authorities had laid it down as a condition that byres had to be floored with concrete—at least, not so far as Midlothian was concerned—but from personal experience he could say that concrete was the best material that could be used for the creation of a good, healthy, clean atmosphere. A house of two apartments and scullery could be built in Midlothian at 5½*d.* to 6*d.* per 1,000 cubic feet of air space. This was within the earnings of a man with 1*l.* or 25*s.* a week.

Mr. Munro-Ferguson, in answer to a question, said he did not think there was any fear as to the durability of the houses. The roof, he imagined, would be likely to go first. The wood, he explained, was either injected with creosote for people who did not object to the smell, or it was dressed with carbolineum.

### MISTAKES IN WATERPROOFING.\*

WATERPROOF engineering is wholly a modern profession. Its field is the designing of structures to properly receive waterproofing. In the broader sense its mission is the safety and preservation of structures and the conservation of public health. Waterproofing is, itself, practically a modern art. Only in recent years has there been an earnest effort to place it on a scientific basis and deduce any system of practice. Old-school methods are as unfitted for present-day construction as the bridges of twenty years ago are unfitted for the modern locomotive.

The majority of engineers and architects still follow old-school methods, believe that concrete is waterproof—especially if it be reinforced—and give no special attention to the importance of design. A faulty design will invalidate the best methods and materials. This is particularly so in bridgework; if the bridge is not properly designed to receive waterproofing it is almost impossible to make the deck or floor watertight.

CONTRACTORS TO THE LONDON COUNTY COUNCIL

It is a mistake to use a set design or specification for general work. Each condition has its characteristics, and should be carefully considered, especially with reference to the nature of the climate, water, soil, rock, water-pressure, use of the structure and other conditions.

The mistake is always in asking, not how much, but how little waterproofing can be used. Contemplate using but four layers of the usual waterproofing materials in work so important, when no fewer than six or eight should be used. Nothing in construction work pays better than good waterproofing. Insufficient, weak, defective waterproofing is a thousand times worse than no waterproofing. The vital work of rapid transit subway or tunnel waterproofing is as a rule done half-way, with insufficient headroom or other provision for properly installing the waterproofing. The usual cause is that tunnel-owners, through false economy, fail to make the necessary appropriation. At the end of ten years they will regret not having doubly provided for and reinforced the entire waterproofing, bottom, sides and top.

The writer firmly believes that no material should be used for waterproofing which is not elastic. He also as firmly believes that no material should be used for waterproofing which becomes hard or vitreous. These two facts seem so self-evident that they will in time, no doubt, be taken as accepted principles.

There is in all nature no waterproofing which is hard. The writer thinks it a serious mistake, therefore, to attempt to waterproof concrete by hardening the surface or by using thereon a cement-plaster. We know that this method of attempting to waterproof possesses attractive features which appeal to many engineers and architects, but notwithstanding this fact, our personal opinion is that these features are misleading. The writer is a representative of the school of elastic waterproofing as opposed to the school of hard, vitreous or rigid waterproofing. The writer, in expressing, based on tests and general experience, his own opinions—for which, of course, the Society is in no sense responsible—is very sincere in opposing the principle of rigidity in waterproofing, which he thinks is dangerous and will, in its practice, eventually end disastrously. It is not opposition to material but to method.

The fact that the method may have in certain cases

served well for several years misleads one into using it for permanent work. By the very nature of a hard surface, that surface must serve for a while, but also by that very hardness will the waterproof value of the surface be destroyed. Waterproofing is not what it is to-day, but what it is many years hence.

We are told that the hardening process, or the cement-plaster method, must be applied to the inside surface of the wall, where it can be easily reached and the cracks patched. Patching is not perfection. Waterproofing must not crack; if elastic it will not crack. Anyone recommending the application of waterproofing on the interior surface of a foundation wall certainly knows little of the right theory of waterproofing. It is against common sense and the logic of things to place the waterproofing in front (where in time it can be pushed off) of the line of resistance (the wall) instead of behind it. One of the chief uses of waterproofing is to keep water entirely from the wall, instead of allowing it to come to and through it, and by capillarity work up and saturate the entire wall, resulting in the course of years in the hardened cement, or even paint coating on the other side, being pressed off.

Another thing, water should not be fought; it must be led. Waterproofing is part of the general scheme of drainage. Its purpose is to check water, to lead it and direct its flow naturally to some point where it can be disposed of through properly arranged drains. Water will always find the weakest spot in the strongest cement, though it may travel a long way and take a long time to do it. The cement-plaster theory seems to have no bearing whatever on drainage. It means the fighting of water, and from the wrong side of the wall. The hardness of the plaster may keep back water for several years, but it must in time come h rough and the cement come off.

Even though the coating of the cement be placed on the outside of the wall, where it then cannot be readily reached to patch cracks, it will in the majority of cases eventually crack because, being set hard and rigid, it cannot accommodate itself to contraction and expansion. It could not possibly be used on a bridge floor as the vibration would destroy it, nor can it be used on a roof.

It may be possible to make a cement briquette impervious to water, but it is impossible to extend this briquette

into monolithic form and obtain permanently watertight results. A laboratory test of briquettes in this respect, or the test of a specially treated cement box filled with water and remaining watertight, while showing that cement in itself can be made impervious to water, is not, the writer believes, of any real value for practical work, since the conditions are altogether different. Masses of cement are subject to certain climatic changes, shocks, jars, vibrations, settling, expansion and contraction, which will negative any test of the waterproofness of simply the specially treated cement itself in small briquette form. We condemn not a material, but a method, and judge it not by laboratory experiments or exceptional cases where it has served, but from the viewpoint of existing conditions and general work.

We believe that the principle of rigidity in waterproofing goes backward instead of forward. Mastics (composed of asphalt or coal-tar pitch mixed with sand, &c.), are, for example, more yielding for waterproofing than cement coatings. Yet experience shows that almost invariably even mastics will in cold weather crack clear through with any settling or expansion and contraction.

Burlap is frequently incorporated to prevent this very cracking; but experience also plentifully shows that this method—not the material, please note—is not dependable, because cracks will still occur, and the burlap not being waterproof, of course permits the water to pass through. In many cases tar paper is used instead of burlap.

There being in all nature no waterproofing which is hard or rigid, the elastic method of waterproofing seems to be as near a natural waterproofing as it is possible to devise. The elastic waterproofing is not confined to one, but may be composed of many suitable materials. It may be described as follows:—It should resemble a membrane or skin; be, in itself, that is, in one sheet, absolutely impervious to water; be flexible, tough and elastic; be made of materials specially made to withstand the injurious action of water and all underground conditions. As many sheets or layers of this impervious membrane or skin should be cemented or veneered together as the conditions require. This stratum of waterproofing when in place must be independent of, a thing apart from, the surface or structure waterproofed, which may vibrate or settle, twist

or crack, expand and contract, without in the least affecting it, exactly as the hide of a horse or the skin of one's hand is free and independent of the surrounding tissue so that it may readily and naturally yield to every move of the body or the hand. This principle of elasticity, coupled with independence of movement, in waterproofing was termed by the writer some time ago the "Improved Membrane Method," to distinguish it from the old-school process of sticking the waterproofing fast to everything to be waterproofed.

It is a question of method, and, as can be readily observed, is diametrically the opposite of the principle of rigidity in waterproofing, no matter what may be the materials.

A common and serious mistake in the application of waterproofing materials is in attempting to do the work with incompetent and inexperienced men. The average contractor will try to do the work with his own men, usually ordinary labourers, or will sublet it to a roofer, but roofing is not waterproofing. The average roofer thinks he knows how to waterproof, but unless he has many times had the actual experience, he knows really little of good waterproofing. It takes more time and patience than roofing, the method of applying the materials is quite different, and if rightly done should receive much higher pay than roofing, which is ordinarily a very simple and easy operation. Waterproofing, however, especially water-pressure work, requires not alone skilled labour, but frequently considerable engineering skill.

In applying waterproofing, success depends on the perfection of every detail. The best materials imperfectly applied are worthless. The smallest hole caused by a dropped axe, crowbar or other tool, unseen and covered, may, after the pumps are stopped, ruin the entire work.

It is a mistake not to place in charge of the waterproofing an inspector who thoroughly understands such work. It is also a mistake to leave the work to the contractor. The preparation of the surface to be waterproofed so that it be perfectly smooth is important, as is also the careful protection of the waterproofing until it is completed and until the permanent protection is placed upon it. A very serious mistake is in not properly sloping a flat surface to drains since water must be kept moving.

# THE "DRAWWELL" GRATE

WAS PLACED

## First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

They will find it

## RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

**E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.**

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

**TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM.** From the water-colours of JEAN BAES. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable towers and charming turrets, so justly considered of the greatest interest. This work consists of 50 coloured folio plates, difficult to distinguish from the originals, mounted on handsome cardboard and contained in a rich portfolio. Price £4.

**TRAVAUX D'ARCHITECTURE EXECUTÉS EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM.** By HENRY BRYEART, Architect. This work contains the most interesting productions of Henry Beyeart, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in two portfolios. Price complete, £14 8s.

**L'EMULATION.**

A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, heliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

### TRADE NOTES.

MESSRS. OETZMANN & Co., of Hampstead Road, London, have supplied all the furniture for the new play "Toddles" produced at the Duke of York's Theatre.

MESSRS. MELLOWES & Co., LTD., of Sheffield, have secured the contracts for the glazing of the roofs of the following:—Extensions of the works of Messrs. Cammell, Laird & Co., Sheffield; Messrs. Ruston, Proctor & Co., Lincoln; and Messrs. Markham & Co., Chesterfield; also for the swimming-baths in Gibson Street, Sheffield.

### NEW CATALOGUE.

THE catalogue of Messrs. Hartley & Sugden, Ltd., is so well arranged and definite, there is no surprise in the demand for copies. The latest issue preserves the character which gained success for its predecessors. The limitations of the subject are recognised, but within them there is a surprising variety of invention. The notes and articles on heating by low-pressure hot-water and low-pressure steam contain excellent information. Although we have had an almost unprecedented term of hot weather, it would be fallacious to imagine winter will henceforth be deprived of its severity. Prudent people will therefore be acting consistently by considering the pages prepared by Messrs. Hartley & Sugden, Ltd.

THE Gorton District Council are seeking sanction from the Local Government Board for the borrowing of 11,866*l.*, including 8,541*l.* for private street works improvements, and 2,308*l.*, the excess of expenditure in the erection of a new refuse destructor. For the latter 8,861*l.* was originally sanctioned, and the extra expense is in erecting a weigh-house, &c. A scheme of sewage extensions and alterations is also being considered, and sanction to borrow at least 40,000*l.* will be made later, including 10,000*l.* for the purchase of land to effect this scheme. The engineer's scheme for this work has been approved.

## VARIETIES

AN international industrial exhibition is to be held in Amsterdam during the summer of 1908.

THE work of restoration of St. Tudno's Church, Llandudno, is to be shortly commenced.

THE Corporation of Portsmouth have decided to acquire the South Parade Pier. They have also decided to rebuild it at an estimated cost of 60,000*l*.

FOR the purpose of winter entertainments at Torquay it is probable that a handsome pavilion will be erected in the Princess Gardens during the autumn.

AT the General Hospital, Bristol, extensive alterations are to be shortly carried out. The estimated cost is 10,000*l*.

THE thirty-second annual Congress of the Sanitary Association of Scotland was held in Leith. The next congress is to take place in Aberdeen.

A COAL bore has been sunk near Cameronbridge, N.B., to a depth of 4,000 feet. At that distance from the surface the Dunfermline splint coal, a seam of splendid mineral, 8 feet in thickness, has been probed.

A NEW church is about to be erected at Mount Hermon, near Woking, to accommodate 500 people, at the expense of the former vicar, the Rev. W. F. T. Hamilton, vicar of Cromer, in memory of his late wife.

THE Sheffield Board of Guardians have approved a plan for extending the nurses' home on the west side of the hospital, to provide twenty-three additional beds, at an estimated cost of 3,500*l*.

THE Salford Council have resolved that a special committee be appointed to inquire and report on the desirability of establishing a works department to carry out building and other works for the Corporation without the intervention of contractors.

LAND in the county of Buckingham has very considerably increased in value owing to the improved railway facilities offered by the Great Central Railway Company, and all through that district building operations are likely to be very extensive in the coming year.

AN exhibition opens on Saturday next at Newcastle-on-Tyne, and will remain open until October 6. From the list of exhibitors it would seem to be chiefly of a local character. The firms exhibiting are principally connected with the building and engineering trades.

THE public works and buildings committee of the Oldbury District Council report that many of the new houses in the Lightwoods district are being erected with very small living rooms, and they regret that the Council have no statutory powers to prevent the erection of such houses.

THE Bury Town Council have adopted a resolution to the effect that from and after January 1 next proceedings would be taken against any manufacturer allowing the emission of black smoke for more than seven minutes during the hour. At present the period allowed is ten minutes in the hour.

AT Liverpool an inquest was held on September 11 to inquire into the cause of death of Mr. Richard Philip Davies, a paint manufacturer. It seems that during the late hot months an explosion took place at his works, and that Mr. Davies sacrificed his life in an endeavour to save the life of one of his workmen.

THE South Wales steelmakers have decided to form an association, to be known as the South Wales Siemens Steel Association, having for its object the protection of makers' interests and the regulation of trade. Arrangements were made whereby funds will be deposited to place the new association on a proper basis.

PROCEEDINGS have been commenced by Messrs. Shipstone, a large firm of local brewers, seeking for an injunction restraining the Nottingham Corporation from contaminating the plaintiffs' wells by pouring polluted matter into them from Basford Gasworks, and claiming damages. A committee has been appointed by the Corporation to take steps to defend the proceedings.

MESSRS. W. HARLAND & SON, of Merton, have brought out a "Souvenir of the Voyage to India of H.R.H. the Prince and Princess of Wales." It recalls the circumstance that their "Snowwhite" enamel was exclusively used in the decoration of the *Renown* and the *Terrible*, and withstood the action of the hot sun as well as the sea water, besides imparting a festive aspect to the vessels.

THE SCIENCE WING, RADLEY COLLEGE, BERKSHIRE.

CARLE KEMP, NORTH BERWICK.

PARKHEAD DISTRICT LIBRARY, GLASGOW.

PREMISES, SLOANE SQUARE, S.W.

MR. R. H. BICKNELL, an inspector of the Local Government Board, held an inquiry at the municipal offices into an application by the Liverpool City Council for power to borrow 51,500*l.* for the acquisition of the Allerton Hall estate as a burial-ground for the townships of Toxteth Park, Wavertree and Garston. The scheme was strongly opposed by the Widnes Corporation on the ground of its risk of polluting their water supply.

The Bolton Corporation's Hacken sewage works extension was formally opened on the 6th inst. The new works had become necessary very largely as the result of the extension of the borough. The estimated cost of the works was 71,672*l.*, and it is anticipated that the estimate will not be exceeded. The total capital expenditure on the sewage scheme at Hacken and Rhodes Farm amounts to 217,000*l.*, or 1*l.* 4*s.* 5*d.* per head of the population.

The Glasgow Corporation will at their next meeting consider the following motion:—"That it be remitted to a special committee to consider and report on the expediency of instituting in the public interest a works department of the Corporation, which committee shall be charged with the duty of carrying out, where practicable with its own workmen, the work that at present is executed for the Corporation by private contractors."

An official advertisement has appeared intimating that pursuant to the 48th section of the London Building Act, 1904, notice is given that the London County Council did on August 27, 1906, consent to the erection of a building to be known as the Piccadilly hotel, to abut upon Piccadilly, Piccadilly Place, Vine Street and Air Street to a greater

height than that prescribed by the above-mentioned Act. Mr. W. Woodward and Mr. E. A. Gruning are joint architects.

It is proposed to hold an exhibition at the Horticultural Hall, Westminster, from May 24 (Empire Day) to June 8 next year, to bring together the various facilities and commodities connected with and appertaining to travelling and exhibiting the greatly enhanced comforts which are now provided for the traveller, whether on business or pleasure bent. The exhibition will be known as the Travel Exhibition, and a list of patrons and an advisory committee are in course of preparation. The offices of the promoters are at 140 Wardour Street, London, W.

The new water supply for Scunthorpe was inaugurated on the 7th inst. At the pumping station two sets of engines were put down, each capable of pumping 25,000 gallons per hour into the reservoir, with a capacity of 750,000 gallons, which is two miles away on Sawcliffe Hill. The power station, for generating electricity for pumping, is at the gas-house, Scunthorpe, and it is conveyed to the pumps, five miles away, by means of armoured cables. The service reservoir is a covered one, and is 100 feet above the town. The cost of the scheme was 17,013*l.*, and the work has been carried out under the superintendence of Mr. A. M. Cobban, the Council's engineer, whose scheme it is.

The Right Hon. L. V. Harcourt, First Commissioner of Works, visited the Court of Session, Edinburgh, on the 7th inst., and inspected the building with the view of considering the proposals which have been made for improving the accommodation of the Law Courts. The scheme has been prepared by Mr. W. T. Oldrieve, of the Office of Works, and includes, it is understood, the setting back of the building to the south on the open space next the Cowgate, the enlargement of the five outer house courts, the provision of waiting and retiring-rooms for witnesses, rooms for officials and improved restaurant accommodation.

The Birmingham lodge of Operative Stone Masons recently announced the intention of withdrawing from the Birmingham Trades Council in consequence of internal disagreements. The secretary has consequently been instructed to write to the Stonemasons Society expressing regret at their withdrawal from the Trades Council, and

London Offices & Showrooms: 2 & 3 NORFOLK ST., STRAND, W.C.

requesting them to reconsider their decision, believing that it would be better both for the stonemasons and the Trades Council that they should work jointly for the furtherance of trades unionism in Birmingham. A deputation is also to be appointed.

THE Liverpool City Council have sold for 70,000*l.* the fee simple in the northern portion of the George's Dock site, situate on the north-west side of Water Street continuation and south side of St. Nicholas Place, containing about 6,807 square yards, to the Royal Liver Friendly Society. The total area of the land in question is 6,807 square yards, but the net amount available for building upon is not more than 5,880 yards. The price over all for the net building land works out at 11*l.* 18*s.* 1*d.* against 11*l.* 8*s.* 6*d.* paid by the Council when they purchased the site for street improvement purposes. The building to be erected by the Society is expected to cost 300,000*l.*

SURVEYS and borings are in progress for the location of a great bridge across the St. Lawrence river at Montreal, Canada, which is to be built by the Montreal Bridge and Terminal Co., and with the terminal building to be erected in connection with it involves an estimated expenditure of 12,000,000 dols. The structure will provide for several railroad and trolley tracks, highways and sidewalks, and will have a 1,500-foot cantilever span at a clear height of 150 feet over the channel, besides shorter spans and about 1½ miles of steel approaches. The river at the point where the bridge is to be located is 30 feet deep, with a very swift current, and is yearly obstructed by enormous fields of ice. The substructure will involve at least two piers that will have to be built in some type of pneumatic caissons. Mr. F. Stuart Williamson, of New York, and Mr. F. W. Fox, of London, are the associated engineers for the company that is forwarding the project.

THE United States Department of Commerce in a report make a comparison between the imports and exports of steel and iron from the three leading iron countries—Great Britain, the United States and Germany—for the first four or five months of this year. The figures relate to pig-iron, semi-finished steel and finished material, but do not include ore and machinery. From Great Britain in the first five months of 1906 the total exports, amounting to 1,732,513

gross tons, show an increase of 307,900 tons over the corresponding period of 1905, while imports, which totalled 633,677 tons, show an increase of 82,928 tons. Germany, in the first four months of the year, exported 1,214,109 metric tons, which gives an increase of 251,183, and her imports of 146,117 tons show an increase of 43,959 tons. In the same period the United States exported 474,031 gross tons, or an increase of 154,419 tons, and imported 165,429 tons, an increase of 67,314 tons.

A HOUSING scheme for Ryhope and Tunstall, two mining villages near Sunderland, has been passed by the local District Council, the cost of which is estimated at 20,000*l.* The new houses will cover an area of two acres in each village, and the scheme will be self-supporting. In all, there will be 96 dwellings, which will be separated into 12 blocks of eight each, to accommodate 528 persons. Each block will provide for 10 families, and will comprise respectively four self-contained houses with one living-room, three bedrooms, scullery and bath, &c., each letting at a rent, including rates, of 5*s.* 9*d.* a week; two self-contained houses with one living-room, two bedrooms, scullery, bath, &c., each letting, inclusive of rates, for 4*s.* 9*d.* a week; two flats containing one living-room, two bedrooms, scullery, bath, &c., at a rent, also including rates, of 4*s.* 3*d.* a week; two flats of one living-room, one bedroom, scullery, bath, &c., letting, including rates, for 3*s.* 9*d.* a week. Each house will be provided with water carriage and garden space.

An arbitration case between the Woolwich Borough Council and the Postmaster-General with regard to the construction of overhead telegraph wires was recently decided. The Woolwich Council contended for underground instead of overhead wires in certain roads in the borough, a claim which the Postmaster-General rejected. The judgment provides:—"That upon twenty-four responsible persons becoming bona-fide subscribers entitled to the use of the telegraphs aforesaid the Postmaster-General shall cause all the telegraph wires and poles aforesaid to be removed and the telegraphs to be placed and maintained underground throughout the streets and roads aforesaid." In a letter to the other councils announcing the decision the town clerk of Woolwich says that, although his Council was not successful in obtaining underground wires along the roads referred to in the case submitted for arbitration,

## Important Notice to the Architects and Civil Engineers of Westminster.

As Westminster has become one of the most important centres of the professions of Architecture and Civil Engineering, arrangements have been made by Messrs. GILBERT WOOD & CO., Ltd., to establish Branch Offices in that district at 43 OLD QUEEN STREET, S.W., Messrs. W. HAY FIELDING & CO. becoming the representatives for all business purposes.

The Birmingham Offices are at 102 COLMORE ROW.

### AGENTS FOR THE COLONIES.

MESSRS. GORDON & GOTCH,

Melbourne, Sydney, Brisbane, and Perth, Australia; Wellington, Christchurch, and Auckland, New Zealand; Launceston and Hobart, Tasmania.

SOUTH AFRICA—Central News Agency, Ltd.

Telephone No. 4725 Holborn.

### NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

### EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

### TENDERS, ETC.

\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

### COMPETITIONS OPEN.

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The plan (if any) selected will be accepted subject to the approval of the Board of Education. Particulars can be obtained on application to the Secretary, at the County Education Office, 57 London Street, Norwich.

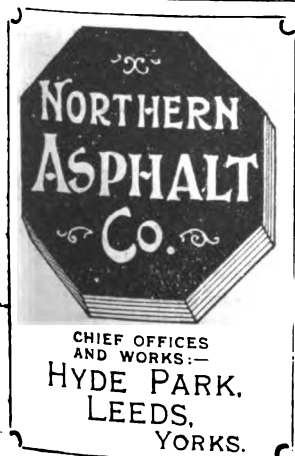

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new founding hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212/ each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

In the Dundee Sheriff's Court an interesting action has been raised by D. Walker, president of the Aberdeen Master Painters' Association, and the members of the organisation, against John W. Forrest, painter, Union Grove. The sum sued for is 28*l.* 12*s.* 5*d.*, which is alleged to be due under a scheme devised by the Association with the view of recouping the members for any expenses they incur in connection with the preparation of tenders. A provision was made that each member when estimating should add 5*l.* per cent, which was to be handed over to the Association, and in this connection defender was said to be owing a balance of 28*l.* 12*s.* 5*d.* The defence is that the pursuers have no title to sue, and that the action is incompetent in respect that the Association is a trade union, and that the deed of declaration founded on is an agreement which cannot be enforced.

**ELECTRIC NOTES.**

THE War Office have decided to establish an electric-power installation at the mechanical transport workshops at the depot, Aldershot, and have arranged contracts.

An engineer at the Warrington Corporation electric station, named George Platt, received a shock on Monday from one of the generators to the extent of 6,000 volts. When picked up he was found to have been badly burned.

In consequence of the development of electrical apparatus in ships the Admiralty have decided to increase the number of electricians borne, a reduction of able seamen corresponding to the additional numbers of electricians being made in each case.

THE South Shields Town Council at a special meeting adopted after much discussion the recommendation of the electrical committee to increase the salary of Mr. Cawthra, electrical engineer, from 500*l.* to 550*l.* per year, rising by annual increments till a maximum of 700*l.* was reached.

THE electricity committee of the Manchester Corporation are considering a scheme for the extension of the generating plant. If the present rate of increase in the demand for electricity is maintained the maximum limit of supply will be reached by the end of next year. There are three generating stations.

THE Brush Electrical Engineering Company, Ltd., of Loughborough, have entered into a contract to supply 190 single-deck electric trolley cars for St. Petersburg, and the construction of them is to be pushed forward with the utmost expedition. The order proceeds from an American and Continental group established expressly for the purpose of exploiting Russia in the field of engineering.

ARISING out of the tramway accident at Swindon on the occasion of the holding of the Bath and West and Southern Counties Agricultural Show, by which five passengers were killed and many seriously injured, claims for compensation to the amount of 30,000*l.* have been made against the local Corporation. Unless the claims are considerably abated the chairman of the tramways committee stated that the matter would be fought out in the law courts.

THE Krugersdorp Town Council have adopted an electric-lighting scheme which will involve an expenditure

SCHOOL OF ART, HULL.

PORTLAND ROAD COUNCIL SCHOOLS, HOVE, SUSSEX.

of 15,547*l.* The scheme provides for a three-wire continuous current plant. Most of the wires will be underground, and only light wires placed overhead. A private consumer will have to pay 1*s.* per unit, and for the lighting of the town the ratepayers will pay 6*d.* per unit. As soon as the sanction of the Government is received tenders will be invited, and the matter proceeded with without delay.

THE King's Norton District Council have agreed to terms with the Birmingham Corporation for the supply of electrical energy in connection with the Moseley and King's Heath tramways. The Council are to take from them a high-extension supply of current at the price of one penny per unit, without any limitation as to the minimum consumption or the period of supply of the current. The necessary works will require an outlay of 6,000*l.*, and it was decided to borrow 40,000*l.* from the Ecclesiastical Commissioners at the rate of 3*l.* 15*s.* per cent. for the carrying out of the tramway order.

A RETURN issued on the 17th inst. shows that the length of railway line in England in equivalent of single track which was worked at the end of last year solely by electricity was 140½ miles, while that worked partly by electricity was 170½ miles. The number of miles run by electrical trains in 1905 was 9,667,429. The total quantity of electrical energy used for electrical train running and other purposes was 100,977,467 Board of Trade units. The first-class passengers showed an increase of 38,000*l.*, second-class a decrease of 211,000*l.*, third-class an increase of 247,000*l.*, and season-ticket holders an increase of 141,000*l.* Minerals showed an increase during the year of 601,000*l.*, and general merchandise of 435,000*l.* The receipts from the carriage of live stock decreased by 24,000*l.*, following on decreases of 66,000*l.* in 1904 and 5,000*l.* in 1903.

**Section Books & Stock Lists on Application**

THE sanction of the Board of Trade has now been received to the borrowing of the sum of 40,000*l.* by the King's Norton District Council for the purposes of the reconstruction of the Moseley and King's Heath tramways and the construction of the extension to Alcester Lanes End, such sum to be repaid within a period of twenty-seven years. The Worcestershire County Council have stated that they will have no objection to the tramway track being paved throughout with hard wood blocks, provided the District Council undertake, by agreement in writing, to sand the track whenever it may be necessary for the safety of the public, and to indemnify the County Council against any action, costs or liability which may arise in consequence of the laying of such wood paving.

THE tramways committee of the Manchester Town Council say, concerning the loss arising in the Tramways Parcels Department, that the accounts show that the total operating expenses amounted last year to 17,366*l.*, and the interest on the sinking fund, on outlay and interest to floating stocks to 400*l.* The income from the carriage of parcels was 11,996*l.*, leaving a deficit of 5,770*l.* The committee have had to undertake large expenditure in the provision of vans, horses, baskets, bags and the other paraphernalia connected with the business of carriers. New stock of this kind has been purchased at large expense, and parcels depôts have had to be rented. Litigation has also been costly. The work of the parcels department has been handicapped through the fact that incoming parcels for delivery have not been received in so large numbers as parcels for despatch to different parts of the city or out of Manchester.

THE new generating station in Portsmouth Dockyard, which is to supply electric current for the whole of the establishment, and eventually Whale Island and the Naval Barracks as well, was formally opened by Rear-Admiral Sir H. D. Barry on the 15th inst. The station is fitted with Belliss & Morcom's triple-expansion engines, running at 250 revolutions, directly coupled to Dick, Kerr & Co.'s multipolar generators. There are six sets in all—five of 600 kilowatts and one of 300 kilowatts. Each engine is coupled with a separate Allen's condenser and is run quite independently of the others. The condensed water is discharged

into a hot well and is pumped by Worthington's pumps, directly connected by electric motors, to the top of the boiler-house, where it is discharged into the main feed tanks after passing through various filters. The steam-raising plant consists of ten boilers by Danks & Co., fitted with Bennis's mechanical stokers. There are also two superheaters, by McPhail & Simpson, through which the steam passes after leaving the boilers. The main switchboard consists of six machine panels, twelve lightning-feeder panels and twenty power-feeder panels, besides two balancing panels and one third-wire earthing panel. All the regulation of the generating station is controlled from this main board. In addition there are six panels for supplying current to the various power and lighting circuits in the generating station. In the station is constructed a powerful overhead crane. It is electrically driven in every movement and is capable of lifting 25 tons.

### BUILDING AND BUILDERS.

At a meeting of Glasgow Dean of Guild Court on the 13th inst. new "linings" or building plans of a total value of 39,680*l.* were granted.

THE Hythe Town Council have decided that they will not provide artisans' dwellings under the Housing of the Working Classes Act, as they do not consider necessity demands them.

THE Manchester education committee recommend the City Council to apply to the Local Government Board for sanction to borrow 8,600*l.* to cover the cost of the Abbott Street Municipal school, and 17,800*l.* to cover the cost of erecting the Domett Street Municipal school.

THE National Association of Master House-painters and Decorators of England and Wales (Mr. John H. Turner, president) will hold their thirteenth annual convention and exhibition of decorative art and manufactures in the drill hall, Denton Street, Leeds, from October 9 to 15 inclusive. It will be opened by Lord Allerton.

THE Strand Board of Guardians recently invited tenders for repairs, painting, &c., of the workhouse at Edmonton. Fourteen tenders have been sent in, the amounts ranging

## THE LEEDS FIRECLAY COMPANY, LTD.

London Offices & Showrooms: 2 & 3 NORFOLK ST., STRAND, W.C.

from 945/ to 297/. The latter has been accepted. The disparity in the amounts occasioned some comment.

A SUB-COMMITTEE of the Coventry Town Council have been instructed to consider the following motion and report in six weeks:—"That the resolution respecting the insertion of the fair-wage clause in building contracts passed on October 23, 1905, be amended to read as follows:—"That in future all contracts for work entered into by the Corporation shall contain a clause providing that the contractor shall pay the standard rate of wages and observe the working rules agreed upon by the trades unions and employers in this district; that no sub-contracting be allowed; and, further, that all goods required by the Corporation shall be purchased from those firms which pay the standard rate of wages and observe the working rules agreed upon by the trades unions and employers in the district in which such firms may be situated."

### TRADE NOTES.

WE desire to call the attention of our readers to the letter in another column from the secretary of Waring & Gillow, Ltd. The question at issue between the company and a journal, or journals, is one for the courts, and we cannot comment on it. But it is allowable to say that everyone who has had business relations with the company must consider that any statement concerning the financial weakness of Waring & Gillow, Ltd., is an absurdity. We have high authority for the belief that a good name is the immediate jewel of our souls. In affairs of trade the good name has a financial basis, and to deprive any firm of such a jewel without irrefutable evidence may cause serious injury, although no gain may arise to the slanderer.

THE Marmor Company inform us that they are very busy at the present time, having received several large orders

for their marbles, including an important shipment to New Zealand.

MESSRS. E. H. SHORLAND & BROTHER, of Manchester, have just supplied their double-fronted patent Manchester stoves with descending smoke flues to the Hospital for Skin Diseases, Manchester.

A PARTICULARLY good drawing pencil has just been placed upon the market by the American Pencil Company, of 20 Farringdon Avenue, London, E.C.—in fact, the best we have yet found. It is absolutely free from grit, and another important item is that it will not easily break. Samples are sent on application.

MESSRS. T. T. GETHING & Co., of 201 and 202 Warwick Road, Kensington, W., have purchased the business, stock, plant, &c., from the executors of the late Mr. T. P. Lilly, Chilmark Stone Quarries, Wiltshire. The stone is of the hard Portland series, and has been used for many large public buildings throughout the country.

OWING to the lamented death of Mr. C. Backhoffner, the London agent for Marsden Tiles, Ltd., a new agent has had to be appointed. The firm have been fortunate enough to secure the services of Mr. H. Moorcroft, who is well known in the tile trade and was a contributor to Mr. W. J. Furnival's recent work on "Tiles and Faience." Mr. Moorcroft is a member of the Society of Arts.

DANGER of fire and the use of fire appliances and alarms are receiving the careful attention of architects, civil engineers and all engaged in building operations. The new meal warehouse just recently erected for Messrs. Spratts Patent, Ltd., at Poplar, is to be protected by the use of sprinklers. Messrs. George Mills & Co., of Radcliffe, near Manchester, have received the order for a complete set of their modified Titan sprinklers. The same firm have received an order for the supply of a new pump for boiler-feeding purposes for the Sun Mill Co., Ltd., of Oldham. The pump will be of the fly-wheel type, with outside packed rams, having 7-inch steam cylinders, 4-inch rams and 9-inch stroke.

## VARIETIES.

At the meeting of the Edmonton District Council it was stated that there were upwards of 1,000 empty houses in the district at the present time.

A COMPANY has been formed, entitled the Wembley Park Estate Company, with the object of developing Wembley Park as a building estate.

THE will has been proved of Mr. John Fyfe, D.L., J.P., of Beechgrove, Aberdeen, granite merchant. His personal estate is returned at 235,732/. He was the owner of a large estate at Brixton producing over 9,000/. per annum.

THE Local Government Board are to be asked to sanction one Parish Council for the Hertfordshire Garden City, which, being in the parishes of Letchworth, Willian and Norton, is at present under the jurisdiction of three.

THE Minister of Public Instruction at the next meeting of the Spanish Council of Ministers will present a draft Bill for the creation of 5,000 primary schools within a period of five years.

MR. W. BEDDOE REES, architect, Cardiff, has been successful in the competition for the new English-Presbyterian church to be erected in Wrexham. This is the third competition he has recently secured for churches in the last two months.

IN its customary return on the state of the labour market, the *Board of Trade Labour Gazette* says:—As is not unusual, employment during August was not quite so good on the whole as in July; on the other hand, the building trades showed some recovery, and were better than last year.

THE Walsall Town Council on Monday adopted a recommendation of the general purposes committee that the reconstruction of the old tramway track in the borough be carried out by workmen employed by the tramways department, under the supervision of the Corporation officials. The expenditure involved is about 40,000/.

A LOCAL GOVERNMENT BOARD inquiry was held on the 14th inst. into an application by the Oldham Town Council to borrow 2,248/, which they have already spent beyond the estimate on the Lowermoor baths. It was explained that the baths were to cost 9,033/, but they had cost instead 2,248/ more than this, and the amount had been borrowed from the bank. There was considerable opposition.

A LARGELY attended meeting was held on Wednesday in the Potteries, Staffordshire, of manufacturers in the tile and china industries. Mr. Cecil Wedgwood presided. It was decided to call the attention of the Board of Trade to the excessive charges made by the railway companies for the carriage of pottery.

SCHEMES are on foot for the erection of a new concert-hall in Great Portland Street, London. Messrs. Perry Bros., of Finsbury Square, will be the builders, and the Columbian Fireproofing Company, Ltd., 37 King William Street, E.C., will construct the concrete floors. The structure is estimated to cost 60,000/.

AN estate at Rhos-on-Sea, one of the suburbs of Colwyn Bay, will be put up to auction on the 24th inst. The whole estate, with its two miles of open sea frontage, has been in the hands of a single owner, who during the past twelve years, it is said, has spent over 90,000/. in its development. Altogether there are forty-two lots, including sites of marine residences, three compact separate estates and the Rhos-on-Sea golf links of 150 acres.

FIFTY actions for damages were instituted against the Basingstoke Borough Council as a result of the late typhoid epidemic, the cause of which was traced to the town water supply, the damages claimed aggregating nearly 4,300/. A committee of the claimants recently met the committee of the Ratepayers' Association, with the result that the Council have agreed to pay 1,670/. 15s. in settlement of the fifty actions, without prejudice and with denial of liability.

THE Yarmouth Corporation is considering a scheme for extending the harbour accommodation by the provision of a basin which would have an area of nearly ten acres, and accommodate 250 fishing boats. There would be 3,000 feet of quayage, at which 134 boats could land herrings at one time. The cost of this extension would be 73,000/., and it would necessitate changes which have aroused considerable opposition.

THE coming month's issue of the *Pall Mall Magazine* contains a very interesting article by Mr. Edgcumbe Stanley on the Victoria and Albert Museum, the latest work of Sir Aston Webb, R.A. The particulars of the sculpture, and also of the sculptors engaged on the statues, of which there

will be no less than twenty-two royal and symbolical figures, ten painters, ten craftsmen, six architects and six sculptors, will be of undoubted interest to all engaged in architecture and building.

JUDGE MOSS travelled to Bethesda on Saturday to personally investigate the work offered by the North Wales Quarries to a labourer who sued them for compensation. The work was to unsling waggons and push them. Claiming that he had practically lost the use of one arm, the man contended he was unable to perform that kind of work, especially in an exposed place. At the quarry the Judge pushed the trucks himself, first with one hand and then with both. In the afternoon at the Bangor County Court his Honour held that the work offered was unsuitable for applicant, whom he awarded 9s. a week compensation.

MR. M. K. NORTH, Local Government Board inspector, recently conducted an inquiry with reference to a request by the Colwyn Bay Urban Council for power to borrow 17,000*l.* for the extension of the gas undertaking. The works include the construction of a siding to the works from the London and North-Western Railway, a coal store with a capacity of 1,000 tons, a coal breaker, a coal elevator and a coal conveyer. It is also proposed to increase the dimensions of the governor-house, to add to the purification plant and to lay down a new weighbridge.

THE Wakefield medical officer (Dr. Gibson) has presented a report to the sanitary committee of the Corporation in respect to the condition of the river Calder. He states that the river reaches the city boundary in an excessively foul state, and that all along the river above Wakefield wholesale pollution is taking place. On the other hand, he is able to show that very little pollution of the river takes place from sources within the city. The river is black, turbid and foul, and fully deserves the appellation of an open sewer. He is of opinion that the state of the river is likely to be injurious to the public health.

THE South Bank Baptist church was opened on Wednesday, September 19. The portion of the scheme which has been erected is the church premises complete, with the exception of the upper part of the tower. Large schools are provided for in the future. The buildings are designed in

Late Gothic, buff terra-cotta being used for the dressings in connection with red brick facings. The contract, which has been carried out by Messrs. Bastiman Bros., of Middlesbrough, was 3,234*l.*, and the accommodation of the building 616 persons. The architects are Messrs. George Baines & Son, 5 Clement's Inn, Strand, London, W.C.

A BOARD OF TRADE inquiry was held at Newbiggin regarding an application by the Urban Council for an order to prohibit the removal of any shingle or ballast from the shore or banks of the sea adjacent to the Newbiggin urban district. The Commissioner explained that the Board of Trade had power to prohibit the removal of sand, not only from the foreshore under their own jurisdiction, up to high-water mark, but from the banks and above high-water mark as well. In some cases the Board issued orders of this description for some hundreds of feet, in fact, hundreds of yards, above the high-water mark, though it might be private property belonging to the lord of the manor. These orders were very stringent. They were absolute, and overrode all other Acts and powers.

At the last meeting of the Heywood Town Council a discussion took place on the proposal of the Heywood and Middleton water board to apply to Parliament for powers to borrow 125,000*l.* for the purposes of the water undertaking and for the completion of the new reservoir on Ashworth Moor. It was pointed out that the reservoir had cost much more than was estimated because of the difficulty of getting a good foundation for the embankments, &c.; but it was urged that it was absolutely necessary to complete the work now that it had gone so far. The expenditure has already been about 165,000*l.* On the other hand, it was contended that if it had been known that the reservoir would have cost so much the scheme would not have been allowed to go forward. The scheme had been enlarged from time to time until it had reached its present size. Two members of the Council were appointed members of the Board.

A CONFERENCE consisting of His Excellency the Commander-in-Chief of India and other high officials, assisted by the Electrical Adviser to the Government of India, has been held at Simla to examine the question of the supply of electric power to cantonments in Upper India. It is not

known what the views of the conference or of the Government are on the subject of the agency to be employed for this purpose, but, says *Indian Engineering*, it is to be trusted that private firms will be employed and that it is not intended that Government should provide its own installations. Government may rest assured that the supply of power from its own installations will not be cheaper than that from a private installation, no matter what estimates and forecasts prepared by its own officers may indicate. Besides, it has to be remembered that there is a great future for electrical undertakings in India and there will be no lack of private firms to come forward if Government will only encourage such undertakings by the grant of liberal terms. This policy may not be a paying one at the outset, and on that account may not find favour with Government, but we are convinced that a policy characterised with liberality will, and must, prove to be very profitable to Government in the long run.

A COMPLETE drainage scheme for the burgh of Ayr, which has been proceeding for the past ten years, has been practically finished at a cost of 90,000*l*. The entire work, including the concentration of the sewage, formerly discharged through nine outfalls on the beach, and its conveyance a considerable distance out to sea through two outfalls, was designed and has been carried out by Mr. John Eaglesham, C.E., Ayr, who was burgh surveyor when the scheme was inaugurated. There have been laid down in all thirty-two miles of main and outfall sewers, varying in size from 9 inches to 48 inches diameter, much of it being built of brick 48 inches diameter. The outfall sewer for the south side of the river is of 42 inches diameter cast-iron pipe, and it is carried on iron saddles resting on iron screw piles out to sea opposite the gasworks, 468 yards beyond the esplanade wall which rises from the beach, and 323 yards out from low-water mark of spring tides, the depth of water at the outfall being 21 feet. The main outfall for the division of the burgh on the north side of the river is 24 inches diameter, and is laid on a rocky foreshore, discharging at the Euchar Rocks at low water.

A hydro-electric generating station has recently been completed on the north fork of the San Joaquin river in the Sierra Nevada mountains, fifty miles north-east of Fresno, California, by the San Joaquin Light and Power Company.

The conduit supplying water for the operation of the equipment of the station has a total length of 4.3 miles, and comprises open canal, tunnels, flumes and a pipe line. These structures are designed for a flow of 100 cubic feet per second, and, with the total available head of 400 feet, produce a total capacity of 3,600 horse-power. The canal portions of the conduit are 5 feet wide and 3 feet deep, and are lined throughout with concrete. The intake basin of the conduit and the forebay at the power-house are built of concrete. The tunnels of the conduit are also lined with concrete. The flumes are built of one-eighth inch steel plates and are semicircular, with a width of 6 feet. The pipe line is 3,000 feet long and 52 inches in diameter, the thickness of the steel plates of which it is built varying from three-sixteenths to half an inch. The station contains two tangential-type water-wheels, each of which drives a standard Allis-Chalmers water-wheel type, 1,000-kw., 550-volt, 3-phase electric generator operating at 300 revolutions per minute. Two 62½-kw. direct-connecting exciters are provided.

A PIECE of engineering that is just now creating much attention in Paris, says the *Philadelphia Public Ledger*, is the construction of what may be described as an immense iron boat, the keel of which rests in a trench which has been hollowed out all along the Boulevard St. André. It has to do with the building of the new station Place St. Michel, on the Metropolitan Railway, and forms part of the caisson which will be slipped from the trench into the Seine, and in which the new station will eventually be installed. The boat is about 198 feet long, and when its arches are united its height will be 49 feet. In sinking the caisson more excavation will be necessary, and this will be carried out by means of compressed air until it gradually disappears under the embankment which will cover it. When complete the caisson will lie at a depth of about 69 feet below the Place St. Michel, between two ordinary tunnels, to each section of which it will be joined by a special elliptical caisson. Access to the new station premises will be by an elevator, as in the case of the London "tubes." The special elliptical caisson in front of the present erection on the Place St. Michel is to be begun immediately, and the other one on the Place St. André des Arts will be uniform with it. The section of the tunnel which is between the

arm of the Seine and the Place St. Michel caissons passes under the Orleans Railway, and will be constructed of masonry in the ordinary way. To protect it against infiltrations and subsidences caused by the weight of the trains suspended above, however, all soil surrounding the tunnel excavation will be stiffened by a special process. This will consist either of the circulation of a refrigerating liquid in a series of tubes or of compressed gas, the expansion of which produces a considerable reduction of the temperature.

### CARVING FINIALS.

An interesting article, "A Reminiscence and a Reverie," has been contributed by Mr. G. W. Milburn, sculptor, York, to the *Yorkshire Herald*. He says:—

It is quite impossible for anyone who has not been used to carving up at a great height from the ground to properly understand and appreciate the exquisite feelings and sensations of freedom and freshness of fancy—that even the birds of the air are more companionable, less timorous and frightened and even inquisitive, similar to the penguins in the South Polar regions, which used to come quite close to Captain Scott and his companions when they were together on the ice.

When you are carving upon a scaffold, strong and high, the danger does not appeal so strongly to you, but the feeling of caution seems to be always present. For instance, one of the carvers was singing:—

I know Thou wilt not slight my call,  
O Thou Who marks the sparrow's fall.

Whilst another carver spoke to the man oiling the Early English finial of the small octagonal spire on the west side of the south front of York Minster, "Do take care that you do not fall," and added, "Some years ago I was carving on the front of the new buildings of the London University, Vigo Street, London. I put my hand upon a piece of wood at an angle between the stone jambs of the upper windows 50 feet from the ground. The piece of wood gave way and I fell upon a stack of bricks. When they picked me up they thought I was dead. They carried me to Charing Cross Hospital. However, after being in the hospital for six weeks I came out apparently well except a tooth knocked

out of the front of my mouth, my wrist slightly twisted. When I was leaving the hospital the kind old doctor patted me gently upon my shoulder, looked steadily into my eyes, and told me to be very careful and never, if possible, get excited."

The strange part of him telling about his fall follows. A week after an excursion train was advertised from York to London, leaving York at 1 A.M. He went to the York railway station at 1 P.M. They told him the train had gone early in the morning. He came away sad and low-spirited. He said, "I am going to London to-day." I asked if he had any prospects of work when he got there. "No," he replied, "but I feel compelled to go to see my mother and my favourite throstle my mother is taking care of for me." He arrived at his mother's house that night to find that she had died, and ever after he used to take his favourite throstle about with him, and when the throstle died he gradually pined away.

The Early English finial referred to was fixed in position on top of one of the small octagonal spires which terminate the stone buttress, square on plan at the base, near the steps leading to the entrance to the south transept of York Cathedral. This particular finial is the second on the west side, south front, and about 85 feet from the ground, and next to the central gable which contains the very beautiful circular and marigold window. The venerable Dean, with his reverential feeling for the glorious old Minster and splendid results of the skilful builders of the past, must feel gratified to see the work so far accomplished—the tall and graceful pinnacles, richly carved crockets and quaint grotesques projecting at the intersection of the angles; the perforated tracery panels forming parapet of the towers, carved string-mould slightly projecting on the top member for variety; the arch of the belfry window moulded, and the graceful ogee line enriched with crockets and carved label terminations to arch and simple tracery—to the window where the bells are located. And the music? How it fills the air with melody. And the big bell Peter, tolled at mid-day, seems to tremble with fine and sensitive reverberations like one great wave of sympathy.

While the sun shines and lights up some portions and makes the higher projections sparkle like diamonds, others

seem to nestle in the soft and silent shadows, which emphasise the exquisite beauty of the whole building. The two towers, with their strong and delicate lines, have the effect of the holy Apostles, Peter and John, at the gate of the beautiful Temple inviting worshippers and guarding the sacred precincts of love and majesty, suggesting devout thoughts and aspirations to those who enter the Garden of the Lord, where the throbbing and tired temples of the soul seek rest and peace and consolation as they commune there in silence, like the "weary hart that panteth after the fount of many waters," retreat from care and turmoil, where the passionate longings are soothed and tinged so tenderly with joy and gladness, where impatience and desire, companions of the just, are linked together with love and hope, where grace and silence soothe those in tribulation.

How pure and beautiful is the sky with its rich and varied tints and delicious colouring, always moving and changing from grey to blue, blue to purple, purple to red and gold, which has already received the royal patent of the Creator, and in contrast to the city below, with its red-roofed houses where sorrow and death enter, making the dwellings sad and desolate—as the swallows flit across the horizon, and the white butterflies flutter in the bright sunshine like silent messengers of God.

Or perhaps a wounded carrier pigeon comes with a message attached to it from a beleaguered city and rests in security upon the head or shoulders of one of the old stone figures under a richly carved and moulded canopy; or perchance a blue-black jackdaw perches upon the time-worn and weather-beaten quaint wing of a projecting grotesque animal, the bird contemplating the varied surroundings with its don't-care audacity and cunning, with its talent for imitating the voice of man and its short, strong, straight beak, its lively and social habits and tenderness for its young. Thoughts like these serve to employ one's mind and keep in touch and harmony chisel and melody of the hammer as the stone is gradually becoming less in size, whilst the figure, or head, or grotesque, or ornament grows larger as the mind and hand make them pleasant and fair to look upon.

Most of the scaffold had been removed. When one of the workmen was obliged to use a ladder from where we

were standing carving, and letting the top of the ladder rest against the upper part of the newly-erected spire, his duty was to oil the whole of the stone after it had been fixed and quite dry. He carried an ordinary can such as used by painters. Whilst thus engaged in oiling the finial he exclaimed, "Just fancy, the birds have already perched upon the top of this finial." "Yes," was the reply, "I was out early this morning looking up at the finial to see its effect and proportion in conjunction with other parts of the spire when I saw a throstle and heard it singing "Teleclese! teleclese! teleclese!"

Years ago I used to have a throstle in an old rabbit-hutch. The bird used to perch upon the top peak in the gable of the hutch and sing quite softly and tenderly, and its plaintive notes were in unison with my own thoughts and feelings; when suddenly the bird would stand upon the floor of the hutch and sing loud, "Teleclese! teleclese! teleclese!"

When quite a little boy my father explained to me that the old stone finial which terminated the crocketed octagonal spire over the apex or gable of the south front of the transept was to represent "Nero fiddling whilst Rome was burning." The old perpendicular style of spire and finial was removed at the restoration of the south front about the year 1873; the finial, viz. the old fiddler, was placed in the crypt of the cathedral for safety, and there he remains silent. Time and weather have touched him so tenderly, practically recarved him, and left the quaint bits of fun and humour modified, refined and beautified since it left the hand of the skilful and satirical old sculptor—not like some of the old gargoyles with their mouths open wide and grinning, as the moss grows in there, and the winds whistle through as well as the rain rushes from the spouts and falls below.

#### A CONTRACTOR'S ACTION.

THE award has been given by Mr. W. H. Patchell in the arbitration of Firth & Sons, Manchester, v. the Cardiff Corporation. It arose out of the contract for wiring the Cardiff Asylum at Whitchurch for electrical purposes.

The dispute originated owing to complaint being made

to the Corporation by its electrical engineer that the work was proceeding too slowly, that insufficient men were being employed and that the contractors were seeking to put upon the specification an incorrect interpretation. Messrs. Firth & Sons thereupon withdrew their men from the work and informed the Corporation that the men would be withdrawn until the questions raised by the Corporation's electrical engineer had been definitely settled. The Corporation then gave notice under the terms of the contract requiring the company to proceed with the work within a period of seven days. Messrs. Firth & Sons not having complied with this notice, a second notice was given to the firm determining the contract. Messrs. Firth & Sons, alleging that the contract had not been validly determined, required that the matter should go to arbitration. The company claimed 1,602*l.* 1*s.* 6*d.*, and the Corporation claimed 5,169*l.* for alleged breach of contract. The case raised the important question whether the Corporation, which had entered into an agreement to pay the contractor certain sums on account, could terminate that agreement on the ground that the contractor had not proceeded with the work. On the other hand, the contractor alleged that the fact that the Corporation had neglected or refused to make payments on account, and that the engineer had neglected or refused to grant certificates for large amounts of work done, was of itself a sufficient ground to entitle him (the contractor) to cease work until such payments had been made.

Mr. Patchell has found that the certificate was withheld within the meaning of clause 26 of the agreement, which gave the right to the contractors to suspend the works, and deprived the Corporation of the right to terminate the contract. He has further found that the notice by the Corporation to terminate the contract was unreasonably and vexatiously given, and that the contractors did not within the meaning of clause 26 fail for fourteen days to proceed with the work. He finds in favour of the contractors for materials delivered 979*l.* 16*s.* 2*d.*; for labour done, 287*l.* 16*s.* 7*d.*, and as reasonable profit 154*l.*, making a total of 1,421*l.* 12*s.* 9*d.*, the amount claimed against the Corporation. He also orders that the costs of the contractors be paid by the Corporation as between solicitor and client, also the costs of the award, viz. 169*l.* 1*s.* The arbitrator also dismisses the counterclaim of the Corporation.

### GYPSUM IN THE DOVE VALLEY.

A MEETING of the North Staffordshire Institute of Engineers was held last week at Hanley under the presidency of Sir Lees Knowles. Among the papers read and reported in the *Staffordshire Advertiser* was one by Mr. Trafford Wynne on "Gypsum and its Occurrence in the Dove Valley." He said gypsum is found very widely distributed over the world, especially in the vicinity of the deposits of rock salt, although much more rarely under workable conditions. In England it is found in the marls overlying the salt deposits of Cheshire, Worcestershire, Durham and Staffordshire. The Chartley mine, worked on an extensive scale some years ago, is in close proximity to the present salt wells near Stafford. The workable deposits in England, extending from the Eden valley, near Carlisle, to Battle in Sussex, lie near a line drawn between these two places. The writer has seen extensive deposits in Northern Persia, near the borders of the great Salt desert. It is there known as "gatch." It is soft and extremely white, and closely resembles the gypsum found in detached bodies, locally called "self pillars," found near the edges of the main deposits near Tutbury. The writer has also seen gypsum in Mexico and other countries. After referring to the history of the use of alabaster by sculptors, he proceeded to speak of the composition of varieties of gypsum. He went on to say sulphate of lime is found in most of the geological formations. The workable beds in the Northern and Midland counties of England are found in the New Red Marl or Upper Keuper division of the Trias. In Sussex the deposit occurs in the Purbeck beds. The method of deposition of these beds is a question which does not seem to have been as yet properly elucidated. Professor Archibald Geikie says:—"The study of the precipitations which take place on the floors of modern salt lakes is important in throwing light upon the history of a number of chemically formed rocks. The salts in these waters accumulate until their point of saturation is reached, or until by chemical reactions they are thrown down. The least soluble are naturally the first to appear, the water becoming progressively more and more saline till it reaches a condition like that of the mother-liquor of a salt works. Gypsum begins to be thrown down from sea water when 37 per cent. of water has been evaporated, but 93 per cent. of water must be

driven off before chloride of sodium can begin to be deposited. Hence the concentration and evaporation of the water of a salt lake having a composition like that of the sea would give rise first to a layer or sole of gypsum, followed by one of rock salt. This has been found to be the normal order among the various saliferous formations in the earth's crust. But gypsum may be precipitated without rock salt, either because the water was diluted before the point of saturation for rock salt was reached, or because the salt, if deposited, has been subsequently dissolved and removed. This theory would necessitate the belief that the deposits now being considered were formed by the evaporation of a salt lake, and certainly the presence of the salt-beds on the western side of the plateau, under which the deposit is found, lends some support to this idea." The principal of the workable deposits, if not all of them, are found in valleys such as the Eden valley, the Dove valley and largely in the Trent valley, below its confluence with the river Dove and afterwards with the river Derwent of Derbyshire. Both of these last-named rivers have their source in limestone regions, and it may be that the beds of gypsum have been originally carbonates and afterwards changed by the action of springs into sulphates. Again, the rivers may have had something to do with the deposition of the gypsum beds. In the case of the Dove valley it rather seems that the river had cut through the overlying strata and denuded the beds, and so exposed them on the valley side. It must be noted that the gypsum is here found only on the south side of the valley and considerably above the present river level. The section affords some idea of the position of the deposit with reference to the river Dove. After speaking of some of the uses of gypsum, the writer said, with regard to gypsum deposits of the Dove valley, it has long been recognised by those who have studied the subject that it is to the presence of these deposits under and in the hills from which the breweries derive their water supplies that the pre-eminence of the beers brewed in Burton-upon-Trent is due; and this fact, as well as the ancient history of the deposit already alluded to, gives a special interest to the study of the deposits of the Dove valley. The deposit, so far as at present proved, lies near the village of Hanbury, and just to the south of the road which leads from Tutbury Castle to Sudbury. The three mines which are now working are situated

close to this road. Two of the mines are situated at Fauld and one at Draycott-in-the-Clay. The mine operated by Messrs. J. C. Staton & Co. at Fauld has been worked by them or their predecessors for very considerably over 100 years. It was originally an open quarry, and there is still to be seen the old kiln where the gypsum was burnt, and the threshing-floor where the burnt stone was beaten with flails into powder, and in that condition it was sold as plaster. In those days, sixty to eighty years ago, the production of alabaster and plaster was so limited that it was customary, when a large building operation was entered upon, for the owner or builder to pay down a lump sum to the quarry-master, sending an agent to see that he obtained the contracted-for quantity of alabaster or plaster, and that it was not sold elsewhere. Messrs. J. C. Staton & Co. had another quarry adjoining the old one, but both are now abandoned owing to the cost of removing the overburden, and the deposit is worked as a mine by means of a tunnel running into the hill-side. The stone is dressed and sorted at the tunnel entrance and then sent over a private railway into the valley, and over the river Dove to the North Staffordshire Railway at Scropton, and thence conveyed to the mill at Tutbury. This mill, originally the cornmill for Tutbury Castle, is now worked by turbines, the motive-power being furnished by the waters of the Dove conveyed in a flume, cut in the reign of Henry VII. The other mine at Fauld, worked by Messrs. P. Ford & Sons, immediately adjoins the mine worked by Messrs. J. C. Staton & Co. The mill is erected in close proximity to the mine. The third mine working this deposit, at Draycott-in-the-Clay, was opened a few years ago by the Plaster, Brick and Stone Company, Ltd. The mill is also situated at Draycott. The gypsum is found outcropping on the hill-side and has been proved to be a continuous though irregular deposit, which runs back—how far has not yet been proved—into the hills. The gypsum is of the massive variety, crystals being very rarely met with. All classes of stone are mined, from large alabaster blocks, either pure white or veined or coloured and the best white gypsum from which the highest grades of plaster are made, through the various grades down to stone so mixed with marl as to be valueless. Anhydrite, or as it is called locally, "hard stone," is met with in varying quantities. It is difficult to

ENGINEERS,

Park Works, MANCHESTER.      Salford Ironworks, MANCHESTER.  
Queen Anne's Chambers, Westminster, LONDON.

account in any satisfactory way for the presence of this anhydrite in the gypsum. Mr. D. Burns states that in the Eden valley it is found about the middle of the seam, and apparently it is there about the same thickness throughout. In the Dove valley deposit it is found, according to the writer's experience, sometimes in one part and sometimes in another part of the seam, although never immediately in contact with the roof or floor of the mine, and it comes in and goes out without any apparent reason. There seems no dividing line and no clear cleavage between the gypsum and the anhydrite. The hard stone is often intimately mixed with the best gypsum stone; it then has much the same appearance, and at times it is only by testing with the pick that the hard stone can be detected. Near the surface anhydrite is rare, and it seems to increase with the thickness of cover. Where the seam is at its thickest—and at times it runs over 20 feet thick—a seam of anhydrite is often found above the usual height of the stone, with a further thickness of stone of the best quality above it. As the workings proceed further into the hill the quantity of anhydrite seems to increase, and it then occurs more frequently near the middle of the seam. It still does not form a continuous seam, but will extend for 15 or 20 feet at one place and will then disappear only to reappear at some distance further on. There is no apparent reason either for its coming in or going out. It does not appear to be affected by water, as it is found in some parts of the mine where considerable water is met with. The writer is unable to evolve any satisfactory theory to account for the presence of anhydrite in the gypsum deposit, and all that occurs to him appear to be inadequate, when examined in the light of experience. An interesting feature of these gypsum deposits, but one which adds considerably to the cost of working, is the presence of "wash-holes." They are circular holes, varying in size, which run up through the stone, and often through the hard roof-marl into the soft overlying marl. Some of these holes are large and circular in form, and appear to have been formed by the "swirling" action of water. The cavities of wash-holes are usually empty. Other holes are found consisting of long, narrow fissures filled with the soft earth which lies above the marl-roof. These fissures are found when approaching any surface depression, and require to be timbered. The roof of

the deposit is composed of hard marl containing still harder blue-marl "bullets." It stands very well when dry, but in wet places a layer varying from 18 inches to 3 feet in thickness soon "sags" and, where a road requires to be kept open, this must be either pulled down or timbered. Oak props and second-hand railway sleepers for bars have proved satisfactory in this mine. The floor of the mine is a hard marl similar to that forming the roof. Mr. Wynne concluded with remarks on the methods of working and the extent of the deposit.

Mr. Bennett H. Brough pointed out the importance of the paper, as the Dove valley deposits were now described for the first time. He noted in the general portion of the paper a few omissions. For example, Paris was not mentioned as a source of supply, and yet two-thirds of the world's supply of gypsum came from the Montmartre district; indeed, the world's annual production at the present time was 3,000,000 tons, of which France produced 2,000,000 tons. The Paris deposits were of the Tertiary age, unlike the Nottingham, Staffordshire and Cumberland, which were of the Triassic, and the Sussex, which were of the Purbeck age. The author too did not mention the Tuscan alabaster. The deposits at Volterra had long been worked. Scientific progress had hardly touched the technology of plaster. No more was known of its action than was known by the ancient Egyptian manufacturers, who did not concern themselves about the temperature of burning nor about the degree of fineness of the material. These considerations had induced the International Testing Congress at Brussels last week to appoint a special committee to deal with gypsum, and to ascertain whether it would not be possible to draw up a scheme for the unification of methods of testing that material.

Mr. Wynne, in replying to criticisms, said that works which a few years ago were turning out 1,000 tons of plaster were now producing 10,000 tons, and the machinery and methods of manufacture were quite up to date. It had been suggested that plaster of Paris was produced by calcining gypsum. A variety known as Italian plaster was produced by calcining and grinding gypsum; but plaster of Paris was gypsum ground and then boiled, and in the last twelve years there had been a great improvement in the method of boiling.

## Are you interested in WOOD PRESERVATION?

Apply to the ANTHROL Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of ANTHROL and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. ANTHROL does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, ANTHROL, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

separate form on proof paper suitable for framing.

**The Corn Field.**—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOUIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudouin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial*. "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage*. "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudouin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman*. AND NUMEROUS OTHERS.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

**Galatea.**

From the Painting by RAPHAEL in the Villa Farnesina, Rome.  
Size 30 in. by 22 in. Price Two Shillings. Free by  
post, carefully packed inside patent roller.

**St. George.**

From the Painting by RAPHAEL, in the Louvre.  
Size 15 in. by 20 in. Price One Shilling and Sixpence. Free by  
post, carefully packed inside patent roller.

May be obtained from all Newsagents, Booksellers, Messrs. W. H. SMITH & SON'S Bookstalls, or from the  
**Publisher, P. A. GILBERT WOOD, Imperial Buildings, Ludgate Circus, London, E.C.** (FULL LISTS ON APPLICATION.)

Printed by SPOTTISWOODE & CO. LTD., at No. 5 New-street Square, E.C., and Published for the Proprietors by P. A. GILBERT WOOD at the Office, Imperial Buildings, Ludgate Circus, London, E.C.—Friday, September 21, 1906.

## GOOD ADVICE.

Architects, Contractors, and others are recommended to journey by the

# GREAT CENTRAL RAILWAY.

They will find it

**RAPID TRAVEL IN LUXURY.**

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

### NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

### EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

### TENDERS, ETC.

\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

### COMPETITIONS OPEN.

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The general purposes committee of the Kingston Corporation have recommended the Town Council to issue invitations to a conference between representatives of the Corporation, the Surrey and Middlesex County Councils, the Kingston Bridge Trustees and the Charity Commissioners, with a view to arriving at an amicable solution of the difficulty of coming to an agreement as to the widening or rebuilding of Kingston Bridge.

An inquest was held at Sunderland infirmary on the 20th inst. on a mason's labourer who was fatally injured through the breakdown of some scaffolding. The coroner, in addressing the jury, said if they decided that any of the men on the job had been guilty of negligence in erecting the scaffold a verdict of manslaughter should be returned against those responsible. It seemed to him, however, that the jury could not distinguish between the men. They appeared to be all equally to blame. The jury agreed that the death was due to the breaking of a scaffold pole, and added that they were of opinion that the pole was unfit for the purpose for which it was used. They suggested that the builder should be censured for having used such poles. The coroner, addressing the master builder, observed that the jury had come to the conclusion that the man's death was due to the negligence of every man on the job. They did not pick out one more than another as being culpable, but they suggested that in the future a foreman should be employed and the scaffolding material overhauled and renewed. If, unfortunately, another death should occur through the same cause and same neglect, the master builder would be held responsible.

**NEW CATALOGUE.**

Gymnastic appliances are now a necessary part of the furniture not only of schools and colleges, but of independent clubs and clubs attached to various institutions. The long list of gymnasiums fitted and furnished by Mr. Gardiner shows that we in this country are competing with the Germans in physical exercises as in other modes of training. It is not always easy to strengthen muscles by special pursuits in the open air. But even in the smallest room it is possible to fit up an apparatus which will enable a man or a woman to go through beneficial exercise. The catalogue is therefore worth the attention of architects, for if ordinary workmen are employed to set up ladders, bridge ladders, various kinds of horizontal bars, &c., which bring a strain upon roofs and walls, inconvenience may be caused. Mr. Gardiner has carried out contracts for the Admiralty, the War Office and the India Office for several years, and he has recently fitted up the new barracks at Shotley with Swedish apparatus. The list of barracks is evidence of his unflinching success.

**TRADE NOTES.**

MESSRS. SAINSBURY BROS., LTD., clock works, Walthamstow, have just erected a large chiming clock at Shelley Church, Suffolk.

A LARGE illuminated bracket clock has been erected by Messrs. W. Potts & Sons, Leeds and Newcastle-on-Tyne, for Mr. W. Scott, proprietor of the *Observer* office, Rochdale. The clock is from the plans of the late Lord Grimthorpe, and celebrates the fiftieth jubilee of the newspaper, also the town jubilee of incorporation. Messrs. W. Potts & Sons have also just completed a new chime clock and bells for Urnston Church, Manchester, from Lord Grimthorpe's plans, the same being a memorial to the Reade family, of Urnston; and are now completing a new clock and chimes and new south dial for the Dean and Chapter of Ripon at the Cathedral, Ripon, from the late Lord Grimthorpe's plans. They have also just completed a new illuminated clock with bell for the Bainbridge family at Yarn Road new Wesleyan church, Stockton-on-Tees, and other important work.

THE town clerk of Dewsbury has been instructed to inform the Local Government Board that the Corporation intend to purchase the Hippodrome site and the Corn Mill estate for the purpose of extending the market; also the Old Foundry estate, with the object of constructing a new thoroughfare from Northgate to Foundry Street and widening Northgate. The remainder of the latter site will be offered for building purposes within the next ten years.

THE Grimsby Town Council have received the opinion of Mr. Balfour Browne, K.C., respecting three railway level crossings at Grimsby which occasion great inconvenience. He considered that such crossings could not be reasonably determined to be dangerous to the public, and that the railway companies could not be compelled to provide vehicular bridges or subways.

THE Dundee police committee recommend that provision should be made in the provisional order for powers to furnish house or lodging accommodation for members of the police force, in order that they might be concentrated and made available for duty on short notice on occasions of emergency, such as a great fire, public riot, &c. Further, it was decided to obtain Parliamentary sanction for the erection of police signal and fire alarm boxes, and also powers to safeguard the public against overcrowding in places of public amusement and recreation.

BACK HILL, HATTON GARDEN; & RAY ST., FARRINGTON ROAD,  
Telegrams, "Snewin, London." LONDON, E.C. Telephone 74 Holborn.**MARPEDO WHITE JAPAN****SLOW DRYING.**

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

## VARIETIES.

THE Bangor Normal College authorities are considering a scheme of enlargement which would cost 10,000*l.* and accommodate seventy additional students.

THE Local Government Board have sanctioned the loan for the proposed new secondary schools at Maldon, Essex, and building operations have just been commenced.

THE plans for the buildings on the new racecourse at Ayr have been before the Dean of Guild Court and have been passed. The estimated cost is 10,000*l.*

THE Cambridgeshire County Council have after some years consideration decided on the purchase of a site 4 acres in extent for a girls' school in Cambridge. The price is about 1,000*l.* per acre.

PRESIDENT ROOSEVELT has extended the eight-hour law so as to make it apply to all public work carried out under the supervision of any Government Department. The extension affects river and harbour improvements.

THE Berwick Town Council have decided by fourteen votes to seven to adopt a water scheme for the whole borough, including Berwick, Tweedmouth and Spittal, at an estimated cost of between 18,000*l.* and 20,000*l.* This scheme was defeated in the Council last January.

SIR WALTER GILBEY, Bart., has erected eight cottages at Bishop's Stortford and conveyed them to trustees, who are empowered to let them to the aged poor, married couples to pay 9*d.* and single persons 6*d.* per week rent. The tenants are to be chosen by ballot.

MR. JOHN ALEXANDER WEBSTER, head of the firm of Webster & Cannon, contractors, died on Monday. He was well known in the building trades throughout the country, his firm having carried out some large Government contracts.

THE members of the Bradford Corporation health committee on Monday visited Liverpool to inspect the labourers' dwellings provided by the City Corporation. The Bradford Corporation have up to the present not erected any workmen's dwellings.

THE Beath School Board have agreed to build two new schools, each to accommodate between 300 and 400 pupils. One of the schools will be built in Cowdenbeath and the other in Kelty. The erection of the schools has become

necessary owing to the rapid growth of population consequent upon the mineral development in that part of Fife.

THE Mansfield Town Council have approved a scheme furnished by the borough surveyor for new municipal offices. The scheme comprises a one-storey building with a flat roof, the walls being sufficiently strong to carry another storey, and providing thirteen shops and offices. The estimated cost was 2,900*l.*, the estimated rentals 350*l.*

THE Coventry City Council have resolved that Earlsdon County school be enlarged, at a cost estimated to amount to 5,735*l.*, and that application be made to the Local Government Board for sanction to a loan of that amount. A continuous growth of the population takes place in that district and extensive building operations are in progress.

It is reported that more important operations than have yet been undertaken are in immediate contemplation in connection with the new naval base at Rosyth, on the Firth of Forth. The railway is nearing completion, and everything is in readiness for making a beginning with the seaward works. With a view to obtaining more reliable information than is afforded by boring as to the strata under the sea bottom, Sir John Jackson & Co., of London, have been given the contract to sink a caisson. This will be followed by the building of a sea wall.

At the meeting of the Board of Management of the Manchester Royal Infirmary on Tuesday an account was given of the progress which is being made in the erection of the new infirmary at Stanley Grove. Some of the blocks are roofed and others are ready for roofing. Seven hundred men are working at Stanley Grove, and with the men in the quarries and other places getting material ready for use the new infirmary is finding work for probably one thousand men. Fifty thousand bricks are being delivered on the site day by day, and about 300 tons of stone every week.

SEVERAL propositions are being made for new harbour works in Algiers. At Nemours the authorities have under consideration the expenditure of 132,000*l.* on the construction of a port; the sum of 48,000*l.* has been asked for for harbour improvements at Arzew; at Algiers a project is in view for joining the island of Al-Djefua to the shore by a mole; and works are in progress at Bône which will cost

325,800*l.*, the works for the new phosphate quay and the making of a new quay at the mouth of the Seybouse having been decided upon.

THE Llandudno District Council are now about to let a contract for the construction of the Mostyn Broadway, which is to connect Mostyn Street with the Craigydun suburb, and have agreed to insert a clause in the following terms:—"The contractor shall pay to all persons engaged by him in carrying out the works mentioned in the specification relating thereto such wages as are generally recognised in the district as the standard rate of wages in each trade for all competent workmen employed by him, and shall from time to time produce to the Council sufficient evidence that such wages are paid by him."

A DEPUTATION from the fair contracts committee of the Manchester and Salford Trades Council on the 21st inst. waited upon the watch committee of the Salford Corporation, for the purpose of protesting against an alleged practice of the watch committee in employing members of the fire brigade in a dual capacity. The deputation included representatives of wheelwrights and electricians, and it was said that the watch committee employed firemen who were also wheelwrights, electricians, painters, &c., and only paid them firemen's wages. The committee promised to investigate the matter, and to give a reply to the deputation in due course.

ACCORDING to an American Consular report, in the south of Portugal a serious attempt is being made with some chance of success to bring back into cultivation a large tract of land. Some energetic members of society in the district of Serpa, in combination with the municipal authorities, have set to work upon 100,000 acres, dividing it up into

allotments of 15 acres each and letting it at a nominal rent, calculated according to the estimated value of the land, free of local rates and taxes for ten years. Quite a heterogeneous mixture of settlers have already taken possession of their tenements. Carpenters, masons, doctors, chemists, barbers, seamstresses, tailors, and even beggars figure in the list.

THE Sunderland education committee were informed on Tuesday that the actual cost of labour and material in connection with the work done at the Thomas Street school by the Corporation was 131*l.*, as against 256*l.*, which was the lowest tender for it. The specifications were the same in each case. With regard to the Chester Road school the cost was 65*l.*, whereas 90*l.* was the lowest tender, and the next lowest was 130*l.* With those facts before them the committee authorised the borough engineer (Mr. Moncur) to do the outside work of the following schools:—Hendon Valley, 33*l.*, as against a tender for 65*l.*; Redby school, 42*l.*, as against a tender for 61*l.*, and James William Street school 46*l.*, as against a tender for 65*l.*

A SAN FRANCISCO correspondent, writing in the New York *Iron Age* of September 6, says:—The total amount of structural steel required in the city will be about 250,000 tons. An immense quantity of cement will be needed. The imports of both steel and cement so far have been light. The city is full of scrap-iron and steel, but not to anything like the amount that has been reported. Scrap steel brings 9 dols. per ton of 2,240 lbs. in large lots. There is enough scrap-iron and steel to supply this market for many a day. Of course, much will be sold to be shipped outside. The San Francisco market has been taking about 30,000 tons a year, which in ordinary years has brought very good prices.

THE education committee of Darlington announce the opening a few weeks hence of a day preparatory trade school for boys who intend to enter the engineering, building and allied trades. Both employers and trade union officials have given a welcome to the scheme, and many employers are prepared to engage boys direct from the school. The object is to afford a brief period of thoroughly practical training before a boy enters the works. Lessons will be given on the properties of the chief materials used

in the engineering and building industries and practical mathematics (about five hours a week) as applied to engineering and other trades, including arithmetic, practical mensuration, short methods of calculation and workshop problems. There will also be five hours of general education.

THE St. Pancras Borough Council have passed an important part of the London County Council scheme for the electrification of the tramways from the north to the south. There was also a discussion concerning the electrification of the trains in Hampstead Road to Camden Road, from High Street, Camden Town, to Finsbury Park and from Camden Road to the Hampstead Terminus. It was suggested that the conduit system should be adopted for the first route and the overhead system for the other two. The recommendation that the London County Council be informed that the Borough Council adhere to its former resolution, that it is desirable that one system of electrification should be adopted, and requesting the London County Council to reconstruct the whole of the line in St. Pancras on the conduit system, was adopted by a large majority.

THE Barnsley Town Council on the 25th inst., on the recommendation of the sewage works committee, who had reported as to the best mode of proceeding with the proposed additional sewage works, resolved that the borough surveyor be instructed to advertise for tenders for constructing Sections 2 and 3 of the proposed additional sewage works, namely, the sewage distributors, metal pipes and special castings, the septic tanks, channels, carriers and bacterial filters. The plant would be capable of dealing with  $7\frac{1}{2}$  million gallons of sewage and storm water. The Local Government Board had sanctioned the borrowing of 33,447*l.*, of which there was still a sum of 24,464*l.* unexpended. The cost of the work included in the proposed immediate scheme would be from 18,000*l.* to 20,000*l.*, which would leave about 5,000*l.* to be dealt with later.

An experimental motor waggon has been introduced in North Staffordshire as a possible competitor to the local railway companies in the carriage of goods from the Potteries. It is complained that the railway rates are exorbitant. On Monday morning a powerful motor-waggon left Hanley with a  $5\frac{1}{2}$ -ton load of crockery goods for con-

veyance to Liverpool, a journey calculated to occupy eight hours. After being unloaded at Liverpool the motor-waggon will take up a load of grain for conveyance to mills at Hanley. It is anticipated that by this system goods will be carried more cheaply, conveniently and quickly than by rail or canal, and with less damage by breakage. The car is of 70-h.p., and while carrying six tons itself, will also have a trailer with a further load of four tons. It will make trips for several weeks, and it is then intended to place the results before the manufacturers and traders of the district, and ask them to interest themselves in a company which is to be formed.

At a meeting of the Neath Board of Guardians on the 19th inst. a letter was read from Mr. D. W. James, solicitor, of Swansea, stating that he was acting on behalf of Cammell, Laird & Co., Ltd., in various negotiations connected with their contemplated building of large iron and steel works on Crumlin Burrows. There were, he said, a great many preliminary matters to be arranged, but if these were arranged then Cammell, Laird & Co. would immediately proceed with the erection of the works. It would take at least five years, and possibly seven, before the whole of the works were completed, although they might be manufacturing pig-iron within two years. He was instructed to negotiate with the Board for an exemption from payment of rates in respect of these works for a period of seven years. A great many towns in the kingdom were granting these exemptions in favour of new industries, and Cammell, Laird & Co. had been offered exemptions already at other places. The site for which negotiations are proceeding at Swansea for the extensions Messrs. Cammell, Laird & Co. contemplate is on the foreshore of Swansea bay, and east of the harbour. It comprises some 200 acres of what are known as the Crumlin Burrows.

A DEPUTATION from the Holyhead Urban District Council on Saturday interviewed the Parliamentary Secretary of the Board of Trade on his visit of inspection. It was urged that the Government should remove sunken rocks called Platters Rocks, which lie across the harbour entrance, and are 18 acres in extent. In addition, there was an urgent necessity for a deep-water berth within the harbour, as its absence caused considerable inconvenience to vessels coming into the roadstead disabled. The Council appealed

for a quay from Carreg Walden, on the west side of Salt Island, to the buoy on the north end of the island; its length in the northern direction would be 1,200 feet, thence east 600 to 700 feet, covering the dangerous Cybi reef and Carreg Jordan. The estimated cost of the removal of the Platters Rocks to the lowest level was 250,000*l.*, to 25 feet 200,000*l.*, to 20 feet 50,000*l.*, to 16 feet 30,000*l.*

The great reservoir and waterworks of the Loughborough Corporation at Blackbrook, which have been in course of construction during the past six years, and cost over 100,000*l.*, have been declared open. The masonry and concrete dam is 525 feet in length across the valley, 65 feet thick, and measures between 50,000 and 60,000 cubic yards. At the present time there are about 85,000,000 gallons of water stored, and 29,000,000 at the Nanpantan reservoir. The down-stream face wall is built of blue bricks, bonded throughout in such a manner that there is not a single continuous horizontal joint, and this is securely bonded into a backing of specially fine concrete. The dam is 14 feet thick at the weir level, and six arches of 25 feet span each have been built to form an overflow and to carry a roadway 9 feet wide across the dam. There is a tail pond to act as a water cushion and prevent all scouring action on the toe of the dam during the heaviest flood discharges, and a valve tower and valve house with apparatus so arranged that the water may be discharged out of the reservoir at various heights. Messrs. H. Fotherby & Sons, of Burnley, carried out the work until April 1904, when it was carried to a conclusion by the Corporation. The engineers were Messrs. G. & F. W. Hodson.

#### PRIZES FOR INDUSTRIAL DESIGN.

THE Council of the Society of Arts hold a sum of 400*l.*, the balance of the subscriptions to the Owen Jones Memorial Fund, presented to them by the memorial committee on condition of their spending the interest thereof in prizes to "students of the School of Arts who, in annual competition, produce the best designs for household furniture, carpets, wall-papers and hangings, damasks, chintzes, &c., regulated by the principles laid down by Owen Jones."

The prizes will be awarded on the results of the annual competition of the Board of Education, South Kensington. Competing designs must be marked "In competition for the Owen Jones Prize."

No candidate who has gained one of the above prizes can take part in the competition.

The next award will be made in 1907, when six prizes are offered for competition, each prize to consist of a bound copy of Owen Jones's "Principles of Design" and the Society's bronze medal.

#### THE "OXFORD" REDECORATION.

THE annals of this popular place of entertainment, which occupies the site of the old Bear and Castle, in Oxford Street, are quaint as well as interesting, and it would be difficult to realise that at one time the St. Giles's village pound stood nearly opposite the old hostelry in question, from the back windows whereof might be seen a little more than a century ago such vestiges of rural scenery as an orchard, a pond and a windmill.

On the ground mainly afforded by the old inn-yard the Oxford Music Hall, then considered to be the finest of its class in London, was built and opened in the early part of 1861. It was partially destroyed by fire in 1868, but reopened the following year after undergoing reconstruction. In 1872 a disastrous fire again occurred, which this time left little more than bare walls and charred benches. However, in the following year a new and enlarged Oxford was again thrown open to the public. This handsome and luxurious structure was designed by Messrs. Wylson & Long, and Mr. Frank Kirk was employed as contractor.

During the last three months, and under the superintendence of the same firm of architects, the "Oxford" has been undergoing a transformation, and now without having suspended the performance for a single night, the public will find it redecorated and refurnished in a style and manner which for comfort and elegance, it is claimed, vies with any similar building in London. Attention has not been confined to the auditorium alone, as is too often the case with theatre decoration, but all the approaches, staircases, passages, &c., have been completely renovated.

## CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

**ARTHUR L. GIBSON & COMPANY,**

20 & 21 TOWER STREET, UPPER SAINT MARTIN'S LANE, LONDON, W.C.

The ground floor and first circle have been entirely re-seated with tip-up automatic chairs upholstered in rich red velvet, and some remarkable structural alterations have been carried out. The grand salon on the O.P. side of the stalls has been enlarged, thus forming a handsome adjunct. On the opposite side of the stalls the wall which formerly obstructed the view has been removed and replaced by two slender columns, encased in *repoussé* copper. Generally, it may be added, the interior of the building has been beautified in every respect, so that the comfort of the audience is much increased.

#### A NOVEL FIRE-MAIN INSTALLATION.

In the West End of London the waterworks pressure is in many houses insufficient to enable effective jets for fire extinction to be thrown on the upper floors, and several devices have been adopted to increase the pressure. At Mr. Alfred de Rothschild's residence in Seamore Place, Curzon Street, Messrs. Merryweather have just completed a system which has some new features. As shown in our illustration, the fire-main is carried up to the roof, where a large tank is connected to it. This tank is filled from waterworks' main through a ball valve and a reflux valve is fitted to the fire-main pipe, so that when the pumping apparatus increases the pressure the water cannot return to the tank, but supplies the hydrants placed on each floor. The pump, which is of the "Hatfield" treble-barrel type, driven by an electric motor, is placed in the basement and takes suction from the roof tank. The starting switches and resistances are placed near by and an ingenious float arrangement working in a small tank placed over the large one on the roof is used to operate the main switches. By this device there are no heavy cables carried through the building. When a fire occurs and the hydrant is opened the smaller tank empties into the fire-main, the float falls and the pump automatically starts work. As soon as the hydrants are closed again the tanks fill up, the float rises and the pump stops. A relief valve with the delivery into the smaller tank is provided, so that no damage will occur

### TECHNICAL INSTRUCTION.

THE name of Cassell is identified with self-education by the aid of books. The firm was among the earliest pioneers in technical instruction, and the company follow the example. In their later publications they have shown how valuable information can be obtained by almost the poorest classes. The series of "Mechanics' Manuals," edited by Mr. P. N. Hasluck, is issued at the rate of 6d. a volume. The price is the more remarkable when it is found that illustrations are numerous in each. They also issue a new edition of their "Engineer's Handbook" and "Building Construction," by Prof. Henry Adams, and their "Carpentry and Joinery" in threepenny numbers; several of the illustrations are in colour and they have the character of expensive works. The company, like Carlyle, believe in the advantage of "knowledge which will hold good in working," and bring it within the attainment of all classes.

the same firm have supplied one of their "Greenwich Gem" steam fire-engines to Halton, Mr. de Rothschild's mansion, near Tring.

THE Board of Education have approved of the plans for the erection of a new infants' school by the Essex education committee at Leigh-on-Sea, and also plans submitted for the new mixed school and enlargement of infants' school at Dagenham, and for a further new school at Wanstead.

THE Cape Colony Government are putting forward an amended scheme of railway improvement which would involve an expenditure of two millions sterling. The various lines to be built make up collectively a length of 770 miles. The longest of the new lines is that between Barkly Bridge and Alexandria, 90 miles, and the estimated cost is 3,500*l.* per mile. There is another from Cathcart of 49 miles, costing about 2,800*l.* per mile. The Ewidekuil to Vogelfontein line will be 46½ miles long, and will cost in all 272,000*l.* The Hopefield to Hoetjes Bay line is 40 miles in length and 62,640*l.* is being earmarked for it. In addition to this, the Cape Government propose to spend nearly a million on the improvement of existing lines.

London, E.C.

**WATER SUPPLY OF DUBLIN.**

A MEETING of the Dublin Corporation was held on Friday last to consider a report of the waterworks committee recommending the provision of an additional storage reservoir at Roundwood. The Chairman of the waterworks committee said the report had been drawn up with great care. Some people had been asking was there any necessity for a second reservoir, and to answer that question it would be necessary to refer to the genesis of the scheme. In 1893 the citizens were face to face with a water famine. That was most unexpected, for prior to that time it was thought that the Vartry water would never give out. In 1893, however, no water was to be had in many parts of the city, and the Corporation were obliged to fill their pipes with water from the canal. In South Dublin the people for many months could get nothing but canal water, which had been condemned for generations prior to that date. The canal water contained too much lime, which it was almost impossible to eliminate by any process of filtering. It became necessary, therefore, that the Corporation should undertake the proposed work if they were to be in a position to supply the citizens with an adequate supply of water. Applications had been received from all parts of the city for the supply of water for motor-power—such applications were being received almost every week. The advantage of having a second reservoir was obvious. If they had a second reservoir, then, in the event of anything going wrong with the present reservoir, they would still be able to conduct water from the second to the present filter beds, so that the citizens of Dublin would never be without a supply of water. When Sir John Gray promoted the Vartry scheme he was of opinion that it would supply half a million of people, and so it would in the then existing state of things. But the circumstances had changed. There was no house erected in Dublin now without a bath-room and better sanitary arrangements. In Sir John Gray's time the people of Dublin were content with a half-inch pipe in the yard from which they filled their kettle or basin, now they would not be satisfied with that. They had got used to baths, and in the present enlightened age if they were deprived of the improvements which they valued so much there would

probably be a revolution in Dublin. The committee recommend that authority be given to apply for a loan of 134,842*l.* 8*s.* 6*d.* to carry out the scheme. That sum Mr. Eyre, city treasurer, thought they could obtain at 3½ per cent., which would represent an annual payment of over 5,000*l.* a year. He would ask the Council to consider the scheme as a commercial transaction. At present they were making about 10,000*l.* a year by the sale of water, and that income would be increased by carrying out the proposed scheme.

Alderman Doyle said the waterworks committee had no option but to grapple with the question. In portions of the north side of the city they could not for 500*l.* get a bucket of water at certain times during the day. If the people of the south side of the city were getting an abundance of water, the people on the north side were equally entitled as ratepayers to get a full supply.

Alderman Bergin said that Sir Charles Cameron had frequently reported to the public health committee respecting the reservoir at Stillorgan. It was very undesirable that the reservoir should be continued under present conditions, as it was frequented by thousands of sea birds, and it could never be clean as long as there was such an expanse of water.

Dr. M'Walter said that there were 14,000,000 gallons of water wasted in the year. An immense number of persons outside the city applied for water, but their engineer had to refuse them. Their engineer said that 50 per cent. of the water was wasted every year.

The report was then adopted.

**THE NEWPORT TRANSPORTER.**

THE chief dimensions of the Newport transporter which was recently opened are as follows:—Span—centre to centre of towers, 645 feet; clear opening between faces of piers, 592 feet; clear headway from high water to underside of span, 177 feet; height of tower above the level of the approach roads, 242 feet. The bridge consists of open latticework, with steel towers on each side of the river. Between these towers is suspended a girder framework bridge. Suspended by steel cables, the bridge crosses the

river at a height of 177 feet. The car is 33 feet in length by 40 feet wide, and is divided into a central roadway space and two footways, the latter being roofed in. The car, which is electrically lighted, will easily accommodate 200 persons, or four ordinary vehicles, with 100 persons on the covered footways. The maximum weight which under ordinary traffic the transporter will be called upon to bear is 15 tons, but the structure has been submitted to severe tests, ending with a total weight of 120 tons, of which 52 tons is the ordinary weight of the car, which is perfectly under control, and will cross the river in sixty seconds. It can be instantaneously stopped or reversed, so that there is no danger whatever.

The car is propelled by what is really a continuous rope of flexible steel wire, driven by an electrically-worked drum erected in the motor-house near the eastern end of the bridge. The suspension cables are sixteen in number, and under the maximum load the tension in each cable is nearly 48½ tons, but the breaking weight of the cable approaches 254 tons. Each cable weighs nearly 4 tons. The bridge has been designed to resist a wind pressure of 56 lbs. to the superficial foot. In no case does the structural steel work at a greater tensional load than 6½ tons to the square inch. The anchorages are large blocks of masonry resting on pile and concrete foundations.

The estimated total cost of the bridge is 90,000*l.*, and the contract for the foundations and steelwork was let to Mr. Alfred Thorne, of Westminster, at 59,062*l.* Mr. Haynes, the borough engineer, was associated with M. Arnodin, the designer, as joint engineer, and the steelwork was furnished by the Cleveland Bridge Company, Darlington, and the electrical equipment by Messrs. W. B. Brown & Co., of Liverpool.

#### NOTES FROM VENICE.

THE British Consul at Venice, in his last report on its trade and commerce, says:—There is great competition with Austria-Hungary and Germany in iron bars on account of the railway facilities and bounties granted by the Austro-Hungarian and German Governments to enable the iron merchants to compete successfully with those of other

nations. When Austro-Hungarian or German firms can prove they have exported a prescribed quantity of goods a premium for exportation is paid them by their respective Governments. For instance, a fine quality of iron in bars is cheaper at Vienna than at the original mines in Styria and Carinthia. The Alpine Company in Vienna sell the bars at 10 francs (8*s.*) per 100 kilos., while the price in the United Kingdom would be 15 francs (12*s.*) per 100 kilos. If freights are moderate the cost of transport by sea from the United Kingdom would be nearly equal to that by rail from Vienna, but there are the premiums, which enable the foreign rivals to compete successfully.

The Consul is of opinion that there would be a fair chance for the sale of steam-rollers in Italy. One of these engines made at Lincoln, in England, has been bought by the Rovigo Provincial Deputation, and is now in use for the roads in that province, and is giving satisfaction. British manufacturers of steam-rollers might have a circular printed in Italian and forward it to all the provincial deputations and municipalities in Italy, showing the advantages of adopting their locomotives for the proper maintenance of the principal roads in Italy. They will have, however, to bear in mind that the Germans are very active in pushing their machines and study the requirements of the authorities, and consequently British prices should be kept as low as possible and all facilities granted.

Portland cement was and is still much in demand and large quantities were imported, but, as the result of numerous factories having been started, there is a falling off in the amount imported. A limited quantity of cement is exported to Calcutta by a cement factory near Treviso. It is shipped on board the steamers of the Navigazione Veneziana, running to and from Venice and India.

There are several factories of modern reproductions of antiquities, such as pear and oak furniture, marbles, terracotta Madonnas, armour, &c., and a flourishing business is carried on in copying ancient works of art. This is stated to be a praiseworthy method of popularising and elevating the taste of the public. The shops are full of such reproductions, which I believe to be generally sold as such at moderate prices. Several of the imitations are so well carried out that they are almost as beautiful as the originals, while their cost is small.

The population of Venice consisted at the end of 1905 of 155,746 inhabitants. The town is healthy, the death-rate being one of the lowest in the kingdom—21.3 per 1,000. The foreign colony is increasing yearly.

Another large hotel has been built on the beach by the company which owns the Hôtel des Bains and the Lido Hotel on the lagoon side. Both the hotels fronting the sea are provided with luxurious accommodation, such as lift, electric light, modern English sanitary arrangements, and are surrounded by flower gardens planted with pine trees. There are lawn-tennis grounds, dining-rooms (where 200 persons can comfortably sit at table), reading, billiard and conversation-rooms and splendid open terraces. I should think it is not easy to find such a place as the Lido for persons in search of pleasure or desirous of a health restorative. The sunshine is tempered by constant breezes from the Adriatic.

Nearly all the disposable land is being purchased at high prices and levelled for the purpose of erecting new hotels, villas and other buildings. Thus the Lido, which only a few years ago was an obscure village inhabited by a few fishermen and peasants, is now becoming a modern town, with important buildings springing up on all sides.

The service of the steamers is very convenient, as there are large steamers starting from the Piazzetta every twenty minutes and small steamers starting every ten minutes, embarking and landing persons at all the stations on the Riva degli Schiavoni and on the Grand Canal as far as the railway station.

Another company has been formed to construct two large hotels, one high-class hotel on the seashore and a second, at which the pension will not exceed 6 or 7 francs a day, including bathing and other expenses. The company are also contemplating the construction of a tramway running to Malamocco on the lagoon side and returning by a new road on the beach. They state in their prospectus that their chief object will be to render the Lido easy of access to persons possessing moderate means and wishing to live economically in a respectable place.

The rebuilding of St. Mark's Campanile was progressing satisfactorily, and a portion of the masonry had been completed when a question arose about the five steps at the base of the Campanile, two of which in the old one were

underground. Some artists were of opinion that only three and not five steps ought to be seen in the new tower. The work was stopped and a special commission appointed to decide on the subject.

The gates and all the stones of the "Loggetta" by Sansovino were carefully collected, and it has been restored with the utmost care. Radical repairs are being effected in the Doge's Palace, in the church of St. Mark and other important churches in the town, under the direction of the architects of the Government technical bureau for the preservation of all monuments in Venetia.

### MAIN DRAINAGE OF DUBLIN.

THE works which have been constructed for the main drainage of Dublin were opened on Monday. Some idea of the magnitude of the system may be gained, says the *Irish Times*, by stating that it cost, roughly, 600,000*l.*, and that nearly 8 miles of sewers have been constructed at a depth of about 24 feet below the roadways. All the sewage of the city will now empty into two large intercepting sewers, laid down mainly along the quays, and after chemical treatment at the outfall works, the sludge, thoroughly purified and reduced for the most part into practically liquid form, will be discharged into the Channel at a distance sufficiently far removed to prevent its return with the tides.

Nearly half a century ago the Corporation were asked to embark on a scheme somewhat similar. The proposal was renewed fifteen years ago, and nearly five years afterwards the scheme took practical form. A main drainage committee was constituted, with the late Alderman Meade as its first chairman, and thereafter no time was lost in pushing on the work. Mr. George Chatterton, a distinguished Irish engineer, was chosen to draw up the plans, and with the assistance of Mr. Spencer Harty, the capable and experienced city engineer, the huge scheme finally took shape on paper. Mr. Chatterton and Mr. Harty decided that two great intercepting sewers would have to be made, one on the north bank and the other on the south bank of the river, but here a difficulty confronted them. How was the north sewer to

Size No. 8. Diameter 1 1/2 in. Tenfold the Durability of the ordinary so-called "best" sash lines at practically THE SAME PRICE. IT IS SPECIFIED by the Best Architects. IT IS USED by the Best Builders.

WM. E. PECK & CO. (Incorporated)  
8 BRADFORD AVENUE, LONDON.

be connected with the south sewer to enable the entire sewage to be passed on to the outfall works? The most feasible plan was the construction of a syphon under the river, and provision for carrying out this difficult operation was made accordingly. In order to provide an outfall, &c., for the sewage the Corporation had decided some years previously to purchase the Pigeon House Fort, which was then in the possession of the War Department. With the Fort, which was originally a hotel, built in 1790, and used by travellers between England and Ireland, the Corporation also acquired 60 acres of land for the purpose of constructing the pumping station, precipitation tanks, &c., necessary for the carrying out of the plans that had been drawn up.

Messrs. H. & J. Martin, Dublin and Belfast, secured the contract for the construction of the intercepting and branch sewers, the syphon across the Liffey, the low-level sewer; and Messrs. Pearson & Son, a London firm of contractors, were entrusted with the construction of the outfall works, &c., at the Pigeon House.

On the north side of the city the system takes its rise near the Infirmary Road in the shape of a pipe drain, which runs down to Parkgate Street, and thence enters on its course along the northern quays. On the south side there are several pipes emptying into the main drain near Island Bridge, one of them, 3 feet in diameter, carrying off most of the sewage of the Kilmainham district. The course of the sewer is then along the southern quays and *en route* several very large pipes empty into it, notably one running through the Patrick Street district. The upper part of the sewer at Island Bridge was constructed in the river-bed for a length of 600 or 700 feet on a concrete wall in order to avoid the property of the War Department. The extensions in the upper portion of the work involved the running of a pipe along the Camac river and a cast-iron syphon under the Grand Canal and the Midland Railway at Newcomen Bridge, on the North Strand Road. One of the tunnels was driven through the hard boulder clay at Bow Bridge, Kilmainham, and another was made through the limestone rock under the hill at Christ Church Place and Patrick Street.

When the two intercepting sewers had been brought, that on the north side to a point near Marlborough Street, from which an extension runs out in the direction of

Clontarf, and that on the south side to Burgh quay, opposite Hawkins Street, they were connected by the syphon constructed underneath the river. This proved a most difficult piece of work owing to the depth of boring required, and also the yielding character of the subsoil. An enormous amount of tunnelling work had to be done, and excavations made to a depth of 50 or 60 feet. Eventually, however, the difficulties inherent in any work of the sort were successfully overcome, and it must have been with a sigh of relief that the contractors were at length able to complete the junction of the two sewers. From Hawkins Street the sewer runs *via* Great Brunswick Street in a fairly straight line to the Grand Canal Basin. Here another tunnel had to be made, and it also became necessary to bore underneath the bed of the river Dodder. Throughout this stretch of the work the subsoil proved so treacherous that the ingenious mechanical appliance known as "the Greathead Shield" had to be utilised. This necessitated the use of compressed air, which was constantly pumped into the sewer at an enormous pressure to the square inch. The results obtained were very satisfactory, although the system involved considerable trouble. The men obliged to work in the tunnel, which was filled all the time with compressed air, had to be periodically examined by doctors, whose duty it was to see that their health did not suffer by the trying circumstances under which they had to work.

A huge chimney-stack is one of the striking features in the buildings forming the pumping station at Ringsend. The sewage will be conveyed to the station along the low-level sewer from Hawkins Street, and then pumped into the high-level sewer running from Ringsend to the outfall. At the station there are four very powerful pumping machines, capable of lifting 15,000,000 gallons to a height of 23 feet, and it is arranged that one of them shall always be kept in reserve. Four boilers of the latest pattern will supply all the steam required. The pumps have a working capacity of over 46,000,000 gallons per day, equal to over 5,000 cubic feet per minute, but if the stand-by plant is also utilised, 62,214,000 gallons per day, or 6,912 cubic feet per minute, could be dealt with. The precipitation tanks are at the Pigeon House Fort, and cover an area of, roughly, 1,000 by 100 feet. They are so constructed that

## IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the  
Coal Smoke Abatement Society  
In Conjunction with  
H.M. OFFICE OF WORKS,  
At the New Government Buildings in Parliament St., London.

### REPORT

(See page 25 of Supplement in Issue of June 8).

As a final result of the whole of the tests the Examiners find that of the  
grates submitted those of

**Messrs. CANDY & CO.**

and of two other makers are the best, showing practically equal results. The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear. N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

**Candy & Co., Ltd.**

Works: Heathfield Station, Newton Abbot, DEVON.

LONDON OFFICES: 87 NEWMAN STREET, OXFORD STREET, W.

the sludge will be easily and readily swept into a central culvert running through the tanks. The sludge after chemical treatment will be pumped into the high-level receptacle at the water's edge, from which it will be delivered into a special barge named the *Shanrock* for conveyance to the deposit area at sea, a point located six miles east of the Bailey Lighthouse. This distance has been insisted on by the Dublin Port and Docks Board in order to prevent the sludge being caught by the tide coming up the Liffey. The liquid sewage will also be chemically dealt with at the precipitation tanks, and discharged through the outfall works into the Channel. It will thus be seen that the ceremony which took place on Monday inaugurates a new era in the municipal life of Dublin, and it is to be hoped that one of the first benefits conferred by the new system will be an appreciable reduction in the present normal death-rate in the city.

### SOLVING THE DUST PROBLEM.

AN interesting experiment in the preparation of dustless roads is about to be carried out on three miles of the London to Portsmouth road through Esher, by a joint committee of the Roads Improvement Association and the Automobile Mutual Protection Association. A writer in the *Pall Mall Gazette* goes into the scheme in some detail, and remarks that the great value of the experiment over all others that have been made is that it will be carried out with different materials on a continuous length of road subject to the same traffic. In the past similar experiments have been isolated, and, as they have been subject in consequence to different conditions and different traffic, it has been difficult to get reliable information regarding the results. In the present experiment the three miles of road are to be divided into twelve quarter-mile portions, each of which, for the purposes of the test, is to be treated with different materials, according to the following scheme, although not necessarily in the strict order here stated:—

1. The first length will consist simply of the existing granite road, which has been recently repaired.
2. On the next length tar will be painted by hand, and the committee expect to find that it will not only lay the

dust, but also that it will help to fix the binding material and give the road a longer life.

3. The third length will be treated with taafelt, a patented material combining some of the properties of tar and asphalt. This will be laid about half an inch thick, and will have the effect, it is claimed, of waterproofing the road and providing a non-slippery surface absolutely free from dust.

4. Over the fourth quarter of a mile there will be a coating of  $4\frac{1}{2}$  inches of granite treated with taafelt.

5. The second mile will begin with a length of limestone quarrite, a patented material of which the promenade at Blackpool is made, treated with a preparation of tar.

6. On the next section granite quarrite, a somewhat harder material, treated in the same way, will be tried.

7. There will be at least one length of slag treated with tar, either the patented material known as tarmac, or that which has been used successfully on a portion of the Thames Embankment.

8. Another form of slag, a material known as Line's bitumenised slag, will also be tried and treated in the same way.

9. On the first section of the third mile Kentish ragstone will be treated with tar.

10. Then will come a material known in Germany as Kleinpflaster, which consists of small granite setts laid at random, so that the joints do not make a continuous line. This material has been found highly satisfactory in Germany, giving a road free from dust and hard enough to stand heavy traffic.

11 and 12. In addition, the committee are anxious to test two or three new materials, in which Trinidad Lake asphalt enters in various ways.

It is proposed to continue the experiment for seven years, and subscriptions are invited, it being estimated that a sum of 2,000*l.* will be required, towards which a contribution equal to the present annual cost of the road (about 200*l.* a mile) is expected to be received from the County Council. It is hoped to start the experiment in the autumn, and detailed reports as to cost and repairs required will be issued quarterly. It is contended that although the first cost is higher, dustless roads really mean ultimate economy.

### COOLEY'S PATENT DOUBLE DOWEL-PINS.

By this system each Block is securely fastened to its neighbour, and by means of the double-grip of each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.

For Wood-Paving purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of vibration.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The plan (if any) selected will be accepted subject to the approval of the Board of Education. **TRADE NOTES.**

In connection with the Tourists' Trophy Race, it is of interest to note that the Willesden Paper and Canvas Works, Ltd., of Willesden Junction, were again entrusted by the Automobile Club with the order for the supply of the scoring boards.

Mr. W. H. Godwin, of the Lugwardine Art Tile Works, near Hereford, has taken into partnership his son, Mr. Austin Francis Godwin, and Mr. Thomas Pickerill, many

years manager. The new firm has our best wishes for its success. The business will still be carried on under the familiar style of William Godwin & Son, to whom all accounts should be paid and by whom all debts will be discharged.

MESSRS. W. & R. LEGGOTT, LTD., of London and Bradford, manufacturers of locks, door furniture, window fittings, &c., in response to repeated requests by the local architects, have opened a show-room at 65 King Street, Manchester, where a large assortment of their manufactures will be on view and fixed for demonstrative purposes, and which the profession and their clients are invited to inspect. Messrs. Leggott claim that it is one of the finest selections of architectural ironmongery ever exhibited, and will be offered at such prices as will insure their consideration.

LOVERS of gardens on a large or small scale should know that a substance which is coming into much use lately for rockery purposes, ground walks, asphaltting, pebble dashing and other purposes of a like nature, is the celebrated spar and white spar, with which the name of Messrs. Geo. G. Blackwell, Sons & Co., Ltd., of Liverpool, is associated. The many uses to which rockery and gravel spar can be put in building and other operations render it of importance that it should be widely known that the Messrs. Blackwell, who are the largest producers of spar (from their own quarries and mines) in the world, are now in a position to execute orders to any extent.

PROFESSOR H. A. WOODRUFF, in the course of his introductory lecture at the opening of the new session of the Royal Veterinary College, Camden Town, said it was interesting to note the previous occupations of sanitary inspectors as given in a report to the House of Commons in 1898. In Battersea the inspectors consisted of four men who were plumbers by trade and three who were carpenters, whilst in Hackney the duty was carried out by a bricklayer, a builder's surveyor and a stonemason. A similar state of things existed in other boroughs, where the inspectors included compositors, bricklayers, stonemasons, school teachers and tram conductors.

**BUILDING AND BUILDERS.**

THE estimate of the architect, Mr. S. J. Adams, for the cost of erection of the new infants' school at Leigh-on-Sea is 2,950*l*.

TOWARDS the erection of the new secondary girls' school at Loughton, which is estimated to cost 8,000*l*., the Essex education committee have made a grant of 2,500*l*.

THE church of St. John, Leytonstone, is to be enlarged at a cost of 6,000*l*.; 480 additional seats are to be provided, making the seating accommodation 1,000.

THE building trade is brisk in Bognor, Sussex, especially in the west end of the town, where some good-sized residences are being erected.

LAND has increased to such an extent in value in Weston-super-Mare that a shop which was purchased freehold for 500*l*. some fifty years back has just changed hands at a cost to the purchaser of 5,000*l*.

At a recent conference of local authorities held at Grays, Essex, a resolution was passed in favour of a joint sewerage scheme for the five riverside parishes of Grays, West Thurrock, Little Thurrock, Stifford and Chadwell St. Mary.

THE East Ham education committee have decided that a clause shall be inserted in the contract for the erection of one of their schools requiring the contractor to employ at least two-thirds of local labour on the work.

APPLICATION has been made to the Westminster Licensing Bench on behalf of Messrs. Lyons for sanction of the plans for rebuilding the Royal Hotel, Rupert Street, W., they intend spending 50,000*l*. on it. The Bench approved the plans.

It has been decided that for the new county lunatic asylum to be erected at Colchester red brick, with artificial stone cornices, shall be used throughout; the internal fittings are to be plain, with yellow deal and pitch-pine floors. It is to be hoped that fireproof floors will be used throughout.

THE general works committee of the Coventry City Council have decided to recommend the Council to proceed with the erection of municipal offices and shops on the vacant land in Earl Street at an estimated total cost of 30,000*l*. Designs for such buildings were accepted some time ago.

THE Upminster Hall estate, which consists of some 700 acres, is about to be developed by Messrs. W. P. Griggs & Co., Limited, of Ilford, who propose to erect roomy villas, allowing a frontage of 60 feet to 70 feet, and where possible leaving all the existing trees, thus preserving the well-timbered and park-like appearance of the property.

THE following loans have been sanctioned by the Local Government Board for alterations to and erection of new schools in the county of Essex:—Hornchurch Council schools, building 2,258*l*., furnishing 134*l*.; Romford Council schools (Mawneys Road), building 5,148*l*.; South Weald Council schools, 3,791*l*.; West Thurrock Council schools, building 2,044*l*., furnishing 87*l*.; and West Thurrock (Purfleet) Council schools, building 1,650*l*., furnishing 88*l*.

THE Penge Town Council recently received a deputation from the Amalgamated Society of Carpenters and Joiners who called attention to what they described as "the unfair conditions under which certain workmen were employed by the Council." The men, it was stated, were employed at less wages and for longer hours than any others in the metropolitan area. The Council promised to consider the matter.

THE Montreal building inspector states that building operations in Montreal, Canada, this year show an increase over those of last year by nearly a million dollars, and still there are four months yet of 1906 to be accounted for. The total amount of work done last year was 5,590,698 dols., while up to the present of this year 6,510,485 dols. has been expended.

A SPECIAL meeting of the Bangor City Council considered a recommendation of the general purposes committee to the effect that the clerk, having reported that Messrs. Hughes & Stirling, Liverpool, whose tender for the erection of the Carnegie library had been accepted, had made mistakes in pricing out their bill of quantities, an increase of 100*l*. be allowed on the tender. The course was adopted.

THE Rochford Hundred education sub-committee are requesting terms for the appointment of an architect for the erection of the new schools at Rayleigh from the following gentlemen:—Mr. S. J. Adams, Messrs. Burles & Harris, W. Y. Hobbiss, Greenhalgh & Brockbank, Clarence Ross, Frank E. Smee, H. Leon Cabuche, Charles Cooke, Douglas

H. Smith and W. J. Wood. No mention is made of "Forms of tender may be obtained, &c." It should be interesting employment going through the applications, but a somewhat unprofessional and humiliating procedure for the gentlemen who have been asked to apply for the position.

THE Emigrants' Information Office warns persons against going to the Transvaal at the present time in search of work as the local supply of all kinds of labour is more than sufficient. The building trades at Johannesburg are bad, and large numbers of masons, carpenters, bricklayers, plasterers and others have left the country through inability to obtain employment. Owing to this exodus there is a large number of empty houses, which fact has the double effect of lowering rents and stopping further building operations. There is a similar scarcity of work in other trades which causes much distress. The cost of living remains very high. The same warning is applied to Cape Colony, where large numbers of Malays and other coloured men in all parts of Cape Colony now compete with whites as skilled mechanics at lower wages.

## ELECTRIC NOTES.

A POLL of the ratepayers of Bournemouth on the question of running the Corporation trams on Sundays between the hours of 2 P.M. and 10 P.M. resulted as follows:—For, 2,703; against, 3,606; majority against, 903.

A LOCAL GOVERNMENT BOARD inquiry was held at Malvern with reference to the District Council's application for sanction to borrow 4,500*l.* for extension of mains and other purposes in connection with the electric supply undertaking. Strong opposition was raised.

THE electrical engineer of Hanley has recommended a further extension of the generating plant in order to cope with the rapidly-increasing load and to adequately cope with the motive-power demand. The report has been approved, and steps will be taken to provide a new generating set.

THE new tramway section which was opened on the 27th ult. in the Worsley and Walkden districts makes it possible to travel by car from Deansgate, Manchester, to the Pier Head at Liverpool. The journey can be accomplished in about five hours. The route is by way of Deansgate, Swinton, Walkden, Moses Gate, Great Moor Street, Bolton, Four Lane Ends, Bolton, Atherton, Hindley, Haydock, St. Helens; thence via Eccleston, Prescot, Huyton and Roby to Knotty Ash, thence to the Pier Head. The charges made on the various sections bring the total cost of the journey to about half a crown.

THE town clerk of Stoke-on-Trent recently wrote to the Potteries Electric Traction Company on the subject of increasing the weight of the rails in the various tracks throughout the borough, the necessity for which was emphasised by Colonel Druiitt in his recent report to the Board of Trade on the working of the tramways throughout the district. In reply, the Chairman of the company declined to give any undertaking whatsoever as regarded the reconstruction of the whole of the track, and stated that the company would carry out such repairs as were necessary from time to time to keep the track in a satisfactory state of repair. It was decided to lay a copy of the correspondence before the Board of Trade, with a request that the Board would cause the company to remedy the present unsatisfactory condition of the track.

THE Lothians Electric Power Co. have made an offer for the lighting of Bonnyrigg by electricity, and the proposals have been remitted to the lighting committee of the burgh for full consideration. The company propose to erect ninety-four lamps, or more if desired, and keep them alight

# THE LEEDS FIRECLAY COMPANY, LTD.

London Offices & Showrooms: 2 & 3 NORFOLK ST., STRAND, W.C.

from the beginning of September till the beginning of April, between one hour after sunset and 10.30 P.M., amounting approximately to 1,000 lighting hours, for the annual payment of 25s. per lamp, on condition that permission be given to erect poles for the conveying of electric wires overhead for the lighting and for power purposes. The company say the scheme will entail a slightly greater annual expenditure to the Town Council than the system of gas-lighting at present in vogue, but at the same time the actual illumination would be increased by over 500 per cent.

THE Marylebone Borough Council electric supply committee recommend a scheme by which bonuses will be paid to the men employed at the generating station, with the idea of inducing them to keep down expenses. All men engaged in the actual generating of the supply will receive the bonus, which is to be paid on the actual works cost of units sold to mains, the repair cost of plant to be included. It is suggested that the scheme should be tried during the September and December quarters, in which period it is estimated the total units generated will be 4,500,000, of which 16 per cent. will be used on the works and 16 per cent. lost on the distributing system. The average cost per unit will be approximately .54 of a penny, but it is anticipated that with the bonus scheme in force this figure will be reduced to .44 of a penny. On the above estimate .100 of a penny would mean 1,900l., of which 200l. would be paid as bonuses according to a scale drawn up by the resident engineer—the lower the cost the greater the bonus.

An inquest was held at Derby on the body of a man who was killed while he was switching on an electric fan in the cellar at the shop where he was employed. The medical evidence showed that he was a strong, muscular man, and that death was due to sudden failure of the heart consequent upon an electric shock. Mr. T. P. Wilmshurst, chief electrical engineer to the Derby Corporation, said the voltage was only 200, and the regulation low pressure was 250. Mr. Gilbert Scott Ram, consulting electrician to the Government, who attended the inquiry on behalf of the Home Office, said that 200 volts was looked upon as quite

safe. It was his opinion that in a damp cellar certain precautions should be taken. The jury returned a verdict of accidental death, and recommended that the risks of portable fans and other electrical apparatus should be carefully considered, and any necessary warning issued to those using them.

THE Oxford City Council at their last meeting considered tenders for the electrification and reconstruction of the present horse-traction tramways. Two tenders had been sent in—one by the National Electric Construction Co., Ltd., who proposed to lay down the Dolter system, and the other by the Oxford tramways company, who gave conditionally the offer of three systems—the Loraine, the Griffiths-Beddell and the conduit slot. Mr. S. Sellon, of Victoria Street, Westminster, was consulted by the Corporation, and reported in favour of the Oxford company's offer. It was ultimately resolved, by thirty-two votes to ten, to accept the tender of the National Electric Construction Co., as, all things considered, it was the best, subject to the guarantees offered proving satisfactory, and also to an undertaking that, if the Dolter system did not prove satisfactory, the company would lay down another, and to such other modifications and provisions as might be required by the Corporation.

DR. J. F. WALDO held an inquest, at the City coroner's court, into the fire at 47 Holborn Viaduct on the 12th ult. One of the floors was used for sleeping accommodation for about eighty-five men. Several Fire Brigade officers commented on the insufficiency of means of escape. One said that the trap-doors were wrongly placed, and some of them were without ladders. The jury, in returning their verdict, gave as their opinion that the means of escape are not satisfactory, and steps should be immediately taken for the safety of any occupants in case of fire. They censured the employers for the neglect of proper instructions to and precautions for the safety of their men.

## VARIETIES.

THE cost of the new secondary schools at Maldon, Essex, will be 6,997/.

THE Norfolk education committee has decided to subscribe 50/ per annum towards the School of Forestry which it is proposed to found at Cambridge University.

MR. HENRY F. JOEL, A.M.I.C.E., has removed from 31 Wilson Street, E.C., to 110 Strand, London, W.C., where he will practise as a consulting electrical engineer and specialist on electric motor-cars.

THE new county lunatic asylum for the county of Essex will cost 418,228/. The plans have been passed by the Lunacy Commissioners, and it will be erected on the Severall's Estate, Colchester.

MR. W. D. CAROE was on Saturday sworn into the office of Master of the Plumbers' Company, and Mr. Adrian Pollock and Mr. Charles Hudson into the offices of Warden and Renter Warden respectively for the ensuing year.

THE Yokosuka Municipality of Japan have under contemplation the construction of breakwaters in the harbour at a cost of 100,000 yen (about 10,200/), for the purpose of facilitating the shipping trade.

THE Birmingham Playgrounds, Open Spaces and Playing Fields Society, which was inaugurated in June last, has offered to the Corporation four pieces of land measuring about 6 acres and valued at 8,000/, for use as open spaces by the children.

THE Finsbury Borough Council have decided to apply to the London County Council for a loan of 22,200/, for the purpose of acquiring new wharf premises, with a frontage to the Thames. It was agreed to give 15,200/ for the Bull Stairs Wharf, and spend 7,000/ in adapting it.

A REMARKABLE case of overcrowding in the village of Great Horkeley, near Colchester, has been brought under the notice of the sanitary authority. In a cottage, which has only one bedroom, reside a man, his wife and five children, yet the parents had taken in three children sent down by the "Fresh Air Fund" from London. The Board decided that the clerk should call the attention of the promoters of the fund to the matter.

THE Mayor of Battersea opened on Saturday an institute constructed by the Borough Council in Plough Road for the use of the poorer classes. The building includes a recreation-room, furnished with a billiard table, bagatelle tables and smaller tables for chess and reading; also a gymnasium, slipper-baths, a reading-room for children and a museum. The site cost 2,635/., the building 7,950/. he furniture 550/.

At a meeting on Monday of the Wednesbury Town Council satisfaction was expressed that plans for a considerable number of new houses had been approved, and it was said the continued activity of the building trade augured well for the town's future. As an indication of the need for the class of property which was being erected, it was noteworthy that the houses were frequently tenanted before they were finished.

THE contract for the foundations of the Singer building extension on Broadway and Liberty Street, New York, has been awarded to the Fountain Company. Mr. Ernest Flagg is the architect. The foundations will consist of thirty pneumatic caissons carried down to bed rock, an average of about 80 feet below the earth. It will be remembered that this building is to be carried to a height of forty-one storeys.

THE waterworks committee of the Coventry City Council are consulting Mr. Hawksley, engineer, as to probable sites for boring with a view to increasing the water supply of the city, and also concerning schemes for an increased supply that have been brought forward. It has been suggested that possibly the Birmingham Corporation might permit of Coventry taking a portion of their supply from Shustoke.

IN view of the growth of Evesham the Town Council have considered the question of augmenting the water-supply or increasing the present storage capacity. It is proposed to construct two additional covered reservoirs of two and four million gallons capacity respectively, making with the present capacity a total of six and a half millions. The estimated cost is 12,500/. A committee of the Council recommended that the smaller reservoir be carried out first.

THE master of the West Ham workhouse has drawn up a report, which is to be forwarded to the Local Government Board, showing that the labour yard last year resulted in a dead loss of 750/. At the present time there is in hand

700 tons of broken granite and 250,000 bundles of wood, for which there is no sale. He suggests that in the coming winter the Guardians should rent a large tract of land on which the men could be placed, and that they should be paid a fair wage in direct ratio to the amount and nature of the work preferred.

### THE ENGINEERING AND MACHINERY EXHIBITION.

THE Exhibition at Olympia, of which Messrs. G. D. Smith and F. W. Bridges are the organising managers, is a fairly representative one, and well worthy of a visit on the part of all who are interested, inasmuch as an opportunity is afforded of inspecting the various classes of machinery and appliances that are adapted to special businesses or requirements.

In the centre of the building an attractive feature is "Keith's patent electric water and air circulator," which has been lent by the *James Keith & Blackman Co., Ltd.*, and by means whereof air is circulated, humidified, cleansed and cooled within a comparatively short time.

We have only space to briefly mention a few of the many exhibits, and taking them in the order in which they occur there will be seen at the stand of *Messrs. Alex. Findlay & Co., Ltd.*, sections of pressed steel trough flooring plates suitable for road and railway bridges, fireproof buildings, &c., besides built steel columns, steel-pressed gutters, &c. *Cochran & Co. (Annan), Ltd.*, exhibit models and views of their well-known patent vertical multitubular boilers. The *United Kingdom Lighting Trust, Ltd.*, demonstrate the Kitson high-power system of oil-gas incandescent light, and the U.K. automatic air-compressing system of intensified gas-lighting, &c. At the stand of *Messrs. Merriitt & Co.* we noticed some sheet steel and expanded metal lockers, both open and closed type, and steel shelving. The lockers are used principally for providing employes with a place to keep their belongings in, &c.; they are also useful for various other purposes.

At the stand of *Messrs. B. J. Hall & Co., Ltd.*, are seen Hall's patent electric copier for taking photo-prints of

engineers' drawings, and a new rapid copying process, called "Ordoverax," besides a selection of drawing instruments, cabinets, drawing tables, &c.

*Recorders, Ltd.*, exhibit time recorders of all kinds for mechanically controlling various systems of time checking, and the "Magic" patent window balance. *Mr. F. L. Ames* exhibits a model of a dockgate bridge, a model of combined sleeping berth and portable couch, and a full-size specimen of a chimney-top for the cure of smoky chimneys. *Buck & Hickman, Ltd.*, have a very good display of representative American machine tools, adapted for a variety of purposes.

*Messrs. Charles Churchill & Co., Ltd.*, have also a selection of modern machine tools, all of which have been specially chosen either as worthy examples of the most approved practice, as marking some distinct advance in methods of doing work or as embodying interesting novelties of design or constructional detail. *Messrs. Easton & Bessemer, Ltd.*, have on view specimens of their horizontal as well as vertical steam-engines, and a circular saw bench with table to take saw 42 inches in diameter.

At the stand of *Joseph Richmond & Co., Ltd.*, we observed a working model of the "Richmond-Carey" patent automatic electric lift, and of a new patent automatic electric push-button service lift, &c. The *De Laitte Gas Machine Syndicate, Ltd.*, demonstrate the advantages of De Laitte's air-gas plant, which is automatic in working, always ready for work, affords a regular and constant supply, and complete evaporation at all temperatures. The *Sturtevant Engineering Co., Ltd.*, exhibit various types of standard fans for various purposes, besides the "Sturtevant" rotary blower, drying apparatus, and patent junction pipes, &c.

*Sir W. G. Armstrong, Whitworth & Co., Ltd.*, make a display of their 18-inch centre lathe and a vertical drilling machine under working conditions, illustrating the capacity of their high-speed tool steel for both turning and drilling. At the stand of *Messrs. J. Halden & Co.* we noticed the "Simplon" adjustable set square, which enables draughtsmen to draw easily and quickly any lines whether vertical or set at an angle; the universal drafting machine, and various modifications and adaptations for photo-copying machines and apparatus. *Messrs. Charles Wicksteed & Co.* exhibit their patent flexible shaft, electric tube expanding and drilling appliances, besides their new patent pipe-

bending machine, &c. *Messrs. Selig Sonnenthal & Co.* show their patent portable hand crane, with automatic extending and receding jib, which is of special advantage in warehouses where the head room is limited, and where it is necessary to lay down goods at different positions from the centre of the crane. This crane can be used with a much greater degree of safety than an ordinary crane, as it can be brought forward to a window or door in the warehouse wall and the jib shot out, and the load lifted and then pulled in again without the attendants having to go forward to the edge of the loop-hole. The *Walsall Hardware Manufacturing Company* make a display of their steel conduits and fittings for electric-light wiring, as well as of their patent interchangeable junction boxes and grip fittings. The *Simplex Steel Conduit Company, Ltd.*, exhibit the well-known Simplex steel conduit system for electric light and power wiring, including enamelled and galvanised steel conduits, fittings and accessories for the complete mechanical protection of interior electric circuits, as well as various types of electric-light fixtures, &c. The advantages of reproducing plans by "Velography" are demonstrated by *Norton & Gregory, Ltd.*; and working models of distinctive types of "Temperley" patent transporters for unloading and loading vessels and railway trucks and handling material, illustrating the modern method of saving labour, time and cost, are shown by the *Temperley Transporter Company*; while impregnable foundation felt and fire-resisting hair felts are to be seen at the stand of *Mitchells, Ashworth, Stansfield & Co., Ltd.*

Special interest attaches to the patent heat distributor shown by *Mr. J. D. Prior*, of Birmingham, for heating bedrooms with the waste heat from the sitting-room fire. This apparatus is made of gun-metal and solid drawn copper tube of a peculiar section and bent in a special manner. It is fixed at the back of an ordinary open fire-grate (say in the sitting-room), and is used for warming bedrooms, halls, &c., by means of hot water circulating through radiators, pipes, &c. The peculiar formation of the heat distributor causes it to extract the waste heat from the back of the fire and the throat of the chimney.

Lastly we would mention that at the stand of *J. H. Heathman & Co.* may be seen specimens of their well-

known fire-extinguishing appliances, fire escapes, extension ladders, &c., which, as well as many other exhibits, are worthy of attention.

### THE FARNHAM PATENT PROCESSES.

THE building illustrated, No. 116 Fenchurch Street, E.C. which was built about fifty years ago of Portland stone on the ground floor and Caen stone above, has just been subjected to the above processes, which not only give a renovated aspect to it, making it, in fact, to appear quite new, but a fresh and extended lease of life has been afforded by means of the adoption of the firm's method of preservation, which is both efficient and simple. The façade, we may mention, was previously treated in or about 1892, and again about 1893, by different so-called preservative processes of a superficial character which proved utter failures.

The building is a large and important one (occupied on the ground floor by the Union of London and Smith's Bank, Limited), owned by Mr. G. Croshaw, who decided to employ the Farnham processes, which have been carried out in a very satisfactory manner under the supervision of Mr. Alexander R. Stenning, F.R.I.B.A. These consisted first of all of sand blasting the stone for the purpose of removing all the rotten material. The sand blast was operated by an air-compressing machine, with a pressure of 30 lbs. to the square inch, which directed with great force a stream of very sharp sand. The waterproofing process was next employed, which consists of heating the stone surface by means of a Salamander charcoal stove, so as to get it at a high temperature in a favourable condition to absorb molten paraffin wax, and when the stone has taken in all that is possible of this material, which penetrates to a considerable depth, thus giving it not merely a coating but filling up the pores with the solidified wax that remains there under all conditions, it is impossible for moisture to gain access to the stone. The sand blast was then once more employed to remove the surplus wax and clean the surface so as to remove all traces of the waterproofing,

and now the building presents an entirely natural appearance, as though just newly finished from the hands of the builder, except, of course, the carvings and mouldings have lost their sharpness of outline during the many years in

which the stone was unprotected from the decaying influences of the atmosphere.

It is important to remember that paraffin wax being an inert material cannot be affected by the action of acid or alkali, and therefore when all the pores of the stone are filled with this material it follows that the surface is per-

manently waterproofed, and as none of the deleterious chemicals held in suspension by the London atmosphere can penetrate the stone, decay is absolutely impossible after the treatment.

There is an interesting though secondary advantage arising from the treatment; the pores of the stone being permanently closed cannot absorb moisture, and therefore all subsequent dirt deposits remain on the surface, so that heavy rains, which carry the dirt into the pores of untreated stone, wash such deposits from the surface of a waterproofed building, with the result that a building when treated by the Farnham wax process will retain its natural colour years after a new building has been begrimed and disfigured by soot deposits.

There are a vast number of buildings in London and elsewhere, we will add, which might with advantage be subjected to the processes referred to.

### THREE ECONOMICAL BOILERS.

The advantages of steam and hot-water for heating are becoming more known, and in England, as in America, practical engineers are endeavouring to remove the objections which have been raised against such applications of heat. It is necessary for an apparatus to be efficient and expeditious in raising temperature, but economy of fuel is also essential. The patent boilers of George Cotton & Co., Ltd., have been devised to meet the desired conditions. They are adapted for extensive as well as limited installations. The "New Tray Boiler" is suited to the requirements of glasshouses and conservatories. It is made in sections or units, and is easily erected and handy to clean. For all kinds of public buildings or private use the "Non-Equal Sectional Independent Boiler" can be utilised. For this boiler there is no necessity of a stand for it to rest on. This is a decided improvement, as the stands in sectional boilers are liable to crack or burn away after a few years' wear. Another advantage in this boiler is that there can be no uneven contraction and expansion, as the water encircles the fire and the whole of the flues are surrounded by water. The "Inner Flued Non-Equal Trentham Boiler" belongs in principle to an old class which is still

largely used. It is, however, modernised throughout, and is trustworthy and durable. The old method of setting them in brickwork is superseded. Instead of external brick flues to conduct the hot gases underneath and along the

outside shell of this boiler, all the flues of the Cotton type are internal, and made either circular or of sets of tubes, which direct the heat three times through the interior of the

boiler before it escapes up the chimney-stack. The outer casing of the boiler is covered with non-conducting material, and practically no heat is lost. The boilers have, moreover, the advantage of being easily cleaned.

#### SOCIETY OF ENGINEERS.

At a meeting of the Society of Engineers held at the Royal United Service Institution, Whitehall, on Monday evening, October 1, Mr. Maurice Wilson, president, in the chair, a paper was read on "Recent Practice in Cane-Sugar Machinery," by Mr. Perry F. Nursey, past president.

A typical West Indian windmill sugar estate was

described, after which the author entered upon the consideration of the question of central factories. That system, he observed, constituted the most important advance of modern times as regarded the general condition of sugar production, central factories having proved most successful, especially in connection with small estates. They were alike satisfactory to the owners of such estates, who sold their cane crops to the factory companies, and to the latter, who made the sugar and placed it on the market.

The author next described the Antigua central factory, the inception and inauguration of which were mainly due to the untiring exertions of the Hon. Francis Watts, C.M.G. It was erected and fitted under contract by the Mirrlees Watson Company in 1904, and the author pointed out that the report of the directors of the Central Factory Company for 1905 showed that the working of the factory for that year resulted in a net surplus of 3,956l. 9s. 8d. This result was obtained notwithstanding a prolonged drought; a saving point, however, was the somewhat advanced price of sugar during the early part of the year. The author then submitted a detailed specification of the plant and machinery of the Antigua factory, the cost of which, inclusive of several miles of light railway connecting up the various estates with the factory, was 42,408l. The factory was handed over under steam to the company by the contractors within eleven months of the acceptance of the contract, and was publicly opened on December 19, 1904.

The author afterwards described a modern Cuban central factory as erected and fitted by D. Stewart & Co., Ltd., and he concluded by stating that the Harvey Engineering Company had carried out contracts for no fewer than nine central factories in the East during the past five years.

#### HENLEY BRIDGE.

A REPORT has been prepared by Mr. Griffiths, engineer to the Thames Conservancy, respecting the condition of Henley Bridge. He says:—"On inspecting the foundations of No. 3 pier I was able to ascertain more definitely than heretofore the general conditions of the timberwork. It appears as far as I could see that the timbers in the platform run

longitudinally under the main pier and transversely at either end under the cutwaters. I was able to get my arm underneath the timber at a point after the chalk rubble had been cleared away, and found that the decking was originally 10 inches in depth. The outside timber of all has wasted away (in section), and timber at another point had washed away appreciably, and what was originally 10 inches in depth is now only 5½ inches. Until more rubbish is cleared away from around the foundations it cannot be decided how great a space there is between the underside of the timber decking and the gravel bed. It seemed to me the space was of about 1 foot 6 inches. There are two courses open to the committee: firstly, to clear away the chalk rubble and then put in a concrete toe round the foundations as has been done in the case of No. 2 pier; and secondly, to excavate to a depth of about 2 feet 6 inches below the top of the decking, then clear out all the soft material from under it by either air or water pressure, and afterwards fill in the space with concrete and grout, to be well rammed in. It is for the committee to decide which of these two courses they will adopt, but it is obvious that the latter will be the most permanent, and I would impress on them how the scouring and wasting action has reduced the length of the timbers which are exposed and on which the whole structure depends. No. 2 pier.—A portion of the concrete toe has been put in round this pier, but in view of the facts that have come to light about the timbers of No. 3 pier it would be advisable before any more concrete is put in that the diver should lay bare a portion of the timber foundation in order to ascertain its condition."

#### THE WALWORTH SETTLEMENT.

At the meeting of the Church Congress in Barrow on Tuesday, a paper was ready by the Rev. W. J. Conybeare on housing. He said of all our social problems none was so full of hope as the question of the housing of the working classes. So much of a practical nature had already been done, that we might almost say that we had passed through the experimental stages. The best known example of private effort was that of Mr. Cadbury at Bournville, but in Barrow they could see for themselves Vickerstown, the

name of which revealed its origin. There was also that interesting experiment of private effort which was taking shape in the "Garden City," near Hitchin. He would give an example of an effort made by the Ecclesiastical Commissioners. In 1903 the leases of 22½ acres of Church house-property in Walworth fell in. It was then what is commonly known as a slum. For months those dismal streets looked like those of a bombarded town; the windows were broken, the doors boarded up preparatory to the operations of the housebreaker. Now a model town of 790 families had arisen on this same area. Three broad streets in place of four narrow ones had been made. Four public-houses had been closed. An acre and a quarter of land had been set apart as a recreation ground. Each row of houses had been built with some peculiar design of its own, so as to remove that painful monotony which made the common "bow window and door" design, of which there were scores of miles in nearly every large town, so deadening to the sense of individuality. Many kinds of houses had been set up. No longer those so-called model dwellings, the experiment of twenty years ago, countless storeys high, with dark, steep staircases, but cottages, cottage flats and tenements with never more than three flights of stairs. Each cottage and cottage flat had its own private garden, and the tenements had a large back yard, along the sides of which flower beds were laid out and well kept by the tenants. The weekly rents ran from 11s. for a five-roomed cottage to 4s. 4d. for a two-roomed tenement, to which must be added the variable weekly rate, averaging about 3s. the cottage and 1s. 2d. for the tenement. Only those of good character were accepted as tenants. But a visit to the Walworth estate naturally gave rise to the question, Where had the former tenants gone? Were they now making a slum elsewhere? To such questions there was no satisfactory answer. To counteract this evil an attempt was now being made in Camberwell, to quote South London again, where the Borough Council had bought up some of the worst houses, and, instead of dishousing the people, had improved the houses as they stood with better wall-papers, better light, better water supply and cooking arrangements, and more sanitary accommodation. The difficulty was to secure appreciation of the reform and the right use of the additional conveniences.

## Are you interested in WOOD PRESERVATION?

Apply to the ANTHROL Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of ANTHROL and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. ANTHROL does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, ANTHROL, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

Liverpool and Manchester.

# VELURE

VELURE

## WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable. Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

**WORTH**  
ONE GALLON  
WILL COVER ABOUT  
90 SQUARE YARDS

**TRYING**

## WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.

**Architects say Preferable to Enamels.**

We have for some time specified your Velure in preference to enamels, with satisfaction to ourselves and our clients.

FRANK H. SHAYLER & THOMAS RIDGE,  
Architects & Surveyors,  
Bank Chambers, Oswestry.

March 20, 1906.

Takes but little space, and is readily removed.

## AUTOMATIC FLOOD TRAP

Murray's Patent, No. 23260.

**THIS GULLY TRAP** provides means whereby, in the event of a sudden back flush of water in the drains, the Gully is automatically sealed from the interior and the water in the drains prevented from escaping through the inlet of the Gully.

### ADVANTAGES.

Gully can be fixed without touching the drains.  
The working parts are very simple and cannot get out of order.  
The Gully can be cleaned out without moving anything.  
The working parts are made of noncorrosive metal.  
The trap is self-acting.

**Price complete - - 24/-**

SOLE MAKERS—

Is the Leading Daily Paper North of the Forth, and the Leading Commercial Paper in Scotland, out of Glasgow.

**PRICE ONE PENNY.**

## THE PEOPLE'S JOURNAL.

SCOTLAND'S NATIONAL NEWSPAPER. It enters more homes in Scotland than any other Newspaper. Weekly: One Penny.

Publishers:—JOHN LENG & CO., LTD., DUNDEE, and 186 Fleet Street, LONDON.

## THE Wiltshire County Mirror and Express.

**Established 1833.**

The best Newspaper and Largest Circulation in South Wilts.

The only Official Organ for the County in South Wilts.

Published on Fridays and Tuesdays.

**Price 1d.—56 Long Columns.**

Proprietors: **EDWARD ROE & CO. THE CANAL, SALISBURY.**

## THE NORTHAMPTON MERCURY

(With which is incorporated the *Northamptonshire Guardian*, the *Northampton Weekly Reporter*, and the *Daventry Spectator*).

Oldest and leading County Newspaper, comprising 8 pages (64 long columns). Price 1d. Established May 2, 1720.

Circulates extensively throughout the town and county and in the adjoining counties of Bedford, Buckingham, Huntingdon, Leicester, Lincoln, Oxford, Warwick, Cambridge, &c. Published Fridays at 4.0, 5.20, and 6.45 p.m. Price per news post, 1s. 8d. per quarter prepaid; 2s. booked.

### The Northampton Daily Reporter.

Oldest and Leading Daily in Northampton and District, comprising 4 pages (24 long columns). Price 1d. Established February 9, 1881.

Published daily (at 3.30, 4.0, 5.20, 6.15, and 6.45 p.m.), Fridays excepted. Price per news post, 5s. per quarter prepaid 5s. 6d. booked.

These journals have the largest circulations, and are the recognised Organs of the Boot and Shoe Trade.

## THE LLANGOLLEN ADVERTISER, Denbighshire, Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years, has a very large and influential circulation throughout North Wales. Being conducted entirely on neutral principles, it finds its way into families of all classes. As it is also the only paper printed and published in this district, it offers peculiar advantages to advertisers.

**HUGH JONES**, Castle Street, Proprietor.

**SOUTH WALES DAILY NEWS.**—Pre-eminent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**SOUTH WALES ECHO.**—Eight editions daily, 36 columns, 1d. One of the largest and most attractive evening papers in the provinces. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together.—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**CARDIFF TIMES (Weekly, 1d.)**—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2d. to a 1d. paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

No. 549.—3 ft. 6 in. Inlaid Mahogany Bedroom Suite, Sheraton Design, £10 10s. "QUARTERING, LONDON."

## THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

## HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

For Simplicity and Efficiency their Closet stands alone.

Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

## ITS ADVANTAGES ARE:-

- 1st. The simplicity, strength of the mechanism, and non-liability to get out of order.
- 2nd. It is self-acting.
- 3rd. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells.
- 4th. The large capacity of the containing magazine holding the earth or other deodorising material.
- 5th. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

**The feature of their Constructional Work is Soundness and Stability, combined with Rapidity of Execution.**

In Waring's vast New Building, recently opened, there are Departments for everything in connection with either Contract or Private Work, and Architects may be assured that their wishes will be faithfully and carefully carried out by efficient workmen under expert supervision.

Waring's manufacturing resources enable them to satisfy Architects' requirements at the lowest tender prices.

Telephone No. 4725 Holborn.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\* \* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The plan (if any) selected will be accepted subject to the approval of the Board of Education. Particulars can be obtained on application to the Secretary, at the County Education Office, 57 London Street, Norwich.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

**CONTRACTS OPEN.**

### A NEW INVISIBLE HINGE.

ONE of the novel features of interest to the architect, engineering world, builder and cabinet-maker at the Engineering and Machinery Exhibition, Olympia, is a new and an invisible hinge. This new hinge is shown upon Stand 115, and has already commanded a large sale with the Pullman Car Company and railway companies. It is claimed that the Soss invisible or pinless hinge entirely supersedes the old pin hinge. The new hinge gives an absolutely tight joint, and when open does not leave a wide gap or crack between the woodwork. This hinge is eminently suitable for all high-class work, such as doors, trunks, cases, pianos, doors of automobiles and railway carriages, &c. It is of simple construction and is made in three pieces only, and when fitted is absolutely invisible and altogether different from the old-fashioned protruding butt hinge.

THE Mayor of Dover has been surcharged 401*l.*, the amount of interest on money borrowed to purchase the Barton Road schools. The auditor's ground for making the surcharge is that the money was borrowed before the approval of the Local Government Board had been received. The Mayor's explanation is that the Local Government Board did not give their assent for nine months, and it was necessary in the meantime to acquire the schools, the purchase of which was approved by the Education Department.

THE Horsfall Destructor Company, Ltd., have just completed several important destructor plants, including, at Falmouth, a power plant for Messrs. Crompton & Co., Ltd. (general contractors for the Corporation electricity scheme), in which the refuse is to be used to generate electric light and power for tramways; and a very important plant at St. Petersburg of eight high-capacity cells, in which the new "Horsfall" patent system of "mechanical charging" has been embodied. In this system, which is in full operation at Leeds, the objectionable handling of the refuse by workmen is entirely done away with and a very large saving effected on the working costs. The company has also recently shipped destructor plants to Perth, Western Australia, and Singapore, and has in hand a 4-cell "back-feed" plant for Dunoon, on the Clyde; a 2-cell plant at Kingstown, co. Dublin; and a "mechanically-charged" plant at Newcastle-on-Tyne. The last-named has been somewhat delayed by extra work in the foundations, which the company are carrying out in concrete piles. The company have also in hand the extension of the "Horsfall" destructor at Stourbridge.

## TRADE NOTES.

A LARGE clock, with four illuminated dials, striking the hours and chiming the Westminster quarters, has just been erected in St. Paul's Church, Widnes, by Messrs. John Smith & Sons, Midland Clock Works, Derby.

## ELECTRIC NOTES.

THE Folkestone Corporation have obtained the consent of the Earl of Radnor, the lord of the manor, to the new marine promenade, on condition that electric light is used.

THE Madras Government have sanctioned the installation of electric light and fans in the Guindy residence of the Governor of Madras, at a cost of 4,000l.

THE London County Council having intimated their intention to instal the overhead trolley system on a portion of the route covered by the northern tramways, the Islington Borough Council have passed a resolution adhering to their decision that none but the conduit system should be adopted.

THE Watford Town Council intend to apply for sanction to borrow 13,500l. for improving the electric-light undertaking. A sum of 80,000l. has already been laid out on the scheme. At the forthcoming Local Government Board inquiry a majority of the Council will oppose the loan.

THE Manchester City Council adopted a recommendation of the tramways committee to confine the parcel-carrying operations of the department to the area of the tramways. The loss last year was nearly 6,000l., and there was a prospect of at least 4,000l. loss per annum in the present and succeeding years. The difficulty lay in the decision of Mr. Justice Farwell that the Corporation could not act as common carriers—could not, in fact, convey any parcels that were not actually carried on their tramways for at least some portion of the journey. An amendment to discontinue parcel-carrying altogether was rejected.

CUTTING structural steel beams and girders by the electric arc has been carried on in clearing away the debris and wreckage resulting from the fire at San Francisco, Cal. For this purpose a current of about 250 amperes, at from

22 HOLBORN VIADUCT, LONDON, E.C.

90 to 100 volts, was supplied to the electrodes through long flexible cables by a 25-kw. direct-current generator mounted on a truck and driven by a 40 horse-power single-cylinder gasoline engine. The use of a voltage higher than that ordinarily used in the electric arc was found an advantage in that the arc is thereby rendered less susceptible to the influence of the wind. Remarkably satisfactory results were secured, a 15-inch I-beam being cut in two in about 20 minutes, whereas to cut a beam of this size with a hacksaw would have required several hours. This method of cutting is specially adaptable to inaccessible places.

The City of Birmingham electric-supply department announce that in connection with the official opening of the Summer Lane generating station on the 10th inst. the works will be open to the public on October 13, 15, 16 and 17 between the hours of 2 P.M. and 10 P.M. A part of the works will be utilised for the exhibition of electrical appliances, and apparatus will be on view showing the use of electrical energy for lighting, power, heating and medical purposes. A working exhibit will show the process of manufacture of incandescent electric lamps, and the latest types of arc, incandescent and mercury vapour lamps will be shown. The generating plant is divided into two sections, one section supplying low-tension current for local lighting and tramway load, the second section generating high-tension current, which is transmitted to sub-stations in various parts of the city, where it is transformed down to the pressure required for tramways and public supply in these areas. Sub-stations have been erected at Saltley, Bordesley, Parker Street, Court Road and Dudley Road.

A CONFERENCE was held in the Durham Miners' Hall on Saturday to discuss the county electrical and other municipalisation questions. The Miners' Council unanimously agreed that "This conference of workers in the county of Durham, having watched the progress of the discussion in the Durham County Council for the past three years upon the subject of the municipalisation of the electric services of the county, desires to record its hearty approval of the public ownership of such schemes as (1) for public and private lighting; (2) for trams and light railways; (3) power for industries, particularly in view of the extended and increasing use of electricity in the working of coal-mines, which was bound to have a very important bearing on

wages and working conditions of mine workers in the future. Therefore, we desire to urge upon the County Council to (1) arrest the further inroads of exploiting companies; (2) to frame and promote a public scheme of electric service in all branches for the county of Durham; (3) as early as possible to promote measures to buy up existing electric companies in the county as a means of having one unified scheme of service for the county; and (4) that all schemes be prepared by qualified experts."

### BUILDING AND BUILDERS.

As a result of the efforts of the Newport sanitary dilapidated houses committee the town clerk has been instructed to submit a draft by-law to insist of a bath being provided in each new house erected in the borough.

AN instance of how land has increased in value in Portsmouth was mentioned at a recent municipal election meeting. Some years ago land near Fratton Bridge was sold for 40l. an acre. Recently a local builder purchased it, including the value of the clay for brickmaking and the land for building purposes, at the rate of 3,000l. an acre.

THE Birmingham Trades' Council on Saturday agreed to the following resolution proposed by a representative of the wood and stone carvers:—"That the Birmingham City Council be urged to adopt the following:—'That on all undertakings comprising several different branches of industry each branch be tendered for separately, where practicable, the whole to be carried out under the supervision of the city surveyor or officer appointed by the Council, and sub-letting shall not be allowed. The contractor shall pay the trade union rate of wages current in the district in which such work is executed, provided that such rate is not below the trade union rate of Birmingham.'"

THE Croydon Town Council have refused a request by the housing committee for authority to bring up plans and a scheme for building more municipal cottages on the Woodside land, where there are already eighty-six houses. It was shown that though the original houses were built in compliance with an agitation to provide houses for the working-classes of Croydon, tenants had to be taken from London to fill them. Among the present tenants are

"independent gentlemen," "travellers," an "organ builder" and a "retired engineer." A motion for the insertion of a trade-union rate of wages clause in all contracts was also defeated.

THE public works committee of the Smethwick Town Council reported recently that they had considered the question of the proposed amendment of the by-laws as to the height of rooms intended to be used for human habitation, and were of opinion that a minimum height of 9 feet in ordinary bedrooms in a district like Smethwick was extremely desirable from a health point of view, and they therefore recommended that the Local Government Board be again approached upon the subject. They also recommended that the Local Government Board should be asked to sanction a by-law to the effect that in every dwelling-house having three or more rooms above the ground floor at least two of such rooms should be constructed so that they should be in every part 9 feet at the least in height from the floor to ceiling.

LAST year the Glasgow Corporation rejected a proposal to consider the expediency of establishing a works department. At the meeting last week notice was given of the following motion:—"That the resolution of October 26, 1905, in reference to the establishment of a works department, be rescinded, and in place thereof the following motion be adopted:—That it be remitted to a special committee of the Corporation to consider and report on the expediency of instituting in the public interest, where practicable, a works department of the Corporation, whose committee shall be charged with the duty of carrying out the work that at present is executed for the Corporation by private contractors."

THE Birkenhead Town Council received formal sanction from the Local Government Board to the borrowing of 3,680*l.* for the erection of nine double-tenement dwellings on the east side of Egerton Street and the provision of a playground in connection therewith, in part satisfaction of the requirements of the order confirming the scheme of 1901. The persons to be rehoused under the Birkenhead improvement scheme, 1901, numbered 420. In Getley Street sixteen dwellings had already been erected to accommodate seventy-two. In Getley Street twelve tenements, already

erected, accommodated thirty-six. Excess accommodation in Mason Street already erected was thirty-nine. The houses to be erected in Egerton Street would accommodate eighty-one, which made a total of 228, which left 192 persons to be accommodated or rehoused.

BANGOUR Village asylum which was opened on the 3rd inst. by Lord Rosebery, is laid out on the segregate system. It has a present accommodation of about 750 patients, but is capable of great expansion. It consists of a series of villa residences of small and varying dimensions, no two alike either in outward form or interior arrangement and decoration; an administrative block and a church, hospital, laundry, farm, electric-power station and other buildings scattered over a wide expanse of hill pasture land. The estate acquired for the purposes of the institution is 800 acres in extent. Of these 150 acres are built upon, 500 acres are under grass, and the remainder is arable land, most of which will be used for the growing of potatoes and oats. To a large extent Bangour asylum will be self-contained. A water supply was obtained on the estate, and the reservoir is sufficient for the storage of 16,000,000 gallons of water. In the power station is machinery equal to the provision of electrical energy to the extent of 400 horse-power. The architect is Mr. Hippolyte J. Blanc, of Edinburgh.

THE harbour committee of Kirkcaldy Town Council have approved plans submitted by the engineers, Messrs. Rendel & Robertson, for the further extension of the harbour and dock. The scheme consists of (1) a dock formed partly on the site of the present dock and commercial part of the harbour, and partly on the sands immediately outside them; (2) a south pier built on and partly outside the south pier of the parliamentary plans; (3) further extension of the east pier for a length of 50 feet; (4) construction of a spur 30 feet long to the east pier, inside of it, opposite to the end of the south pier, and (5) a tidal basin forming a protected approach to the dock. The engineer's estimate for this work is 78,610*l.*, while the contract for the extension of the east pier at present being carried out by Messrs. C. Brand & Son, Glasgow, is 26,000*l.* Sir Alex. Rendel strongly recommended that the contract for the new work should be placed in the hands of the

present contractors, Messrs. Brand & Sons. The committee recommend the Council to accept the advice of their engineer, and place the whole contract in the hands of Messrs. Brand at prices which had already been privately submitted to the engineer. A plan was also submitted for a graving dock to cost 10,000*l.*, but it was decided to delay the matter for further consideration.

## VARIETIES.

THE Mersey Docks and Harbour Board contemplate the provision of training walls so as to prevent silting-up at the mouth of the river.

THE reconstruction of the South Parade Pier at Southsea is to be commenced by Messrs. Thorne & Sons as soon as possible and to be completed in seven months. As the previous structure was burnt down fireproof decking will be employed.

DR. R. W. JOHNSTONE, Local Government Board inspector, held a public inquiry at the Birmingham Council House concerning an application by the City Council for sanction to borrow 3,000*l.* for the erection of a mortuary in Newton Street.

THE Warrington Town Council have agreed that the Mayor be indemnified in actions pending against him and

the Corporation for the performance of an agreement signed by him in the name of the Corporation, purchasing a mill for 8,000*l.* for street improvements.

"High Temperatures and Modern Industry" is the subject of a very instructive article in *Harper's Magazine* for September, which also contains among much other reading matter and a wealth of illustrations, a disquisition on "The University of London," by C. F. Thwing, LL.D.

THE Aberdeen Town Council, previous to adopting a recommendation that application should be made to Parliament for powers authorising the drawing of a new water supply from the river Avon, have carried out inquiries as to the condition of the present supply. It was found that serious pollution by the overflow of sewage is occurring.

THE Manchester promoters of the garden city movement have secured the option of purchase of an estate containing between 700 and 800 acres within a distance of about five miles from the Manchester Exchange. It is proposed to establish a garden city with a capacity for about 30,000 population.

THE streets and buildings committee of the Edinburgh Town Council have under consideration a report as to the extension of the sea wall at Joppa from the burgh engineer, showing a sea wall, promenade, shelter and gardens; the promenade to be 20 feet wide, the gardens 20 feet wide and 10 feet for a footpath, and the sea wall to be of cement and concrete. The estimated cost is between 7,000*l.* and 8,000*l.*

THIS week's *Commercial Intelligence* will contain a coupon giving free admission on Saturday, October 13, to the Engineering and Machinery Exhibition now open at Olympia. In order to enable the working engineer and apprentice in the provinces to take advantage of this offer, special trains have been organised to London on that day from Lincoln, Leicester, Nottingham, Loughborough and other stations.

At the last meeting of the Salford Corporation, Mr. J. Corbett, the burgh surveyor, submitted a scheme for enlarging the town hall, possible if certain land was acquired. Mr. Corbett stated that if a more spacious and convenient site could be obtained at a reasonable cost it would be ultimately more economical to build an entirely new town hall. The proposal was finally rejected.

## THE LEEDS FIRECLAY COMPANY, LTD.

Head Office: WORTLEY, LEEDS.

TERRA-COTTA

CAPITAL.

London Offices &amp; Showrooms: 2 &amp; 3 NORFOLK ST., STRAND, W.C.

THE Swansea Harbour Trust at their last meeting favourably considered a proposal to extend the scheme now in course of completion at a cost of 1,500,000/. There is a demand for more ample dock accommodation, so it is suggested to increase the capacity of the King's Dock by 25 per cent. If the work is commenced before the other contract is completed it could be carried out for 100,000/., as against 250,000/. if at some indefinite future time.

THE board of management of the Wolverhampton and Staffordshire General Hospital desire to raise 10,000/. in order to build a nurses' home and to improve the existing hospital. It is proposed to build, on ground close to the hospital, a modern and comfortably-appointed nurses' home, which will provide bedrooms for about fifty nurses, and also provide a dining-room for them.

THE Bournemouth Town Council have received intimation that the Local Government Board will, subject to the Board of Trade's approval being obtained to the works, so far as they are below high-water mark, sanction a loan of 18,000/. for the purposes of constructing an undercliff drive and works of cliff protection there. The Council have decided to obtain tenders for the work, so that facilities might be given for finding employment for the unemployed in the borough during the winter months.

SIR JOHN WOLFE BARRY, the engineer, who resides in Perthshire and who is a motorist, has written to the clerk of the highways committee of the Perth County Council that it would be safer for motor traffic and for general users of the roads of the county if the hedges were cut down so that a better view could be obtained of approaching traffic. The hedges were often unnecessarily high, and Sir John suggests that they be cut down to a height of 4 or 4½ feet.

An arrangement has been made with Messrs. Czeczowiczka & Son, builders, of Prague, for the erection at Andrychow, Galicia, of a large cotton-weaving mill, with a capital of two million Austrian crowns. The authorities are assisting the enterprise by (1) giving the necessary site free of cost, (2) freeing the factory from all national taxes for twenty years, and (3) advancing a loan of 400,000 crowns free of all interest for a period of five years; after that date the loan will be repayable within thirty years at 2½ per cent. interest.

THE Local Government Board are to be asked to sanction the following loans for the following elementary schools in the county of Essex:—Great Bursted Council school, enlargement, 1,278/.; North Fambridge, enlargement, 184/.; Leigh-on-Sea, site and school, 3,716/.; Chadwell Heath, new buildings, 4,055/.; Chadwell Heath infants', enlargement, 1,441/.; Wanstead, site, school for 1,138 children, manual training and cookery centre and caretaker's house, 17,563/.; Woodford Bridge and Ray Lodge school, expenditure in excess of loan of 18,222/., originally borrowed, 1,457/.; total, 29,694/.

THE Lea Conservancy Board are urging the Epping Rural District Council to avoid the pollution of the Lea by introducing a new system of drainage at Roydon. The Council take the view that any expenditure in this connection would be largely for the benefit of London water consumers. They are also of the opinion that the present law operates most unfairly upon the local authorities in the Lea Valley, and that any expenditure upon river purification beyond what the Rivers Pollution Act demands should be borne by the Metropolitan Water Board.

A CONFERENCE of the various governing bodies of Glamorganshire was held at Neath on the 8th inst. to discuss the subject of the preservation of Welsh water for the people of Wales, and especially the water of South Wales for the people of South Wales. After some discussion it was resolved:—"That this conference is of opinion that the Glamorgan County Council should engage an expert or experts to prepare a report as to the best method of dealing with the present and future water-supply of the administrative county; and that when such a report is prepared a further conference shall be called to consider the report under the powers of the Glamorgan Water Act."

DR. MACNAMARA, M.P., recently addressed a letter to the Prime Minister drawing attention to the "unjust incidence of the burden of local rating" in London, and inquiring whether the Government propose to prosecute with promptitude the Bill for the further equalisation of rates in London promised by the King's Speech of February 19. Sir H. Campbell-Bannerman, in reply, said:—"Although the Government have not found it practicable this year to intro-

duce a measure for the further equalisation of London rates, you may rest assured that the matter will continue to receive their active attention. The injustice of the present arrangement, in virtue of which the wealthier areas are enabled to escape a large portion of their obligations to the community of London as a whole must be manifest to us all."

THE North-Eastern Railway Company will shortly renew the large bridge carrying their passenger lines over the Tees near Thornaby. The bridge was built in 1841 and consists of cast-iron girders strengthened by wrought-iron tension straps, and carried by masonry piers resting upon piled foundations at about low-water level. Throughout the three river spans of 89 feet and the two shore spans of 31 feet the girders are continuous, being fastened together over the piers by bolts and straps. The flooring is entirely of timber, and there being four girders over each span, each of the two lines of way is independent of the other. The piers are being retained, the masonry and foundations being in good condition, but the upper courses are to be replaced by new bedstones and cornices. The new bridge, designed by Mr. W. J. Cudworth, of York, will be of the three-girder type.

A LOCAL GOVERNMENT inquiry was opened in June and adjourned until this month respecting the proposed re-arrangement and reconstruction of the London area known as the Italian colony. The housing of the working classes committee of the Holborn Borough Council report that with regard to the underground rooms, although all the other owners represented at the inquiry agreed to discontinue the use of the basements for living purposes, the Chandos Land and Building Society (the owners of the largest portion of the colony), "are making every effort to obtain consent for their continued use." The committee therefore recommend that, at the adjourned inquiry, the town clerk be instructed "to press for an undertaking for the discontinuance of the use of the whole of the underground rooms in the area for living purposes."

A REMARKABLE compensation case came before Judge Bryn Roberts at Mountain Ash County Court on the 1st inst. E. J. Lawrence, a haulier working at Penrhiwceiber, in July 1905 met with an accident while at work, and was

paid compensation almost the whole of the time from that date until March last, when he committed suicide by cutting his throat. Three medical men called for the applicant attributed the act to his loss of reason, owing to the pain and depression caused by the shock following the accident. No evidence was called for the respondents, but counsel argued on their behalf that it had not been proved that the man's suicide was the result of the accident. His Honour, however, held that he was bound by the medical evidence, which was all on one side. If it had not been for that, he said, he would hold that the suicide could not be traced to the accident. Judgment was given for the applicant, but stay of execution was granted pending an appeal.

THE rebuilding of the hydropathic establishment at Peebles, which was destroyed by fire in July last year, is being rapidly pushed forward. The new structure is being erected from designs by Mr. J. Miller, A.R.S.A., Glasgow. The grand corridor, which is 210 feet in length, will form, with the conservatory, a promenade of over 300 feet. The new dining-room will accommodate 300 people at separate tables. The roof of the dining-room being flat, a roof garden has been provided. The drawing-room, writing-room and grand lounge windows open upon verandahs, so that visitors may dine "al fresco." The new recreation-room will have accommodation for 400 people. All the floors and partitions will be fireproofed, and the buildings will be lighted by electricity. The baths will again be one of the distinctive equipments of the establishment. The cost of rebuilding and furnishing and equipping is estimated at about 100,000/. It is expected that the building will be open by Easter 1907.

THE Rugby Urban District Council some years ago acquired, for between 2,000/. and 3,000/., land in the middle of a rapidly-developing estate, for the purpose of public baths, but subsequently they decided that the site was not suitable. A proposal that the land should be sold was defeated. Ultimately it was agreed to retain it as an open space, provided adjoining owners would contribute, and they raised 600/. The Local Government Board sanctioned the spending of 214/. on the fencing and laying-out of the land. At the last meeting the Council decided to return the 600/. and not commit themselves to the retention of the land as an open space for ever. The clerk advised that the

Council had already committed themselves to the retention of the land by the covenants they had entered into, and the chairman said the only effect of the vote that night was that the 600*l.* would be returned and the land would be retained. Ultimately it was decided to take the opinion of counsel as to the exact legal position.

THE Edinburgh Dean of Guild Court have granted a warrant to the Royal Victoria Hospital Trustees for an administrative block at Craighleith. The additions are to consist of an administrative block and two pavilions containing twelve beds in each. The principal feature is the patients' dining hall—60 feet 6 inches by 23 feet. Immediately in connection with the hall are the kitchen offices and service-room between. There are also lady superintendent's business-room, dispensary and board-room. Accommodation is provided in an attic for servants. The two pavilions are exact copies of the pavilions which were erected some years ago, these having been found thoroughly adapted for the purposes for which they were designed. They are built of brick and harled, and are thoroughly comfortable and suitable in every respect. The architects are Messrs. Sidney Mitchell & Wilson.

THE Labour Department of the Board of Trade have issued a report on the changes in the rates of wages and hours of labour in the United Kingdom in 1905. The decline which characterised the movement of wages in 1901, 1902, 1903 and 1904 continued in 1905. In the latter year, however, the falling off was much less marked than in the four preceding years, and during the second half of the year an upward tendency was shown. This upward tendency has continued for the first six months of 1906, during which advances have taken place in all the more important groups of trades with the exception of the building trades. So far as could be ascertained by the Department, nearly 689,000 workpeople had their rates of wages changed during the year. Of these, about 319,000 received advances, amounting to 16,300*l.* per week, and nearly 250,000 sustained decreases amounting to about 18,500*l.* per week. Of the latter class 11,000 belonged to the building trades and 7,000 in the quarrying industry. The changes in hours of labour reported affected 95,985 workpeople, of whom 90,179 had their hours of labour reduced. The net effect of all the changes was a reduction of 65,265

hours in the weekly working time of the workpeople affected. Of the workpeople whose hours were changed over 92,000 (or 96 per cent.) were in the building trades. Of that number 70,000 were workpeople in the various branches of the building trades in London who had a rearrangement of their winter working hours.

THE new suspension bridge which has been erected over the Trent with the dual purpose of carrying the water mains necessary to serve the reservoir that is being constructed on Wilford Hill, and giving additional foot facilities across the river, has been formally opened. The bridge has a span of 225 feet between the centres of the abutments, and is 12 feet wide. Below the footway are two steel water mains, each 14 inches diameter. The pressure of water in these mains is about 90 lbs. to the square inch. The four cables, each constructed of 259 wires, are manufactured of the best plough steel. The ends of the cables on either side of the river are anchored to steel girders with adjustment arrangements, the girders being weighted by immense blocks of concrete. The cables pass over massive steel rockers on the tops of the abutments, and these rockers are firmly attached to steel girder frames built in the stone abutments. The ultimate strength of each cable is about 280 tons. The cables support, by means of fifty-eight suspension rods, the whole of the weight of the cross girders, pipes, footway, &c. Two lines of 12-inch diameter gas pipes have also been laid across the bridge for use at any future time, and there is also provision for electric cables. The bridge was designed by Mr. W. B. Bryan, the consulting water engineer, assisted by Mr. J. B. Lewes, the city architect.

THE new sewage works for Stratford-on-Avon were opened on the 27th ult. The outfall works, comprising 17 acre, adjoin the south-east side of the Great Western Railway about midway between Stratford and Milcote stations. A loan of 23,500*l.* was sanctioned by the Local Government Board for the purpose of the scheme which was commenced in September 1904. The pumping machinery consists of three gas-engines, each 30 b.h.p., together with three sets of double-acting piston-pumps 13 inches diameter and 16 inches stroke. Each set of engines and pumps is capable of raising a volume of sewage equal to twice the dry weather flow through about

2,200 yards of 15-inch rising main, the total lift being 100 feet. On leaving the station the sewage is conveyed for a distance of about one mile through a 15-inch cast-iron rising main laid across the racecourse and under the river Avon by an inverted syphon, thence under the Great Western Railway to the highest point of the site of the outfall works. On reaching the outfall works the sewage is first of all treated in liquefying tanks, and afterwards on bacteria beds worked on the continuous flow or percolating system, provision being made for the treatment of filtered effluent on specially prepared land filters, while some 10 acres of land is also laid out to receive the filtered effluent, the storm sewage being dealt with by means of contact beds. The contractors were Messrs. T. Vale & Sons, Ltd., Stourport, and the consulting engineers Messrs. Willcox & Raikes.

THE Stockport Town Council held a private meeting to consider the recommendations of the waterworks committee with respect to the execution of the first instalment of the Kinder waterworks. The town clerk had accepted service, on behalf of the Corporation, of a writ at the suit of Mr. Abram Kellett, the late contractor for the works, whose contract was terminated by the Corporation. Mr. Kellett claims damages for breaches of contract occasioned by the stoppage and abandonment of the works. He also claims the price of the work done since February 13, 1905, and 7,572*l.* held by the Corporation in trust, and a declaration that, being in possession of the land at Kinder comprising the site of the works, he is entitled to retain possession until his claims are discharged and he has removed his machinery and plant. He also asks for an injunction to restrain the Corporation from interfering with his possession of the land. A letter was read from the contractor for the laying of the pipe line from the Kinder to the Lyme reservoir stating that Mr. Kellett had given him notice that he should not permit the Corporation or their agents to interfere with any of his plans or the land comprised in his contract until they had satisfied his claim now before them. The committee resolved that in the event of Mr. Kellett persisting in his interference with the execution of the intake works and completion of the Kinder pipe line the town clerk be instructed to take immediate proceedings against him for an injunction.

### BELGIAN WORKMEN.

IN his report on the trade of Belgium, the British Consul-General refers to the prosperity of the industries of Belgium and the advantages to Belgian contractors in carrying out works of construction owing to the low rates of wages prevailing in that country for all classes of labour. In certain of the towns of Belgium a fixed minimum rate of wages is established by the municipality, which all tenderers for the contracts have to take into consideration before sending in their estimates. In Belgium the hours of labour are considerably longer than in the United Kingdom, and it is no uncommon thing for a labourer to commence work at 6 A.M. and terminate his work at 7 P.M., with the customary breaks for meals. For this he is probably paid an average wage of 3½*d.* to 4½*d.* per hour for each hour's work up to ten hours, and an increase of 25 per cent. for each of two additional hours, bringing up his daily earnings to from 3*s.* 6*d.* to 4*s.* 6*d.* for twelve hours' work. Many of the labourers in the towns are domiciled in the surrounding country, and have to rise at an early hour in order to be at work by 6 A.M. in summer and 7 A.M. in winter. A law regulating the employment of persons on Sundays came into force on July 27. It prohibits the employment of labourers and clerks and all other paid workers for more than six days in each week in any commercial or industrial occupation, with the exception of (1) transport by water, (2) fishing enterprises, and (3) itinerant vending. The exceptions permitted by the law in regard to the difficult categories of trade are so numerous and varied that the ultimate result will doubtless be in most respects similar to the conditions prevailing previous to its enactment, by which the majority of the employés were allowed respite from their labours on Sunday. The object of the law appears to be to prevent the compulsory attendance of workmen on Sunday in opposition to their own wishes. In certain industries requiring the presence of workmen on Sunday permission is given by the law to employ men in gangs working thirteen days in every fortnight, and again it is allowable to employ workmen twelve times a year on seven days in the week in the industries in which wind or water is the sole or principal motive-power.

**ARCHITECTS AND HEATING.**

FOLLOWING on the report made at the last annual general meeting of the National Association of Master Heating and Domestic Engineers, the following circular letter was issued to architects and others interested throughout the country :—

June 6, 1906.

**HOT-WATER AND HEATING SERVICES.**

I am instructed by my Council to communicate with you and respectfully draw your attention to the action of the plumbing trade (both masters and operatives) in interfering with the execution of contracts placed in the hands of heating and domestic engineers by architects and other clients, and to the attempts of the plumbers to secure a monopoly of the work of domestic hot-water supply.

The plumbers' claims, which have been made in various places throughout the country, are that all such work in any metal is plumbers' work only, and that it must not be undertaken by heating and domestic engineers. These claims have been successfully resisted, although in some cases the plumbers struck work and caused serious loss and annoyance to all concerned.

This class of work has always been largely carried out by heating and domestic engineers, and the experience of some firms (members of this Association) covers a period of over eighty years. The claims of the plumbers are of quite recent date, and cannot be admitted, as, if acceded to, the monopoly created would be a hardship and injustice not only to the master engineers, but also to the workmen engaged in this special branch of engineering, who by training and experience are thoroughly qualified to do the work in the most efficient and satisfactory manner.

The annexed resolution (Appendix No. 1), which was adopted at a joint conference between representatives of both master engineers and master plumbers, expresses the general position taken up and maintained by the members of this Association.

I am further to advise that, with the object of preventing trouble and giving correct information as to facts, my Council submitted representations to the Royal Institute of British Architects, and an extract from a letter conveying the decision of this body is also annexed (Appendix No. 2).

This, you will observe, is strictly neutral and impartial, and gives no support to the plumbers' claims for a monopoly.

As repeated assertions have been made by the plumbers that the Manchester Society of Architects agree that the work in question is plumbers' work only, I further annex (Appendix No. 3) copy of a letter received from this Society which makes it clear that their position is the same as that of the R.I.B.A.

My Council desire me to ask your kind and careful consideration of this matter and the favour of your co-operation, and I am to say that any communication from you will receive the best attention, and further information can be supplied if required.

H. B. WATT, Secretary,  
National Association of Master Heating and Domestic Engineers.

**APPENDIX NO. 1.****Joint Resolution of Master Engineers and Master Plumbers.**

"At a meeting held May 22, 1902, it was mutually resolved by the representatives of the National Association of Master Plumbers of Great Britain and Ireland and the Institution of Heating and Ventilating Engineers that in future it be observed that all leadwork be considered plumbers' work, but that a neutral line be taken as regards all iron, brass, copper or other metalwork, which may be executed by engineers or plumbers."

Proposed by Mr. D. M. Nesbit, London, on behalf of the Institution of Heating and Ventilating Engineers; seconded by Mr. J. H. Taylor, Huddersfield, on behalf of the National Association of Master Plumbers, and unanimously agreed to.

**APPENDIX NO. 2.****Extract from Letter from the Royal Institute of British Architects.**

"February 27, 1906.

"March 16, 1906.

"With reference to the circular issued by the Master and Operative Plumbers' Associations, dated March 25, 1903, which emanated from this Society, my Council regrets to hear that it has not been construed in the spirit it intended.

"I am instructed by my Council to inform you that it is in complete accord with the letter, copy of which I enclose, issued from the Royal Institute of British Architects, dated February 27, 1906 [see above], and to inform you that it desires the same to be accepted as its view of the matter.

"(Signed) PAUL OGDEN,  
"Honorary Secretary."

### NEW BUILDING STONES.

THE trade has been by repetition so accustomed to various artificial substitutes for natural stone that it views with a dubious eye anything announced as a novelty in this direction. We have just seen, however, a process which appears to be most successful. It is claimed that the processes of nature are in some degree imitated, and many years have elapsed since the process now perfected has been brought to its present state. It is certainly most wonderful to see slag, of which some 8,000 tons are taken out to sea and dumped in the broad ocean every week, utilised into handsome and useful adjuncts of building. Not only slag, but every waste of stone is used, and there

seems no limit to the modification which produces rare and costly marbles or a close-grained easily-worked building stone. Set out briefly, the process follows as nearly as possible the geological action of the forces of nature in making marble. The artificial method may be summarised as follows:—A pure carbonate of lime is composed of 56 parts of lime and 44 parts of carbonic acid gas. The necessary amount of stone is calcined in closed retorts for the purpose of liberating the gas and obtaining lime. The gas thus obtained is liquefied and stored in bottles for future use. The oxide is then withdrawn and mixed in a revolving drum, with a certain proportion of the ground carbonate. When the lime and fine powder are thoroughly mixed the whole is slaked. The hydrate of lime thus obtained is now in a fit state for pressing into slabs or other forms desired. Should, however, a coloured marble be desired, the colour, which is principally due to iron in its various combinations, is thoroughly mixed with the proportionate parts of the limestone and lime. The whole is then slaked. This method insures absolute evenness of colour throughout the mass, whether it be red, sienna, green, black or other colour. The plastic material is now taken to a hydraulic press capable of exerting a pressure which will give a cubic measurement to the block equal to the best and closest grained stone to be found in nature. After the slabs are removed from the press they are taken to a drying-room to expel the remaining moisture. The desiccated blocks are then placed in a cylinder, a vacuum is created and the carbonic acid gas originally extracted from the limestone and stored is now brought into action. The gas is first fed into the tank at practically no pressure, but the assimilation of the gas by the lime is so rapid that heat is speedily generated. So long as heat is maintained the tank requires feeding regularly only, but if signs of decrease are shown then pressure must be gradually applied until such time as the gauge remains stationary. When this occurs, the lime previously disseminated throughout the mass has become carbonate again, and the blocks are hardly to be distinguished from the natural stone. For marbles, lithographic stones, and Portland, Caen and other building stones the process seems most effective in its achievements. The Lithographic Stone and Marble Company, Ltd., of Ponder's End, and of 11 and 12 Finsbury Square, E.C., who

where the "Drawwell" can be seen in action.

are developing the patents, have every prospect of business, and the samples shown by them are particularly good specimens of artificial marbles and stones of all kinds.

### METROPOLITAN IMPROVEMENTS.

THE improvements committee of the London County Council have prepared a list of the improvements in respect of which they recommend that Parliamentary powers should be sought in the session of 1907.

Most of the schemes which have engaged attention are those prepared by the highways committee for the construction of tramways, involving the acquisition of property and the widening of portions of the thoroughfares along which the tramways will pass. If the tramway schemes be sanctioned by the Council it will be necessary for application to be made to Parliament by means of the Improvements Bill in the session of 1907 for powers for the compulsory acquisition of the property, with a view to the necessary widening of the thoroughfares.

The highways committee have urged the committee to advise the Council to arrange at once for the widening of the thoroughfares and to submit the necessary recommendations to the Council, so that the particular street improvements may be undertaken without delay. Having regard to the urgent representations of the highways committee, and with every desire to assist the general traffic in London, they have decided at once to recommend the Council to apply to Parliament for powers to execute the improvements, subject to the local authorities agreeing in due course to consent to the tramways and to make the suggested contributions towards the cost.

The committee have also considered the question of the street widenings which might be necessary or desirable in connection with the proposals for the construction of tramways from Forest Hill to the Crystal Palace, from the Marble Arch to Cricklewood, and from Streatham High Road to the county boundary.

Much of the property to be acquired consists of portions of gardens and forecourts, and it will therefore be necessary

to ask Parliament, as has been done with success in several past years, to grant the Council exemption from the operation of the 92nd section of the Lands Clauses Consolidation Act, 1845, which provides that where the promoters of a public undertaking, acting under statute, require to take a part of a house, building or manufactory, the owner shall have the right of calling upon them to take the whole. The cost of acquiring the whole instead of merely a portion of the property would in certain cases be prohibitive.

The manner in which the cost of street improvements in connection with tramways is apportioned as between the improvement account and the tramways account is under consideration. It should be mentioned that in each case of an improvement along the route of an existing or a proposed tramway the whole cost of laying down and paving the tramway track will be charged, in accordance with the usual practice, to the tramways account.

Not any of the schemes will involve the displacement of a large number of persons of the labouring class, but where any displacements whatever are contemplated provision for rehousing has been made in the estimates of the cost of acquiring the necessary property.

Having regard to the nature and small extent of the improvements in question it is not desirable in this instance to apply to Parliament for powers to levy an improvement charge upon owners of property benefited; nor do the committee consider that the improvements are of such a character as to justify the Council in incurring the very great expense of constructing subways for pipes and wires along the particular thoroughfares, though they propose to adopt the precaution of inserting in the Bill the usual clause to empower the Council to require the companies to move their gas, water and other pipes affected by the improvement in question. This will enable the Council, if it so desires, to determine hereafter to construct certain subways in particular places.

The total net cost to the Council of the suggested improvements included in the list is estimated at 140,760*l.*, after deducting the contributions from the local authorities. If there be added to this an amount in respect of contribu-

tions towards the cost of local improvements, say 100,000*l.*, the amount recommended for the year 1906-7 becomes 240,760*l.* This is less than the annual amount recommended in some of the previous years. If the Council adopt the report the net amount voted for street improvements during the eighteen years commencing March 1889, and ending in March 1907, will be about 7,968,456*l.*, which represents an average annual expenditure of about 442,692*l.* The Metropolitan Board, during the thirty-three years of its existence, spent upon street improvements, including the embankment of the Thames, 11,516,974*l.*, an average annual expenditure of about 349,000*l.* Since the Board was superseded by the Council the traffic in London has considerably increased, and the need for new and widened thoroughfares has become more and more pronounced. Having regard to this great public need it became exceedingly difficult to refrain from submitting to the Council several important and necessary schemes, but, in view of the large amount to which the Council is already committed in respect of street improvements, and having regard to the opinions recently expressed in the Council against further extensive liability being incurred, we have decided to submit this year only a few of the most urgent schemes, all of which, with one exception—namely, the reconstruction of Neckar Bridge, Trundley's Road, Deptford—are connected with tramway proposals, special circumstances making it desirable for them to be undertaken without delay.

### BUILDING IN GLASGOW.

An address was delivered by Colonel Robert King as Dean of Guild of Glasgow. He said:—As this is the last occasion on which I shall have the honour of presiding over this Court as Dean of Guild, I have to ask your indulgence while for a few minutes I refer to the work brought before the Court during the past year. In addressing you last year I referred to the falling-off in the work brought before us during the year—a falling-off for which we were all prepared, and you will not be surprised to be told that the improvement which has taken place has been comparatively small, but you will rather be surprised to hear that there has been any betterment at all. The total valuation of the

work passed by the Court during the year to August 31, 1906, was 1,440,387*l.*, against 1,303,502*l.* for the previous year, or an increase of 136,885*l.*, the average for the last fifteen years, from 1891-2 till 1905-6, being 1,693,634*l.* so that last year's work is less than the average of the fifteen years by 253,247*l.* I hope, however, that as an improvement has set in it will go on increasingly, and that the reign of my successor in office will be marked by a steady and important advance in the work brought before the Court, and that that advance will be indicative of a general improvement in the prosperity of our city. When we come to look more particularly into the statistics of the work we find that last year there were 2,863 houses sanctioned as against 2,078 the previous year.

Of one-roomed houses there were 505, as against 260 the previous year. Much has been said against one-room houses, and it is to be regretted that the necessity for them exists; but, on the other hand, it is a cause for satisfaction that the miserable hovels in the congested parts of our city are being replaced by new and better ventilated and more sanitary houses. In a city like Glasgow there must always be a large number of unskilled and, consequently, lower paid workers who, in beginning housekeeping at least, cannot afford to pay high rents for their houses. The increase during the year of 548 in the number of houses of two apartments is satisfactory. In regard to public buildings there were only six linings granted, against twenty-one last year, but they were more important, as the valuation was 56,450*l.* as against 73,180*l.* In churches, halls and schools there were twenty linings, valued at 133,535*l.*, against fourteen, valued at 130,480*l.*, showing that the spiritual, moral and intellectual interests of the city are still being attended to. In warehouses, stores and workshops there were ninety-nine linings, with a valuation of 393,983*l.*, against 124 linings and a valuation of 280,168*l.*; and for alterations there were 213 linings, with a valuation of 241,067*l.*, against 248, with a valuation of 253,433*l.* There were 7,345 lineal yards of new streets passed, against 3,018 last year, so that I leave plenty of new ground for my successor to build up. In addition to the granting of new linings for these houses, shops, churches, halls, &c., the value of work carried out under authority of the Dean of Guild Court in connection

CONTRACTORS TO THE LONDON COUNTY COUNCIL

with notices issued by the master of works to proprietors in terms of the Glasgow Police Acts, 1866 and 1900, and payable by these proprietors, was 7,906*l*. When we consider the number of houses built in each of the eight districts into which the city is divided, we note that in the central there were only fifteen houses sanctioned, showing how entirely this district is being devoted to business purposes. The eastern, with 1,005, has the largest number of houses; St. Rollox is next with 621; Maryhill is third with 467; Queen's Park is fourth with 359; the Western fifth with 242; the Southern sixth with 163; the Northern seventh with 37; and the Central last with only 15. I have to apologise for troubling you with so many figures, which are always wearisome, and which it is impossible to remember, but they are, I think, interesting in showing to some extent the amount of work which passes this Court, and as indicating the prosperity of the city. I have said that this is the last occasion on which I shall preside over this Court as Dean of Guild, and I give up the work with much regret. I have received so much kindness and consideration from everyone connected with the Court that my work has been rendered not only pleasant but easy, although I have been conscious of my shortcomings. To those gentlemen who have been associated with me in the work I desire to return my sincere thanks.

### MAINTENANCE OF ROADS.

A SPECIAL report upon improved methods of road construction was presented by the surveyor (Mr. J. S. Crawshaw) at the last meeting of the Weybridge Urban Council. Mr. Crawshaw stated that he had made careful inspection of many of the most recent methods of road construction, as devised for the purpose of resisting the wear caused by the great change in the vehicular traffic of the country, and with a view to obviate the nuisance arising from the road dust, which was occasioning great inconvenience to the residents and considerable loss to tradespeople. Amongst the places he visited were Madeira Road, Brighton; main road, Malling to Maidstone; main streets, Louth; the London Embankment; main street, Skegness; Victoria Terrace, Norton Road, and Sackville Road, Hove; main road, Worthing.

He had also examined the Surrey main roads near Guildford and Cobham, which had been tar-coated. In his opinion the method in use at Hove was far more serviceable, and not so likely to be disturbed under bad weather conditions. This method was to coat the road with tar by a special patented process called the Laissailly method. The tar was boiled and applied to the clean road surface at a very high temperature. The result was that the tar, being in such a liquid form, penetrated to a depth of from 1 to 2 inches, and, after exposure, a coat of chippings was spread over the surface, which absorbed the surplus tar and increased the thickness of the impervious material. This, after considerable traffic or rolling, presented a good surface, and was no doubt the best tarring process in use. It was, however, unfortunate that the road surface remained black, which did not improve the clean appearance of the district. The surveyor also submitted the results of tests of various materials used in road-making. He was strongly of opinion that all bad material, coated with tar or not, would prejudice the life of a road.

It was found from these tests that the materials which the Weybridge Council had been using were the best of their respective kinds, proving that the short lengths of road which were in such bad condition were subject to exceptionally heavy and damaging traffic. He found that the cost of granite used for the repairs of Church Street during the past four years amounted to 1*s.* 8.3*d.* per square yard, or 5.06*d.* per annum. The cost for Queen's Road amounted to 1*s.* 2.2*d.* per square yard, or 3.55*d.* per annum. These were very small amounts and were likely to be considerably increased in the future, even if the same kind of material were used, as he found that it was four years since Queen's Road was recoated, and Church Street was recoated in January 1905. He, therefore, recommended that a length of road should be coated with tar slag macadam of a thickness of 4½ inches, at a cost of 4*s.* 3*d.* per square yard; that a further length should be laid of granite in combination with the matrix which he had described, at a cost of 1*s.* 4*d.* per square yard; and if sufficient work could be undertaken, that a short length of tarred Kent rag be laid down at a cost of 3*s.* 9*d.* per square yard.

The surveyor's recommendation to lay down tar slag in Church Street was approved.

## CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

## IMPORTANT TESTS OF OPEN DOMESTIC GRATES,

Carried out Officially by the  
Coal Smoke Abatement Society  
In Conjunction with  
H.M. OFFICE OF WORKS,  
At the New Government Buildings in Parliament St., London.

### REPORT

(See page 25 of Supplement in issue of June 8).

As a final result of the whole of the tests the Examiners find that of the  
grates submitted those of

### Messrs. CANDY & CO.

and of two other makers are the best, showing practically equal results.  
The amount of coal consumed by these grates was found to be moderate in com-  
parative proportion with temperature obtained; the fires were bright and clear.  
N.B.—Thirty-seven grates were tested, including nearly all the best known  
modern types.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\* \* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GAYWOOD.—Oct. 22.—The Norfolk education committee invite plans, specifications, elevations and estimates for a new school. The plan (if any) selected will be accepted subject to the approval of the Board of Education. Particulars can be obtained on application to the Secretary, at the County Education Office, 57 London Street, Norwich.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212/ each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

**WOOLWICH.**—Oct. 31.—For women's dining hall at the union house, High Street, Plumstead. Deposit 1/ 1s. Mr. J. O. Cook, architect, 1A Eleanor Road, Woolwich.

Mr. CONSUL TEICHMANN, of Eibenstock, reporting to the Washington Bureau of Manufactures concerning the world's supply of wood, says that the demand has gone on increasing until the question of a continued supply to meet the present rapidly-increasing rate of consumption is a very serious problem. The United States has not enough to supply its own demand, and is dependent upon Canada, which, with its 798,133,000 acres of forests, represents probably the largest single area of any country in the world. Although large territories of forests, especially in China, Korea, India and South America remain to be utilised, it is certain that the question of the future wood supply of the world, now attracting the attention of the economists, will continue to excite great interest.

ACCORDING to an official return, in forty-five cases the County Councils have received no applications from Rural District Councils to put in force Part 3 of the Housing of the Working Classes Act, and no resolutions by Parish Councils under section 6 had been reported to them. Sixty-one County Councils were communicated with by the Local Government Board. In two of the remaining sixteen cases a resolution by a parish council under section 6 was reported. In the case of the Durham County Council a local inquiry was held, but no decision had been arrived at up to the date when the information was forwarded to the central authority. In the second instance, the Hertfordshire County Council satisfied themselves that the existing cottage accommodation in the area concerned was adequate for the needs of the place, and the County Council took no further action in the matter.

## MARPEDO WHITE JAPAN

## SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &amp;c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

**TRADE NOTES.**

THE Servite schools, Chelsea, are being warmed and ventilated by means of Shorland's patent Manchester grates, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

MESSRS. FREEMAN & FREEMAN, brick and tile manufacturers and merchants, of 200 and 202 Phoenix Street, St. Pancras, N.W., have removed their offices to a more central and convenient position at 52 Bedford Row, W.C., at the rear of First Avenue Hotel, High Holborn, W.C.

MESSRS. PATMAN & FOTHERINGHAM, Theobald's Road, W.C., are carrying out extensive alterations to the Savoy Theatre under Mr. Blomfield Jackson, the architect. The theatre was erected by them. The same firm were the contractors for the recently-opened North Library of the Islington Borough Council at Manor Gardens, Holloway Road, N., which is according to the designs of Mr. H. T. Hare.

MR. MAURICE GRAHAM, having recovered from a serious illness, will again attend to the management of the business which has been purchased from the liquidators of Graham, Morton, Ltd., including the whole of the drawings, designs, copyrights, wood patterns, patent rights and models, and a large quantity of tools and machinery. The manufacture of specialties of elevating and conveying machinery will be carried on as before at the new works in Leeds.

A LARGE number of the glasshouses at Welbeck Abbey are being removed and modernised. The new work includes:—Span corridor, 280 feet by 16 feet; three span plant-houses, each 43 feet by 20 feet; six span houses, each 37 feet by 12 feet; span propagating-house, 60 feet by 12 feet; also a lean-to range comprising three fig-houses and two vineries, 300 feet by 15 feet. The work of erecting the houses has been entrusted by the Duke of Portland to Messrs. Messenger & Co., Ltd., horticultural builders, of Loughborough and London.

AN Institute and Reading-room given to the town of Llangefni, Anglesey, by Mrs. Bramston Smith, of Pencraig, and Captain Lawrence Williams, of Parciau, Llanelugrad, was opened on Friday last by Mrs. Bramston Smith. The Institute contains reading-room, games-room, billiard-room, bath-room, lavatories, &c., and accommodation for resident caretaker. The contractors have been Mr. T. P. Thomas, of Llanfair, for the general work, and Mr. Philip E. Jones, of Bangor, for the whole of the sanitary and plumbers' work. The Institute has been designed by and erected under the superintendence of Mr. Richard Hall, architect, Bangor, North Wales.

THE foundation-stones of the new Baptist church at Market Harborough were laid on the 18th inst. The building is designed in Late Gothic, freely treated, the facings being red bricks and dressings of stone. The contract amount for the church, &c., including alterations and additions to the existing school, is 1,982*l.*, and is let to Messrs. H. Herbert & Sons, 33 Millstone Lane, Leicester. The accommodation in church is 543 persons. The architects are Messrs. George Baines & Sons, 5 Clement's Inn, Strand, London, W.C.

THE foundation-stones of the new United Methodist Free church at Banner Cross, Sheffield, were laid on the 9th inst. The contract for the present portion of the scheme, which is the future school premises, is let to Mr. Charles Ward, 80 Langdon Street, Sheffield, the amount being 2,243*l.* The buildings are faced in rock-faced stone in diminishing courses, with ashlar dressings. The architects are Messrs. George Baines & Sons, 5 Clement's Inn, Strand, London, W.C.

## ELECTRIC NOTES.

THE Stepney Borough Council have decided to dispense with the services of their consulting electrical engineer, who has received a salary of 800*l.* per annum.

THE Sunderland electricity committee on Tuesday appointed Mr. Blackman, of Bradford, electrical engineer for the borough, at a salary of 1,000*l.* per year, in place of Mr. Day, of Bolton.

AT Dewsbury a collier sued the Yorkshire Woollen District Electric Tramway Company for 500*l.* for injuries caused to his four-year-old child by one of defendant's cars, which ran over the child and cut off one of its feet in Huddersfield Road, Dewsbury. The jury awarded 350*l.* damages and costs, the judge ordering that provision should be made for the child's future.

THE Felten and Guillaume-Lahmeyer Works of Germany have concluded a contract with the Societa Industriale Italiana, of Rome, for the construction of a hydraulic-power plant of no less than 18,000 h.p. on the Tronto river. The plant will be used for electro-technical purposes, and will transmit current at a voltage of from 40,000 to 50,000 volts—the highest yet employed in any works in Europe.

Owing to the extensive use now made of electricity for all purposes on board warships the Admiralty are finding out that there is a shortage of these mechanics in the Service. A large entry of electricians is therefore to take place during the next few months. All those desirous of joining should be good fitters. The necessary training in electrical work will be imparted on the torpedo schools at Portsmouth and Devonport after entry.

THE Menai District Council have interviewed a representative of the Mona Electric Lighting Company, who sought the support of the Council to a scheme for supplying the town with electricity. It is proposed to have the generating station at Pwllfanog, and the current would be conveyed along the streets by means of wires placed underground. The meeting decided to approve of the principle of the scheme.

AMONG the improvements being carried out by the Leith Dock Commission is the introduction of electric power in the working of the ponderous gates at the Victoria Dock. An electric motor is being placed on each side of the dock-head, and a connection has been made with the electric-lighting station at the Queen's Dock, from which the power will be obtained. Hitherto the gates have been worked by hand, as many as eight men being required to open and close them.

AT St. Mary's Hall, Coventry, Mr. H. R. Hooper held an inquiry on behalf of the Local Government Board into the application of the Coventry City Council to borrow 37,432*l.* for the purposes of the electric-light department. The amount applied for included 2,000*l.* for laying spare pipes for cables to obviate the necessity of taking up streets, 432*l.* for seventeen new arc lamps and posts, and 35,000*l.* for new generating plant, mains, machinery and minor items. The revenue of the undertaking has increased from the sum of 5,397*l.* in 1901 to that of 19,493*l.* in 1906.

THE Secretary for Scotland has definitely refused the application of the Bo'ness Town Council for authority to borrow, under their provisional order, an additional 4,000*l.* to carry out further capital work in connection with their electric-lighting scheme, originally estimated to cost 25,000*l.* The Scottish Secretary is understood to base his decision on the advice of the Board of Trade that the agreement *ab initio* is *ultra vires* for the parties to enter into. The deadlock is creating a great amount of local interest, which is intensified by the fact that the Council, relying on authority being granted, had paid up to the company the over-expenditure to the extent of about 2,000*l.* borrowed temporarily from the burgh sinking funds.

MR. A. A. DAY, of Bolton, whose appointment as electrical engineer at a salary of 800*l.* was cancelled on the

# THE LEEDS FIRECLAY COMPANY, LTD.

10th inst. by the Sunderland Corporation on the ground of a misstatement as to his age, says that on his application form he stated that he was over forty years of age, and he also made the same statement before the committee. Notwithstanding this, the committee recommended him for appointment, and this was confirmed by the Town Council. On his subsequently discovering that he had made a mistake and that he was older than he thought, he wrote to the Sunderland Corporation offering to withdraw his application, but this was not accepted. Mr. Day has not resigned the post of electrical engineer at Bolton.

At Stirling Town Council on the 15th inst. it was reported that a reply had been sent to the National Electric Construction Co., Ltd., stating the terms on which the Town Council were prepared to supply current to the company's cars to be as follows:—2d. per unit for the first 100,000 units per annum, 1½d. for the next 50,000 units, 1¼d. for the next 50,000 units, 1½d. for the next 50,000 units, 1¼d. for the next 50,000 units and 1d. for each additional unit. The Town Council also stated that they were prepared to undertake the maintenance of the track within the burgh on payment of 100l. per mile of single track by the company. It is also prescribed that cars shall only be run on Sunday if the ratepayers approve on a poll. In reply the company state that they cannot give the price proposed for current, and make an alternative offer; they cannot agree to the terms asked for maintenance of track; they will not proceed with the scheme without Sunday running; they cannot continue the present payment of 3½l. per annum, and they must have a forty-two years' concession.

#### BUILDING AND BUILDERS.

An effort is to be made among employers of labour to induce them to patronise the militia battalions raised in their respective counties, and inducements, it is stated, will be held out to them to accept commissions in the force.

Building operations in Portsmouth are expected to be quite brisk in the future, judging from the exceptionally large number of plans submitted for the approval of the roads and works committee on Monday. No fewer than seventy-five houses figured on the list.

Two or three large building estates are on the eve of development at Winchester. At a Local Government inquiry it was officially estimated that the population of Winchester has increased 2,000 since 1901.

Mr. E. A. SANDFORD FAWCETT, Local Government Board inspector, held an inquiry at New Tredegar into the application of the Bedwelty Urban District Council to borrow 35,000l. for sewerage and sewage disposal for the Bedwelty area.

The Sunderland Town Council have decided to have a scheme prepared for building a sea-wall and promenade at Roker. It is proposed to set the unemployed to do the work during the winter, and it is expected that a grant will be received from the fund at the disposal of Mr. John Burns. The cost is expected to be about 20,000l.

OFFICIAL information has been received at the Emigrants' Information Office to the effect that although a demand for labour in the building trade exists at San Francisco, the present condition of prices in that city makes labour in the United Kingdom better remunerated. Those intending to go out must be prepared for an expensive journey and most expensive living.

Mr. W. G. SUTHERLAND, secretary to the National Association of Master Painters, in the course of his report presented at the opening of the annual conference and exhibition, drew attention to the new Workmen's Compensation Bill, which, he said, was likely to press very heavily on the employers and to be provocative of a great deal of litigation. All this more and more pointed to the necessity of employers protecting themselves against legal costs and personal liability. The year had been singularly free from trade disputes, but it must not be supposed that this was a condition of affairs likely to last. The Trade Disputes Bill would let loose a considerable body of "differences" that might entirely change the situation, and that not for the better. Local associations would need to be on the alert for these troubles. The President's prizes to apprentice students for excellence in general work were awarded as follows:—Gold badge, R. J. Collins, Plymouth; silver badge, John Thomas Wilson, Halifax; bronze badge, Charles Wood, Hull.

## VARIETIES.

THE Sleaford Rural Council have adopted a scheme for a water supply to six parishes. The cost, as estimated by Mr. Marsden, the surveyor, is 10,750/.

THE rateable value of Birmingham in 1892 was officially put at 2,040,808/.. According to tables just issued it is now 2,891,047/., which is an increase of over 40 per cent. More than half of this is due to building operations.

THE Prince of Wales, who is the owner of the Duchy of Cornwall estate in Kennington, is taking advantage of the falling in of the leases to demolish a number of dilapidated dwellings and to erect in their place model houses.

THE York City Council have accepted the following resolution:—"That the town clerk be instructed to obtain information and report to the Council as to what other corporations are doing to promote the commercial development of the towns and the establishment of new industries."

THE Local Government Board have notified certain distress committees outside London that they are prepared to consider applications from them in respect of the 200,000/.. voted by Parliament for contributions in aid of expenses under the Unemployed Workmen Act.

At a public meeting in the Mansion House, London, it was decided to erect a building to serve as the headquarters of the Young Men's Christian Association, as a memorial to the late Sir George Williams, its founder. The minimum estimated expenditure on the building is 85,000/.

MR. R. G. E. WEMYSS, of Wemyss Castle, Fife, has acquired the British rights of the Mercedes Motor Company, and intends erecting works on a field near Denbeath, Methil. Work will probably be begun with the buildings early in the spring.

THE market hall committee of the Coventry Corporation recommend the City Council to purchase the old Coventry post office for the sum of 3,500/., and to provide for three shops on the ground floor and a corn market and assembly room on the first floor, at the estimated cost of 3,500/.

ACCORDING to returns made by the Kensington rate collectors there are 2,290 empty houses and flats in that borough, an increase of nearly 400 compared with the previous half-year, which is said to be attributable to the

noise and dust occasioned by motor 'bus and other heavy motor traffic.

NEGOTIATIONS have been proceeding between the water committees of Coventry and Birmingham with reference to an application by the former for a supply of water from Shustoke reservoir. At a joint meeting of the two committees on Monday provisional terms were agreed upon, subject to confirmation by the Councils of the two cities and ratification by Parliament.

A SYNDICATE is being formed to proceed with a scheme for a "tube" railway under the Ribble from Hesketh Bank on the Southport side to Whanton Bank on the Lytham side, with connections between Wigan, Southport, Liverpool and Blackpool. Mr. A. E. Haigh, resident engineer to the Baker Street and Waterloo Railway, London, has been making an inspection of the Ribble, and taken borings of the strata beneath the river.

THE Glasgow Corporation adopted on the 13th inst. the following motion:—"That, having regard to the numerous fatal and other accidents in public works in the city caused by the non-inspection for long periods of cranes and such like appliances, it be remitted to the Parliamentary Bills committee to obtain from the chief constable a return showing the number of such accidents during the past three years."

THE Grangemouth docks of the Caledonian Railway Company, which have been under construction since 1898, and have cost one and a half millions sterling, have been formally opened. To secure an entrance from the Forth, and do away with two miles of tortuous course up the river Carron, the company acquired 500 acres and constructed a direct channel. The entrance-lock is 525 feet long by 80 feet wide, with a depth of 32 feet at high water. The area of the docks is 116 acres. Immediately inside is a basin of ten acres.

THE Coventry City Council have adjourned for three months the consideration of the proposal that the Coventry Brewery premises in Leicester Row and Leicester Street be purchased for 8,000/.. for the purposes of a refuse destructor and general depot. The recommendation in favour of proceeding with the erection of municipal offices and shops in Earl Street and St. Mary Street at an estimated

cost—exclusive of site and furniture—not exceeding 30,000*l.* was adjourned till the next meeting.

THE Tyne Commission have made payment of a further sum of 5,000*l.* to Sir John Jackson, Ltd., on account of work executed up to September 30 in connection with the reconstruction of the North Pier, this bringing the amount sanctioned for payment up to date to 312,500*l.* The engineers reported that very good progress was being made with all sections of the work, more than three-quarters of the raised promenade having been completed.

A COMBINED effort is to be made by the principal high-way authorities in Worcestershire to press upon the County Council the justice of their claims for contributions from the county authority towards the expenses incurred in watering main roads. The County Council have hitherto declined to pay any part of the annual cost of street watering, contending that it does not form any part of "street maintenance."

THE Edmonton District Council have considered a resolution passed by the Ratepayers' Association and Municipal Alliance protesting against the Council adopting a scheme for workmen's dwellings, estimated to cost from 83,000*l.* to 100,000*l.*, when there are nearly 2,000 houses already empty in the parish. The Association will call the attention of the Local Government Board to the condition of the district. The scheme is to be limited to the erection of houses to let at 6*s.* 6*d.* a week.

THE Bradford City Council have adopted the water committee's minutes with reference to the report on afforestation of lands belonging to the water department, which contained a resolution stating that it was undesirable to appropriate any such lands for afforestation "in consequence of it being conclusively proved that there would be a financial loss." The water committee have been instructed to consider the best means of urging on the Government the desirability of a national afforestation scheme.

A LOCAL GOVERNMENT BOARD inquiry was held on the 16th inst. into an application by the Coventry Corporation for sanction to a loan of 4,100*l.* for the erection of eight cottages for labourers upon the farm (1,600*l.*), the provision of a Dutch barn and other buildings. The farm is the property of the Corporation, consists of 482 acres and was

acquired in 1897. Since that time two adjoining farms with acreages of 225 and 210 acres had been rented. It was found very difficult to rent cottages within a reasonable distance.

MR. F. H. TULLOCH, Local Government Board inspector, conducted an inquiry with regard to applications by the Birmingham City Council for sanction to borrow several sums of money, amounting to over 17,000*l.*, for various public improvements. The first application considered was for permission to borrow 12,992*l.* for purposes of street improvement in Alum Rock Road and Lower Loveday Street. Permission to raise 2,748*l.* was asked for the purchase of land in All Saints Ward for purposes of public walks and pleasure-grounds. The last item was for the erection of stables at a cost of 1,200*l.*

THE Middlesbrough Council have agreed (1) that a transporter bridge be erected over the river Tees, and that the Corporation land at each side of the river be utilised for the purpose. (2) That the town clerk be instructed to take all the necessary steps for the promotion of a Bill in Parliament for the purpose of obtaining the requisite powers therefor. (3) That the town clerk engage Parliamentary agents to act in conjunction with him. (4) That a meeting be held at an early date to consider the question of the appointment of an expert engineer.

THE Southend Town Council adopted on the 16th inst. a scheme of sewerage for the town to provide for a population of 100,000 at a cost of 95,000*l.*, including the provision of a covered tank at the eastern boundary of the borough, with a capacity of 1,200,000 gallons, and with an outfall sewer laid across the foreshore a distance of 3,000 yards. The Council deputed a committee to deal with the details. The scheme is the outcome of the adverse judgment in the recent action against the Corporation for the pollution of oysters on the foreshore, three miles west of the pier.

THE sea at Filey has worked the clay out under the foot of the apron in one part of the sea wall, and there is a fear of the damage extending. Mr. Mathews, the engineer to the Bridlington Corporation, in a report suggests that groynes should be run out for some 50 feet at intervals to break the force of the incoming waves. The committee suggest as an alternative that rough boulders and concrete

blocks sunk deep immediately at the foot of the apron would prove equally as effective, it being held that the placing of groynes—after the manner adopted at Bridlington—detracts from the free sweep of the sands.

DURING the month of July 554 buildings or tenements including alterations and additions, were approved by the Johannesburg Town Council, as compared with 857 in the same month of the previous year. The estimated cost of erecting the buildings approved last month is 107,340*l.*, and the number of persons for whom accommodation will be provided in these buildings is: white, 850, and coloured, 1,668—estimated on floor space and sleeping accommodation at 50 square feet for each white and 36 square feet for each coloured person.

THE Cardiff Corporation general purposes committee on the 13th inst. unanimously agreed to refuse to purchase Lord Bute's interest in the Cardiff Docks and Railway Company for the purpose of forming a harbour trust. In a letter Lord Bute's agent said his lordship was far from being anxious to dispose of his dock interest, and had great hesitation in deciding to give the Cardiff Corporation an opportunity of considering the desirability or otherwise of acquiring the properties. The committee did not think it advisable to incur such a heavy financial responsibility.

THE Mersey Docks and Harbour Board have considered a letter from the Liverpool Trade Council requesting that, in view of the large number of men at present out of employment, prompt steps should be taken to begin the extension works at the Brocklebank Dock. These works have already received the sanction of Parliament, and are estimated to cost about 250,000*l.* The Board expressed the utmost sympathy with the request, and hoped that circumstances may before long be so favourable that the work may be taken in hand.

THE Isle of Capri is providing facilities for visitors. Work on the funicular railway, which will connect the landing-place at the Grande Marina with the Piazza, has been in progress for the last six months and is advancing rapidly. A company has been formed in Milan, with a capital of 20,000*l.*, to construct the funicular railway, to light the towns of Capri and Anacapri with electricity, and to pump Serino water for drinking purposes direct from tank-

boats to a reservoir above the Villa Behring. The contractors are under contract to complete the railway by the spring of 1907, and an easy and inexpensive communication will thus be provided from the boat-landing to the town of Capri.

THE Ellesmere Town Council recently offered a premium of 20*l.* for the best scheme of dealing with the sewage disposal. There were nineteen competitors, viz.:—Messrs. Berrington, Son & Martin, Wolverhampton; Mr. F. W. S. Stanton, Bristol; Messrs. Spinks & Pilling, Leeds; Mr. H. S. Watson, London; Mr. H. J. Weaver, Gloucester; Mr. W. M. Beckett, Manchester; Messrs. Callum & Wood, Manchester; Mr. E. V. Edmunds, Llangollen; Mr. A. H. Mountain, Manchester; Mr. C. Matthews, Nantwich; Mr. C. A. Atkinson, Liverpool; Mr. E. Garside, Ashton-under-Lyme; Mr. C. J. Lomax, Westminster; Messrs. Elliott & Brown, Nottingham; Messrs. Beesley, Son & Nichols, Westminster; Messrs. Newton, Son & Bayley, Manchester; Mr. C. Nicholson Lailey, Westminster; "Rate" and "Economy." A report will be presented later.

THE Aberdeen Town Council on Monday again had under consideration the question of the Aberdeen water-supply. The Council at a previous meeting decided by a majority of one vote to take steps to obtain powers from Parliament to take a fresh supply of water from the river Avon. The water committee were instructed on Monday to consider anew the whole question of the water-supply and employ further expert advice, and to obtain from the burgh surveyor a report as to the construction of filter beds at Invercarnie, with the view of putting a stop without delay to the existing contamination. The construction of filter beds as suggested is estimated to cost about 80,000*l.* The necessary power for the construction of these filter beds was obtained by the Town Council some years ago.

A NEW system of drainage, which has cost about 50,000*l.*, for the lower part of the area covered by the Esher and Ditton Urban District Council, has been inaugurated. The total length of concrete sewer constructed in tunnel was about 11,419 feet; the sewer was constructed *in situ*, and of the dimensions of 3 feet 9 inches and 3 feet 6 inches, egg-shaped. The maximum depth of the sewer was 62 feet, and the minimum, by Thames Ditton post-office, 33 feet.

& Engineers,

The gradient was 1 in 1,000, and the discharging capacity per day of twenty-four hours, when running full, was equal to about  $9\frac{1}{2}$  million gallons. The gravitation scheme was prepared by Mr. A. J. Henderson, with Sir A. Binnie as consulting engineer. Messrs. Mowlem & Burt were the contractors.

THE Governors of the Glasgow and West of Scotland Technical College state in their annual report that a beginning had been made with the second section of the new buildings, which would form the centre block of the Andersonian wing, facing George Street. The foundation-work had been completed, and the main walls brought to ground level, but operations had been suspended for lack of funds. The Governors had determined that they would not place a load of debt upon the college, and they did not propose to enter into further contracts until additional subscriptions had been promised. The present position of the building and equipment fund is as follows:—Subscriptions, &c., 245,371*l.* 5*s.* 7*d.*; expenditure—site, 44,653*l.*; buildings, first section, 155,607*l.*; equipment, 22,272*l.*; foundations of second section, about 5,000*l.*; making a total of 227,532*l.*, leaving a balance available for second section of 17,839*l.* 5*s.* 7*d.* This balance included a grant of 10,000*l.* which the City Council had been good enough to promise from the Common Good, conditional upon a grant of at least an equal amount being received from the Education Department. The decision of the Education Department regarding the allocation of funds in their hands, out of which a grant to the building fund may be made, was not yet known, but it was believed that favourable consideration would be given to the application of the Governors. The buildings already erected, which are of the most substantial character and fireproof throughout, had cost not more than 7*½d.* per cubic foot.

#### ENGINEERING IN AMERICA.

THE number of engineers who are competent to carry out works of water-supply in America must be excessive to allow of the publication of the following advertisement:—Proposals will be received from engineers on October 9,

A.D. 1906, for making plans and specification of a reservoir for the improved water-supply of the city of Ada, Indian Territory, and for other improvements to the water system of said city. Each engineer will be required to submit complete plans and specifications for the work to be done, accompanied with their proposal to superintend the work, and their estimate in detail of the cost of the work; said estimate shall fully cover the cost of construction work and engineering services. Each engineer shall furnish evidence from some solvent surety company that in the event that contractors bidding on the work under his plans and specifications, shall result in no responsible bids for the construction of work at or below said estimated cost, that the bonding company will make bond for said engineer in the sum of not less than ten thousand (10,000) dols., guaranteeing the cost of said work shall not exceed the amount of said engineer's estimate. Engineers entering this competition shall so draw their plans and specifications that the city may purchase their material direct from the manufacturers, and that the contractor shall bid in the assembling and construction of those materials into the proposed work. Each competitive plans and specifications shall bear the approval of the Oklahoma Board of Fire Underwriters. The city will employ that engineer whose plans and specifications and proposal to do the work shall appear to be the most advantageous to the city of Ada, reserving the right to reject any and all proposals, it being distinctly understood that the city will not be indebted to any competing engineer except one who may be employed to superintend the work."

#### COST OF CONCRETE CONSTRUCTION.

CONCRETE construction in buildings in New York has been threatened with a serious handicap by an agreement recently made between the master masons and the bricklayers' union, under which all the work of placing concrete is to be done by bricklayers. One of the great merits of concrete-work about buildings has been that it was done by unskilled labour. The moulds had to be prepared and set by skilled men, but the concretework itself could be done by the most ignorant class of labourers, provided they worked under

Queen Anne's Chambers, Westminster, LONDON.

good supervision. Under the new agreement it will be necessary to pay at least 4.80 dols. per day per man for this simple work, and in consequence the cost of concrete construction in buildings will be materially increased. Fortunately the very conditions of the new agreement will doubtless lead in time to its abandonment as impracticable. The large amount of concrete in buildings will demand the services of more bricklayers than can be furnished by the union, yet it is safe to say that the skilled men now in that organisation will not admit to its ranks unskilled men for the purpose of furnishing men for concretework alone. The *Engineering Record* considers that this condition cannot last very long. Moreover, how far the affiliations between the unions in the building trades will go to help the bricklayers make a strong fight for the agreement is a little uncertain, because a concrete building gives employment to an usually large number of carpenters in making and setting forms, and any reduction in concrete construction accordingly affects adversely the carpenters of the city.

### LOANS FOR BUILDING.

DURING the year 1905-6 the Public Works Loan Board advanced the sum of 27,050*l.* for providing dwellings for the working classes on the security of property, viz.:—2,000*l.* to the Bedlinog Building Club towards cost of erecting twenty-three dwelling-houses in the parish of Gelligaer, in the county of Glamorgan, repayable in ten years with interest at 3½ per cent. per annum; 4,800*l.* to the Cieracca Building Club towards cost of erecting forty-eight dwelling-houses in Gwladys Street, Dowlais, Merthyr Tydfil, repayable in five years with interest at 3¼ per cent. per annum; 5,000*l.* to the East End Dwellings Company, Ltd., towards erecting dwellings for the working classes in the parish of St. Matthew, Bethnal Green, with a frontage to Old Ford Road, repayable in thirty years with interest at 3¼ per cent. per annum; 8,000*l.* to the Twyn Carno Building Club towards ninety-one dwelling-houses in the parish of Bedwellty, in the county of Monmouth, repayable in eight years with interest at 3½ per cent. per annum; 4,250*l.* to the Tonypany Building Club, being the first advance of a loan of 4,500*l.*, towards erecting thirty-six dwelling-houses in the

parish of Ystradfydwg, repayable in sixteen years with interest at 3½ per cent. per annum; 3,000*l.* to the Victoria Building Club (Rhymney) towards erecting twenty-nine dwelling-houses in the parish of Bedwellty, in the county of Monmouth, repayable in six years with interest at 3½ per cent. per annum.

There were also loans secured on rates—10,737*l.* to the Salford Corporation, repayable in ten years with interest at 3½ per cent. per annum; 454*l.* to the West Ham Corporation, repayable in 40 years with interest at 3½ per cent. per annum. By the Education (London) Act, 1903, the liability of the London School Board for the repayment of loans advanced by the Public Works Loan Commissioners was transferred to the London County Council. A large proportion of these loans bear the same rate of interest (viz. 3½ per cent. per annum), and were made repayable within periods which would expire at various dates between the years 1908 and 1929. The Public Works Loan Board arranged with the County Council to consolidate all the 3½ per cent. loans into one account, with an equated period for repayment, the dates of repayment to be March 31 and September 30 in each year, and the period to expire on March 31, 1926.

In the Report for 1899-1900 it was mentioned that the Public Works Loan Commissioners were in possession of Newlyn harbour as mortgagees, that the undertaking was being carried on by a committee of management appointed by them, and that all arrears in respect of the Public Works Loan Board's loans had been wiped off. Under the capable management of the local committee the affairs of the harbour have continued to prosper; the trade, chiefly fishing, has greatly increased, and with it, of course, the revenue, and but for the fact that the existing arrangement has been attended by results so satisfactory to the locality and the public, this Board would probably before this have relinquished possession. Circumstances have now arisen which, in this Board's opinion, point to the desirability of this course being now adopted. The existing facilities at the harbour for landing and handling fish and merchandise are no longer adequate to the increased trade, and this Board having satisfied themselves that urgent need exists for the provision of additional accommodation by means of somewhat extensive works, including new wharfage, a trawl-fish market, a jetty, &c., have promoted a provisional order

under the General Pier and Harbour Acts, containing the necessary powers for the carrying out of the works, and constituting a new Board of Harbour Commissioners in place of the Commissioners constituted by the previous orders, who for some years past have ceased to be elected. This order now awaits confirmation by Parliament, and on this being done the Public Works Loan Board propose, in the absence of any unforeseen developments, to relinquish possession of the harbour.

### AUDITING OF BUILDING ACCOUNTS.

THE district auditor for metropolitan boroughs, in his report on the accounts of the Shoreditch Borough Council to March 1905, says:—"The long delay in the completion of the audit has arisen almost entirely from the failure to produce necessary vouchers for the payments made by the Council in settlement of contracts. In the case of the building of the Haggerston baths (65,924/.) and of the town hall extensions (23,473/.), and of the payments to the architects and quantity surveyors in regard thereto, the Council were not in a position to show that the sums paid were in accordance with the terms of the respective contracts. In one case the necessary vouchers were, after some correspondence, obtained by the town clerk; but in the other case, the town hall extensions, I was informed on April 19 last that, in view of the fact that the architect refused to supply the required vouchers without an undertaking to pay his charges, the Council had resolved that they could not obtain the papers, and left it to the auditor to exercise his statutory powers in regard to their production. The only voucher originally produced in support of the payment to the builder was a certificate signed by the architect. The contract itself contained numerous and elaborate provisions in regard to the manner in which this payment should be calculated, but there is no evidence that any information as to how the total was arrived at, beyond verbal explanations, was given to the Council or its committee at the time of payment. I was compelled to require the production by the architect of the papers relating to the settlement, and after considerable correspondence he eventually decided not to let the question of my right to do so be taken into Court,

and attended with a large amount of papers. A long time had elapsed since the settlement, and a number of papers were missing. It was only by the help of a rough pencil note that we could find out approximately how the total was arrived at, and several large items included in the calculation were entirely unsupported by detail, e.g. 'additions to tower, 2,620l. 7s. 5d.' It was impossible to verify the correctness of the settlement from this material, but I am of opinion that Mr. Hunt did all he could to explain the matter, and a careful examination of the papers produced left me with the impression that he had exercised more than ordinary care in adjusting the provisional sums. As to the correctness of the claim for commission upon extras and omissions, amounting to 14,651l. 5s. 9d., I have no means of judging, as neither the architect nor the quantity surveyors could show how the total had been arrived at. The charge has been passed upon a sworn declaration of its correctness recently made by the quantity surveyors. It is my duty to point out that the expenditure referred to above has not been duly vouched. It is, in my opinion, important that evidence should be submitted both to the Council and to the auditor sufficient to show that the terms of the contracts have been observed in calculating the payments. I would add that a considerable experience of the matter has proved to me that it is in the settlement of contracts more than anywhere else that loss will arise from a neglect of the regular system of supervising and checking the correctness of the charges."

### BUILDERS AND SURFACE DRAINS.

A CASE was decided on Monday by the stipendiary magistrate, Birmingham, which suggests the legal difficulties and offences which can arise out of the laying down of surface drains. Mr. Edward Airey, builder, was summoned for constructing a surface water sewer on the east side of a new road. The defendant at the outset pleaded guilty, but he was again summoned for constructing a similar sewer on the other side of the road.

Mr. Maddocks, barrister for the defendant, contended that, in the first place, the matter was *res judicata*, in the second there was no by-law relative to surface water, whilst

thirdly it was not a continuing offence. Defendant adopted a drainage scheme of his own and that was an offence, but the adoption of that scheme and the carrying of it out was one offence. The second sewer was merely part of the whole scheme and was covered by the first summons, whereas the Corporation was asking that defendant should be punished twice for the one offence. Until 1903 the Birmingham Corporation had no power to make any provision for separate sewers. In 1903 they obtained power to acquire two separate sewers, one a sewage sewer and the other a surface water sewer, but when the by-laws under which the summons had been taken were made the Corporation had no control of surface water sewerage.

Mr. Prideaux, for the Corporation, said they had had control of surface water since 1848.

Mr. Maddocks went on further to contend that the by-laws as they stood were not applicable.

The stipendiary reserved his decision.

On Monday, according to the *Birmingham Daily Post*, the stipendiary, Mr. Morton Brown, explained that two summonses had been taken out under by-law 4 (e) of the building by-laws (according to the numbering of the by-laws in the small book in use in the trade) charging the defendant with carrying out works for the drainage of a new street off Warr Lane, Harborne, otherwise than in accordance with the requirements of the city surveyor, the fact being that he laid down a small drain on each side of the road, and connected the two for the purpose of draining the surface water into an open water-course behind the houses on the east side of the road. The first summons was heard on March 20 last, when the works were in progress on the east side of the road. The defendant then pleaded guilty, but at counsel's request the matter was adjourned in order that he might remove the cause of complaint, and so avoid a penalty. There had been many further adjournments from time to time in order that the defendant should put things right, but he had done nothing. On the contrary, it was found early in August last that he was carrying out similar works on the west side of the road. On August 17 the Corporation served the defendant with a notice that he was committing this further offence. The works, however, continued, and another summons was issued, being made returnable for September 29. The two

summonses were further adjourned until October 1 and then until October 8. No friendly conclusion being arrived at, the case was argued on that date, and he (the stipendiary) reserved his judgment. He pointed out that counsel had contended that the works on the west side were a part of the same scheme commenced on the east side, but he pointed out that the two works were carried out at distinct and different times, and although they might be part of the same idea defendant had in his mind he had carried them out within the meaning of the by-law on two separate occasions, and there were therefore two offences; secondly, the Corporation had asked for a continuing penalty from August 17, the date of the notice of the second offence. The by-law provided for the infliction of a continuing penalty of 40s. per day after receipt of a written notice from the Corporation. To this an objection was raised that the summons itself should have charged the defendant with committing the continuing offence. The stipendiary held that the principle laid down in the case of *James v. Wyvill* was good law, and overruled the objection. A further point raised on behalf of the defendant was that, as the Corporation was only given power in 1903 to insist upon a separate sewer for surface water, and as the by-laws were passed in 1876, they did not apply, and consequently there was no offence. He (Mr. Morton Brown) held that, having regard to the language of Section 65 (2) of the Corporation Act, 1903, he must overrule that objection. Apart from the section, it appeared to him that the city surveyor might possibly insist on two sewers in the road, as he was given a discretionary power in the by-laws to lay down the mode of drainage. In regard to the penalties, the stipendiary said he had to consider the behaviour of the defendant in the matter. The case had been adjourned from time to time to meet the defendant, and the Court and Corporation had shown him every possible leniency. The Corporation had met him and his surveyor more than once to explain matters, and had twice already reduced the depth at which it required the sewers to be laid. That prescribed was the minimum depth that could be permitted. The defendant had foolishly and obstinately refused to carry out the requirements of the Corporation. He (the stipendiary) must fine him the maximum amount of 5l. on the first summons and a similar amount on the second, in addition to 2l. per day for the

period of fifty days since August 17. These fines would amount to 110*l*. He would also have to pay the Court costs.

Mr. Prideaux applied for professional costs, pointing out that the extra cost entailed in the case owing to the defendant's obstinacy ought not to fall upon the ratepayers.

The stipendiary granted 5*l*. 5*s*., which brought the total amount of fines and costs to 121*l*. 4*s*. A stay of distress was granted for eight days pending the defendant's decision as to whether he would ask for a case to be stated on the points of law raised.

### THE PAINTING TRADE.

At the Conference in Leeds of the National Association of Master Painters Mr. E. H. Matthey (Birmingham) read a paper on "The Present-day Conditions of the Painting Trade—Commercialism and Craftsmanship." Dividing his subject into four sections, he first touched upon the education of workmen. In no business, he said, was a working knowledge of the trade more necessary than among master painters, no trade where the personal factor was more needed. A master painter should be a draughtsman, colourist, naturalist, chemist, organiser, mathematician and a gentleman. Were not the workmen what commercialism had made them, and did not the employers too often regard them as "hands," and not men? True commercialism, he went on to say, would insist on the best production. Technical schools and schools of art had been provided by many municipalities, and would do good if rightly used. But he was convinced great sums of money were wasted, rates and taxes being paid away in a shoddy form of instruction, largely, if not entirely, because commercial men had not realised that they should interest themselves in the work carried on. Mr. Matthey went on to suggest the institution of local competitions and exhibitions of work, while local lectures might be given to masters, men and the public. They grumbled, he said, because in competitive work public bodies and private clients too often considered the cost first and the quality afterwards. Cheap labour was one cause of that state of affairs, and he held it should be the business of trade unions to see that capability should be a condition of membership. He held that they should demand of trade unions that they should give them

capable men. There was only one honest way of pricing work, which was that each job should pay its own way. There must be competition, but why should there be this game of beggar-my-neighbour? Mr. Matthey proceeded to speak of the quality of work, and urged that the public got better value out of an accomplished craftsman than out of a man whose chief asset was ignorance. Public authorities, he held, could do very much to prevent the present system of laying layer upon layer of paper on the walls of dwelling-houses and covering up the dirt and germs of disease. There was a tendency, too, in some quarters to use showy ready-made ornamentation, but he believed the average home was more artistic in its decoration than formerly. This necessitated on the part of the painter an increased knowledge of restraint, fitness, selection and method, because the simple work was often more difficult to perfect. Speaking with reference to the question of the status of the trade, Mr. Matthey remarked that perhaps they might have an uneasy feeling that they were a despised community, looked upon as a necessary evil, to be called upon to pursue the more arduous portions of spring cleaning. But they must be honest traders and show the possibilities of honest work. Theirs was a handicraft of great possibilities, not merely an occupation, and they must make their work express character, and thoroughness and honesty.

Mr. Johnson (Leicester) suggested that Mr. Matthey's paper should be printed and distributed to the members of the local associations, as it would do a great deal of good.

Mr. Harrison (Plymouth) said there would be no hope for the raising of the painting trade unless they faced some of the moral issues that lay before them. They were not so thwarted by untutored workmen as by immoral workmen. Some of the best craftsmen he had had for the duty of "captaining" had been men who had turned out most disappointing and the greatest failures, because they lacked moral principle. Every one of them as employers had a certain bias against trade unions. He was not an enemy of them, but he had a lurking fear of them, and believed that their salvation lay in a friendly acknowledgment of, and a real practical association with, trade unions.

Mr. Brown, of Newcastle, proposed a vote of thanks to Mr. Matthey for his paper.

This was seconded by Mr. Breakspeare and carried.

## Are you interested in WOOD PRESERVATION?

Apply to the ANTHROL Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of ANTHROL and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. ANTHROL does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, ANTHROL, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

# GOOD ADVICE.

Architects, Contractors, and others are recommended to journey by the

# GREAT CENTRAL RAILWAY.

They will find it

## RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 50 per cent. off ordinary fares.

Awarded First Prize Medal, Adelaide Jubilee Exhibition, 1887, and Sydney Centenary Exhibition, 1888.

COOLEY'S PATENT

## DOUBLE DOWEL-PINS.

By this system each Block is securely fastened to its neighbour, and by means of the double-grip of each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.

For Wood-Paving purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of vibration.

FOR PARTICULARS APPLY—THE

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.
